WHY YOU SHOULD SET PECANS

1. For beauty. There is no tree in the South that gives a shade quicker, and is more ornamental to behold than a pecan.

2. For pleasure. During the cold winter evenings when the coals are aglow, gather the family around the open hearth with a bowl of paper shell pecans and enjoy America's greatest food.

3. For Profit. Thousands of trees all over the South are bringing an annual income of \$50. each. A great many are doing better. A few trees in a very few years will pay the taxes and insurance. Twenty acres will retire you in fifteen years on a comfortable income.

Paper shell Pecans are the highest priced nut in the world. Land that will grow hickory trees and cotton will grow pecans. There is no other spot in the world that is growing pecans. The South with a monopoly on pecans is only producing about a pound of papershell pecans to every five people in this country. We have never been able to produce enough to divide with Europe and the rest of the world. The marketing possibilities are unlimited. The growing of papershell pecans is an infant industry that we believe offers the greatest agricultural investment that this generation can make. It is just as easy to raise 1,000 pounds of paper shell pecans as it is to raise 500 pounds of lint cotton; therefore, this makes pecans a four to one better proposition than cotton.

First cost is practically the only cost when you grow pecans. Pecans are the easiest of orchard crops to grow. Complicated handling, expensive spraying and constant pruning are not required by pecans. Set 12 to 17 trees to the acre, that is from 50 to 60 feet apart each way and go right on raising crops of cotton among the trees for the first six or eight years. After then you won't need cotton.

A pecan grove pays while you live, it will pay your children when you are dead, and your grandchildren will enjoy your monument because it will give them an annual income for life.

A pecan grove doubles in value every 4 years until it comes in full fruitage in 16 years. Convert some acreage into compound interest and watch your dollars grow.

DO IT NOW!

Thank you.
