1928 BULB LIST

Do you like flowers? Do you appreciate color? You should have enough Gladioli so you can have some in the house throughout the season. There are many forms and endless color combinations. If cut when the first bud opens the flowers will all open and will last from 8 to 14 days. 100 bulbs can be planted on a space 8 by 10 ft., and ought to give 125 spikes over a period of four to ten weeks or longer, and then you have your bulbs to plant another year.

Gladioli do not require special care or culture. Plant bulbs three to five inches deep, depending on size of bulb and nature of soil, deeper in lighter soils. Place from five to eight inches apart in row, according to the space you have. They will do well in any good soil if kept free from weeds. Do not plant in shade.

Prices quoted are for first size bulbs. Smaller bulbs will be sent for half price if so ordered in lots of one dozen or more. Postage prepaid. Prices are for one bulb. One dozen for ten times the price of one. Will ship when danger of freezing is over.

Figures after each variety indicate days from planting to blooming in 1927.

Introducing

RIP VAN WINKLE

This is the name of a new variety I am offering for the first time this year. Originated in my garden several years ago, and thoroughly tested since.

A medium sized flower. Ground color is Roman Red. Each of the three lower petals carries a blotch the same color and shape as in Pendleton, but down the center, and reaching nearly to the tip of the petals is a pencil stripe of greenish yellow. 17 to 21 flowers on a spike. A very strong grower, early bloomer. Has been tested two years for forcing under glass and is perfectly satisfactory.

\$1.00 each. \$10.00 per dozen. Prices on smaller bulbs and bulb-lets on application.
