Message to Our Customers

We wish to thank you for making 1926 a real "GLAD" year to us. We have deeply appreciated your loyalty and kind patronage, and hope to serve you even better this season than we have done before. As we open our new year's business, we look back on 1926 as a year of triumph. Once more, at the big midwestern gladiolus show, held in conjunction with the Iowa State Fair, we came off with flying colors, having won a long list of prizes. Included in these was first prize for the largest and best collection of named gladiolus. Eight first prizes were awarded us for large baskets and floral pieces, beside many more on individual classes. Those of you who saw our display will remember it with pleasure, and will be ready to give us your further patronage. That you may be better able to handle the bulbs, we are giving you the following instructions, which we hope you will find helpful.

Culture of Glads

Gladioli are very easy to grow and will do well in almost any ordinary garden soil. If planted in the richest place in the garden, and given plenty of sun and moisture, they will, however, repay you with extra large blooms and gorgeous colors.

To obtain a continuation of blooms during the greatest part of the season, it is advisable to plant at intervals of ten days, from the middle of April until the end of June.

Plant the bulbs 4 inches deep in heavy soil and 5 or 6 inches deep in light soil. To get your soil in good condition it will be necessary to spade deep and pulverize thoroughly. It is preferable to work in stable manure in the fall, if possible. If not, it is advisable to use fertilizer or bone meal in the spring, such as is used for growing potatoes, being careful to mix the fertilizer well with the soil so that the bulbs will not come in direct contact with it.

Many people make the mistake of planting the bulbs too shallow, making it necessary to stake or tie up the flowers during the blooming time. This will not be necessary if our instructions for deep planting are followed.

We shall be very glad to have you visit our fields during the blooming season. Our fields are at their best during the last of August and up to the middle of September.

We shall also be glad to furnish you with any other information you may require to grow Gladioli successfully.

PLANTING—Gladioli may be planted any time the ground is in good condition. Large bulbs should be planted five to six inches deep. Smaller bulbs less, about three inches for quarter-inch. The roots go down; therefore, ground should be well pulverized and enriched below as well as above the bulbs. No fresh manure should come in contact with the bulbs.

They should have full exposure to sun and will not give best results if planted in the shade or where the roots of trees or shrubbery sap the ground. Do not expect to get good results where you could not raise a good hill of potatoes.

CULTIVATION—Cultivation should be constant and may be begun by raking before the shoots appear. Do not let a crust form around the plants. Gladioli are good feeders and will utilize large amounts of old manure worked into the ground through the season. The new bulbs and bulbets are formed after blooming, so cultivation should be continued for five or six weeks after bloom is cut. If water is given, a thorough soaking once a week is better than a little once a day. A mulch of lawn clippings or other fine material helps to keep the ground cool and conserves moisture but is no substitute for cultivation.

Cultivation kills weeds. Proper cultivation conserves moisture. Cultivation enables the air to change the soil to plant food. Do not forget to cultivate.

DIGGING—After tops are killed by frost, bulbs should be dug and tops cut close to bulb. Dry for one or two days in the sun and separate bulbets from bulbs. Bulbs should be kept cool and dry in ventilated crate or basket. They will keep well in conditions favorable for potato storage. Where ground does not freeze, bulbs may be left in, but is not recommended to do so.

BULBETS—The little offsets found around the parent bulb at digging time are called bulbets or cormels. They are always true to the parent bulb, and bulbs that please you should be marked and staked that the increase may be saved separately, and your stock propagated from these. Contrary to many people's notions and some published articles, gladioli do not mix by being planted together and do not run out. A mixture planted for several years will change its proportions by natural division and death of less hardy varieties.

Bulbets should be kept in dry earth or sand during winter. Plant 100 to 200 to the foot in a trench the width of a hoe and cover two to three inches deep. Ground should be in the best possible condition. Soaking twenty-four to forty-eight hours in tepid water before planting improves germination. Sixty per cent is considered fair germination if planted unpeeled.

Please Note

REMITTANCE—May be made by Express Money Order, P. O. Money Order, certified check or cash.

TERMS—Our terms are cash with order. On orders amounting to \$10.00 or more, 25 per cent will hold order till shipment is requested. We cannot, however, hold orders after May 15th.

DISCOUNT—A discount of 10 per cent will be given on orders amounting to \$100.00 or over.

SPECIAL OFFER—A membership in the Iowa Gladiolus Society, including dues for the year 1927, will be given as a premium with your order amounting to \$6.00 worth of bulbs, selected from our list. Please make request for same when you order, if desired.

MINIMUM ORDER—No order will be accepted for less than \$3.00.

SHIPPING—Unless given specific shipping instructions we will ship orders by express or Parcel Post as we think best.

Bulbs quoted singly or by ten are sent anywhere in United States or Canada prepaid. Larger quantities are quoted F. O. B. Des Moines, Iowa.

ALL PRICES ARE NET FOR QUANTITY STATED.

If we are out of size ordered we will give a larger quantity of the same variety, in the next smaller size we have in stock, unless otherwise requested. If entirely out of a variety ordered, we will substitute to the best of our judgment unless otherwise instructed.

All orders are accepted subject to prior sale or other contingencies beyond our control. If we do not have the full amount ordered, we will ship what we have at same relative price.

We exercise the greatest care to furnish only highest quality bulbs, but give no warranty, express or implied, as to description, quality, productiveness or any other matter of any bulbs sent out, and will not be in any way responsible for the crop other than replace bulbs untrue to name. Orders are accepted only on these terms.
