Dependable Seeds—Sure Crops

TO OUR FRIENDS AND CUSTOMERS:

It is with pleasure we issue our annual illustrated catalog. As it goes to all our old and satisfied customers we also hope it will make us many new friends and likewise more satisfied customers.

The greater part of our seeds are grown by the largest and best producers in this country and Europe, in sections best adapted by long experience to produce the best seeds for our climate.

Some people are at a loss to know what varieties to select, thus I would say, order the variety that is underlined or given special prominence.

The war garden has gone but the American home garden has come to stay. We are devoting more space to flowers, shrubs and plants because of this. Also note where quantities are wanted larger than the sealed 5c and 10c packets, consult our schedule of Bulk Seeds on page 18.

Remember late buying is trying to you and more difficult to our over-busy staff, thus **ORDER EARLY.**

Hoping to have the pleasure of your orders, which will have our best care and attention, I am,

Very respectfully,

Pres. and Gen'l Mgr.

Mr. Root has devoted the last 36 years in Colorado to Seed Growing and Selling

ORDER EARLY

It is our purpose to fill all orders soon as received; however, during the rush season—March, April and May—there are unavoidable delays. Our patrons can help us very much in overcoming such by anticipating their wants in seeds and ordering **EARLY.** Get ready for your busy days.

If your order includes goods where all are not ready at same time we place it on file that each item may be taken care of fast as ready. We eventually complete your order or otherwise write you.

POSTAGE PREPAID

On all Vegetable and Flower Seeds, Bulbs, Plants, etc., unless otherwise stated. The U. S. Mail delivers our seeds direct to your door. For Grass, Grain and Field Seeds, also other goods that are not priced "prepaid," see Parcel Post Schedule.

ABOUT PRICES

Supply of standard varieties is reasonably abundant this season. However, cost of production is still excessively high, notwithstanding we retain our very low prices, especially for Garden Seeds in suitable quantities for Market Gardeners as priced on page 18.

NON-WARRANTY

While we take all the care possible in selecting our seeds and we believe they will give satisfaction, we cannot guarantee them. Good seeds do not always make good crops owing to weather, heat, cold, insects and other reasons beyond the control of the planter and seedsmen. We, therefore, cannot guarantee the crop nor give any warranty, expressed or implied, as to their growth, description, quality or productiveness; and we will not be in any way responsible for the crop. If the purchaser does not accept the goods on these terms they are at once to be returned in the original, unbroken package and the purchase price will be refunded. If the seeds do not prove as represented by us we will replace with more or other seeds to same value.

TERMS

Cash with order. Post Office Money Order, Express Order or Exchange on Denver, or small amounts in clean postage stamps. Better not mail coin. If we cannot fill your order we refund the amount. Please do not ask us to ship C. O. D. unless you remit at least one-third of the amount of order. It always costs you extra for goods to come that way.

ERRORS

Yes, we make them. However, to help overcome such we now use extra precaution and care by using a double checking system, which requires two clerks. Be sure you write out your order clearly, by using a line or paragraph for each article wanted. However, in the rush of busy days, long hours and interruptions, errors will occur, in which event write us in full that we may make the adjustment to your entire satisfaction.

Be very careful to write plainly your postoffice, state, and be sure to sign your name. Please use our printed order blank.

TESTED SEEDS

We test all our seeds for purity and germination and have a large electrically-heated tester, approved by our State Seed Laboratory.

FREE—A pair of Canvas Gauntlet Gloves given free with orders for \$3.00 or more of Vegetable or Flower Seeds from this catalog, if asked for when ordering. State whether ladies' or gentlemen's size.

For Jerusalem Artichoke tubers, write us.

ASPARAGUS

One ounce for 60 feet of row.

Asparagus is a slow grower, requiring at least three years to mature from seed, and is therefore not generally recommended to the small gardener. Usually unless you go into asparagus raising on a large scale, that you get the roots in preference to raising from seed. Cultural leaflet on request.

WASHINGTON RUST-PROOF. Is green with pinkish tint at bottom. Our seed is direct from pedigreed stock which is practically rust-proof. Last season's planting produced remarkably large growth. This will eventually supersede all other varieties. Pkt., 5c; oz., 15c; ¼ lb., 50c; lb., \$1.50.

EARLY GIANT ARGENTUILL. True green, best, and most tender. Pkt., 5c; oz., 10c; ¼ lb., 25c; lb., 75c.

Washington Rust-Proof Asparagus

BEANS, GARDEN--DWARF

One pound will plant 100 feet, 60 pounds an acre.

Bush Beans should be planted about the last of May. The furrows should be at least two feet apart. A pound of wood ashes should be hoed into every ten feet of furrow, leaving the furrow not more than an inch deep. Plant the Beans four inches apart in the furrow and cover them with an inch of soil. They come up in from 8 to 10 days, and the plants mature in from six to nine weeks. Thorough tilling is essential; the ground must be kept soft. Avoid handling or touching the vines in damp weather.

When Bean Beetles trouble, pick off all you see, then use Arsenate of Lead.

BEETS, TABLE VARIETIES

Two ounces for 100 feet of drill.

The rows in which Beets are planted should be a foot apart. Along each row, in a furrow or small trench one inch deep, drop the seeds one or two inches apart; then cover with fine soil, pressing down firm. Beets should be planted some time between the first of April and the first of June; they will be from a week to a month coming up, according to the weather. When the plants are about four inches high, thin out to from three to four inches apart. The plants pulled up can be planted elsewhere. Strip their outside leaves off, and put the plants in holes deep enough to keep the roots from turning up. Beets should be ready for eating in from eight to twelve weeks. Keep the ground loose and well tilled.

CABBAGE

Three ounces seed to 100 yards of row. One ounce will produce 2,000 plants.

The best way to raise Cabbage in the small garden is from the plants. Cabbage requires an abundance of both moisture and tilling. It is also advisable to enrich the ground if possible. Fertilizer may be conserved by placing a small amount under each hill before plants are set. It will pay you to set out both early and late varieties. Set early Cabbage 18 inches apart in rows and two feet apart between rows. Late Cabbage two feet apart in rows and three feet apart between rows.

If cabbage seed is treated with SEMESAN it will help lessen the root rot.

Danvers Half Long

CAULIFLOWER

One ounce will sow a bed 40 sq. ft. and produce about 2,000 plants.

All our Danish Seed is growers' first quality sifted seed, thus higher cost. For the small garden we advise getting Cauliflower plants in preference to growing from seed. The cultivation is the same as that of Cabbage, except that Cauliflower favors even a moister soil. Proper tilling and watering affect this very much. Tie the long leaves together over the growing head to keep it white. Plants ready in April and May.

EARLY DANISH PERFECTION SNOWBALL.

"Dependable Grade." Positively nothing better for earliness and quality; produces fine white heads. The outer leaves are short, allowing the plants to be set closer together than most varieties. 18 to 20 inches being far enough apart. **Pkt., 15c; ¼ oz., 75c; oz., \$2.00; ¼ lb., \$7.00; lb., \$24.00.**

CELERY

Three ounces of seed to 100 yards of row. One ounce will produce 7,000 to 10,000 good plants.

Celery, to be raised from the seed, requires almost expert care. It is better for those who are not practical gardeners to buy Celery plants. These are set out about the first of June, a foot apart, and mature along the last of September or during the first two weeks of October. Celery is by nature a marsh plant, and the soil about it must be kept wet, especially when the plants are young. When they get to be about four inches high, shear off the tops; it makes the plant more stocky. As the plants grow, gradually draw the earth up around them to keep the stalks white; by the end of fall all should be covered but the tops. A heavy paper wrapped around each stalk will insure tender, white plants. Keep the ground well loosened and cultivated; this is imperative on account of the moisture required by the plants. Celery is planted in rows that should be at least three feet apart. About 30,000 plants to the acre.

SEMESAN will help to increase your celery crop.

GOLDEN SELF - BLANCHING.

"Dependable Grade." French grown seed. The choicest sort of delicious celery; produces large bunches with broad, heavy stalks which blanch into a rich, appetizing, golden-yellow, making this

Golden Bantam Sweet Corn

CORN, SWEET

One pound will plant 100 hills. 10 pounds an acre.

Corn should be planted to the north of the garden, so as not to shade the other crops. It should not be planted in a very small garden unless it is the only crop to be raised. It needs shallow but continual tilling. Just after the middle of May is a good time to plant. The rows should be three feet apart, the kernels sown three together every six inches in the furrow. When the Corn is well started, pull out all but one stalk to each place. Keep the little shoots or suckers cut from around the roots. The ears are ready to pick when the silk is brown and the kernels on the tip are plump. Do not molest the ears of growing corn; it is liable to spoil them.

SEMESAN TREATMENT on your Sweet Corn Seed will increase germination. **"Dependable Grade."** Select strain of exquisite quality; when ready to use is of a bright golden-yellow color. It can be planted very early, is hardy. The small stalks can grow very closely together in the row and will produce 2 to 3 ears each. We especially recommend it on account of its ability to stand the cold weather of spring. $\frac{1}{4}$ lb., 10c; $\frac{1}{2}$ lb., 15c; lb., 25c.

EARLY MAYFLOWER. Unquestionably the earliest white kernel variety in existence. Ears are 8 and 10-rowed, 5 to 6 inches long, average 2 ears on a stalk, growing only 4 to 5 feet high. **Pkt., 5c; $\frac{1}{4}$ lb., 10c; $\frac{1}{2}$ lb., 15c; lb., 25c.**

LETTUCE—ALL SELECT

One ounce for 200 feet of row. One ounce of Head Variety will plant 400 feet of row.

Lettuce will stand slight frosts, and is therefore one of the first things to plant, if the ground is well prepared; early April is not too soon. It can be planted up to the middle of July, and many prefer the later plantings. Place seed in trench half an inch deep, cover with fine soil to top of the trench and press the soil down. The plants should be up in about a week. If head varieties are wanted, thin out to four or five inches. The heads are usually well formed in ten weeks and should then be cut or they will rapidly go to seed, especially in hot weather. The rows of lettuce should be at least a foot apart. The quality of the lettuce depends on the tilling—keep the hoe busy. A special cultural leaflet on Lettuce Growing in Colorado free.

TOMATOES

One ounce will produce 1,500 plants; $\frac{1}{4}$ pound to transplant for one acre.

Tomatoes are planted indoors in a window garden about the first of March. When the third leaf of a plant has formed, put the plant into a three-inch pot or box. After all danger of frost is over the plants may be set in the ground. Do not plant Tomatoes within three feet of any other crop. Dig holes three feet apart and deep enough to allow placing the plant an inch or two deeper than it was in the pot. Cover the top of the pot with your fingers, holding the stem of the plant between them; then turn the pot upside down, tapping it with a trowel or other tool, when the plant will easily come out. Place it in the ground, pressing fine earth around it; if the earth is dry, water it as soon as the plants are set. Some people, before transplanting Tomatoes, put a narrow ring of heavy paper loosely around the plant, just at the top of the soil, to keep off cutworms. June 1st is the usual time for transplanting in northern latitudes. Tie the growing plants to stakes. We will have plants ready in May and June.

Tomato Seed should be carefully treated with **SEMESAN POWDER** to prevent wilt.

MARGLOBE. A new variety brought to popularity by seed distributed from Washington. Is purplish-red, smooth and nearly round. Slightly later than Earliana but larger. The bearing season is long, thus especially suitable for home garden. In New Jersey they claim nothing better in tomatoes. A truly wilt-resistant variety. **Pkt., 10c; oz., 60c; $\frac{1}{4}$ lb., \$1.75.**

SEED CORN

SUITABLE FOR WESTERN PLANTERS

8 to 10 pounds will plant an acre. Prices for Corn do not include postage.

Probably no other field crop is more sensitive to acclimation than Corn. Years ago we learned by experience that corn responds more quickly to selection and acclimation than had previously been considered; thus it is that we now insist on Colorado-grown seed. The higher altitude in which seed matures the better it is for our Colorado use. Accordingly we have selected for purity in type, productiveness and hardness.

Prices for the following select strains of Field Corn: 1 lb., 15c; 2 lbs., 25c; 10 lbs., \$1.00; 25 lbs., \$1.50. Postage extra.

For larger quantities, see Pink Sheet price current.

MINNESOTA NO. 13. A truly very desirable variety of Yellow Dent. The ears are of handsome appearance, being 16 to 20-rowed, wedge-shaped kernels, growing closely on the cob from butt to tip. Every kernel a good one. The ears are eight to ten inches long, averaging two on a stalk. Matures readily in ninety days; if unfavorable conditions, a hundred days will usually mature it. Is proving itself an excellent drought-resisting variety. We predict that more Minnesota No. 13 will be grown in Colorado than any other variety.

COLORADO YELLOW DENT. For years this name has been applied to a good grade of Yellow Dent corn that has been grown in Northeastern and Eastern Colorado. The ear is longer than Minnesota No. 13 but not as large, either in kernel or cob. Its chief recommendation is hardness and reasonably sure cropper.

COLORADO WHITE DENT. Originated near Parker and has been very successfully cropped on the Divide for years. By all means the best White Dent corn for Colorado, being 12 to 16-rowed, large, broad kernel.

WHITE AUSTRALIAN. A flint variety, exceptionally hardy and early. Long ears, 8 to 10 inches, usually 8-rowed. Will mature where others fail. Especially desirable on very dry land and high altitudes. The old reliable for dry-land farmers.

"Dependable Grade" Flower Seed

WE PAY POSTAGE ON ALL FLOWER SEEDS

The flower seeds listed in our catalog are especially selected for hardiness and durability in the territory where this book is sent.

There are none of the undesirable varieties. When you order seeds from this book you can rely on getting only **dependable seeds** of merit.

For your further guidance and to make the results of your efforts more certain you will find cultural directions on the packet.

Flowers are usually known as **Annuals, Biennials and Perennials.**

Annuals bloom and ripen seed the first year and then perish.

Biennials do not generally bloom the first year and are in perfection the second year only.

Perennials flower several years in succession, many blooming the first year from seed sown early and are used for permanent plantings.

For price list Perennial seeds and plants, see pages 26 to 31.

Hardy Perennials and Biennials may be sown either in early fall or spring and require no protection through the winter. **Hardy Annuals** may be sown either in late fall or spring. They often self-sow in the fall.

Half Hardy Annuals, Biennials and Perennials cannot be sown in open ground until warm weather; they may, if desired, be started early inside and transplanted afterwards. The latter two need protection in winter or may be carried through in coldframes or greenhouses.

Cultural Leaflet on Annuals Free When Asked For

In this list we include both annuals that bloom, then die, and several tender perennials that bloom freely the first year.

ASTERS

The Aster is the queen of the summer blooming plants. Unlike many of the old-time flowers, the Aster has progressed and improved by cultivation until many of the new varieties in their improved form bear such a striking resemblance to the Chrysanthemum that one can scarcely tell them apart. The long stem makes them desirable for cut flowers as the blooms last long in water. The popularity of the Aster is not due entirely to the flower, but to the ease with which they are raised. Asters thrive in any good soil, prepared the same as for a crop of vegetables. Any extra care taken in the preparation of the soil and cultivation is repaid by larger and more beautiful flowers. They require a sunny exposure and as well enriched soil. Sow in hotbeds, pots or boxes in the house in March and April, transplant 18 inches apart after danger of frost is past. The seed can be sown in open ground in May. We have the Bodger-grown seed.

If Aster Seed is treated with SEMESAN POWDER it will do much toward preventing wilt and plants dying just at blooming time.

Giant Branching (Improved Crego). Our stock is grown and carefully selected at the Bodger Farm where "Asters are King." They are improved to be very large, well branched, and on long stems. NASTURTIUMS

Few plants are so well known, useful or so rich in color as the Nasturtium. They surpass all other annuals in brilliancy of color and profusion of bloom. They being of easy culture, require a moderately good soil and a well drained sunny position. Will produce within a few weeks after sowing, until a hard frost comes, a profusion of brilliant colored flowers the entire season. The varieties offered below have been selected with great care from a very large variety of sorts as being the best and most distinct.

PANSIES

Pansies are too well known to require any description, as they are favorites with all. For best results you must start with a good strain. The finest Pansies are, as a rule, shy seeders, which accounts for the difference in the price of the various mixtures offered. Seed should be sown in hotbeds or boxes, then transplanted to open ground after hard freezing is over. If this manner of planing is followed, plants will bloom early the first season.

As soon as the plants are up and large enough to handle, they should be thinned out or transplanted to stand 9 inches apart in the rows. Thorough cultivation should be given from the start, as Pansies will not thrive when obliged to share the beds with a mass of weeds. It is a mistake to plant Pansies in the shade of a tree or building. An open exposure where the wind has free sweep over the bed is far better, and Pansies so planted are free from the long, straggling branches which produce few and inferior flowers. During dry weather the bed should be watered daily, and in extreme cases twice a day for the best results.

Pansies are successfully grown from seed even by the novice; however, we would recommend that where only a small bed is desired you get our full-blooming plants. Ready in April.

Giant Trimardeau. The Giant Flowering varieties are best for general bedding, are most hardy and bloom early and late. English grown seed, separate colors.

PETUNIAS

A garden without these favorites could hardly be called complete; there are few which equal them for effect. They commence blooming in July if sown outside in May, and continue to flower in great masses until destroyed by frost. Their culture is the most simple; any soil seems to suit them, while, of course, a good rich earth adds greatly to the richness of color. The various strains which we offer have been obtained from specialists, and we are confident that they will give satisfactory results. SWEET PEAS

SELECTED TESTED SEED

Sweet Peas, with their beautiful varied colored flowers, take the lead among the many different kinds of annual and perennial plants. Your flower garden will not be complete without them. There are many varieties which are identical and others which lack size, color or some other characteristic, which all first-class sorts should have. We offer herewith a list of varieties which have been carefully selected for their large size and marvelous colors, and every variety is entitled to a place in the front rank of Sweet Peas.

The seed should be sown as soon as the ground can be worked, in trenches 8 to 10 inches deep in a position fully exposed to the sunlight and air on both sides of the row. Cover with about one inch of soil, pressing it down firmly. As the plants grow, draw the soil to the plants until the trench is full. This method will give a long vine in the soil, which will make innumerable roots and gather nourishment and moisture through a dry spell. As soon as they are above ground, thin out to 2 to 4 inches apart to enable the plants to fully develop if you desire large flowers. They should be staked up either with branches of brush or stout stakes on which wire netting has been fastened. These should be at least 4 feet high. During dry weather water thoroughly and frequently. The flowers should be cut as often as possible to prevent the plants from running to seed which stops them from continuing to bloom.

Our special Cultural Leaflet on Sweet Peas is free when asked for.

A sprinkling of bone meal on soil in June is helpful.

Our prices have been greatly reduced and we pay all postage.

BURPEE'S NEW SPENCER SWEET PEAS

Flower lovers know that new varieties of Sweet Peas offered by Burpee are of merit, thus we offer the following:

Adorable. A new color in Sweet Peas. A delightful shade of clear salmon-cream on a cream ground, with a slight trace of bronze around the edge. **Pkt., 25c.**

Happiness. A delightful shade of coral-pink on cream. The wings are slightly deeper and shade to a rose-pink. A lemon blotch at the bottom. **Pkt., 25c.**

Brilliant Rose. A marvelous, new shade—glowing bright Tyrian rose with a suffusion of bronzy-rose, clear and sparkling. Distinct from all others. Usually four-flowered sprays. **Pkt., 25c.**

Silver Medal Strain Spencer Sweet Peas

OUR "DEPENDABLE" CHAMPION MIXTURE

Consists of the best named grandiflora varieties, also many Spencers, all mixed by us. This mixture is decidedly different from others. We buy separately many named varieties and trial-ground sorts to mix into this stock. There is positively nothing better in mixtures at the price.

Large packet, 5c; oz. pkt., 15c; 2-oz. pkg., 25c; ¼ lb. pkg., 40c; ½ lb. pkg., 65c; lb. pkg., \$1.25. All postpaid.

SPENCER VARIETIES MIXED SWEET PEAS—SILVER MEDAL STRAIN

Too much cannot be said in praise of the merit of this mixture. We arranged with Mr. Waller, a very extensive seed grower in California, to supply us stock from his Silver Medal strain, which consists of many standard varieties of Spencers. To this we added some separate varieties that there may be a well-balanced assortment of colors. All these make it far superior to these so-called mixed which are grown-mixed and only a few colors prevail. Our mixture is a very distinct class.

Liberal packet, 10c; oz., 20c; 2-oz. pkg., 35c; ¼-lb. pkg., 60c; ½-lb. pkg., \$1.10; lb. pkg., \$2.00. All postpaid.

To Insure Increased Yield and Early Production

EARLY FLOWERING OR WINTER FLOWERING ORCHID SPENCER SWEET PEAS

These are a distinct strain of Spencer type flowers that bloom fully three weeks earlier than other Spencers. The original purpose in breeding up these varieties was for winter blooms in greenhouses, which has made wonderful change in Sweet Pea culture indoors. It was soon discovered that these same varieties would do equally as well in our gardens by producing fine, large blossoms considerably in advance of other strains. We recommend them for garden culture as well as for florists indoors.

HARDY PERENNIAL PHLOX

This class of Hardy Perennials is of special importance in every flower garden. Succeeds in almost any soil and blooms through a long season. Our list covers a range of colors which is certain to please.

The best effects to be had with Phlox are produced by planting masses of each color, not less than six and even as many as two dozen or more plants of one color together. For example, a border of Phlox may be planted, beginning with palest pink and shading up to dark cherry, then pure white, and white with a red eye, and more white, then a quantity of red and again white at the end. If in another border the shades of purple are planted with occasional bunches of white, the Phlox will be the pride of the garden. Our roots are extra large, 2 years old, field-grown.

PEONIES—All Postpaid

The Peony ranks among the most popular flowers. The blooms come out very early and are seldom attacked by disease. Our roots are extra large. The most popular perennial for our home flower garden. Being perfectly hardy, one planting will do for a lifetime with suitable cultivation. Is strictly hardy and does well in most any location; however, responds readily to good rich, deep soil in an open sunny position. Be careful not to plant too deep, the best is for crown to be about 2 inches below the surface. Peonies seldom bloom the first season; however, if planted in fall they usually bloom the following season. Ground should be spaded deep and well enriched, as suggested in our free leaflet.

Don't worry about the black ants that often gather on the buds, they are seeking the honey which exudes from the bud, and do no harm. If the stalk wilts, remove it to check the fungus from spreading.

Mr. Harrison's book, "Peony Manual," tells all about peonies and costs but 25c, postpaid. Our Special Cultural Leaflet, "Peony Pointers," free with orders if asked for. Our list contains varieties all distinct, suitable for Colorado culture.

Gladiolus—Postpaid

This very attractive flower has grown into popularity with marvelous rapidity. All lovers of flowers find a suitable space for many of the wonderfully distinct varieties. You can not afford to be without a liberal planting.

The Gladiolus are the most attractive and useful of cut flowers of all the summer flowering bulbs. The long graceful spikes that carry fifteen to twenty buds may be cut soon as the first lower buds show color; then kept in water each successive bud will develop and thus prolong the blooming many days. No other flower is thus equal, nor as easy of cultivation.

The planting season starts in April, and continues until in June, at intervals of two weeks, you thus have flowers from late July until frost time. Best results are obtained in a sunny position and placing the bulbs fully six inches deep. Water freely.

Our present list gives you the very cream of quality and merit. Our bulbs are large Colorado-grown—full of vigor.

Cut the flowers late in evening or early in the morning, not during the heat of the day. Plunge the ends of the stems (an inch or two) in hot water for a few minutes, being careful to hold the blossoms to one side so they will not be injured by the rising steam. Then place in vase of cool water.

The New Red-Leaved Japanese Barberry

Snowball

New Red-Leaved Japanese Barberry

IT IS only once in a lifetime that a really worth-while, outstanding novelty in hardy shrubs is introduced, and in this new Barberry we have such a plant.

It is similar in all respects to the green-leaved Japanese Barberry which is so popular for mixing in the shrubbery border, as single specimens, or for planting in clumps on the lawn, as well as for foundation plantings and for hedges, but the foliage of this new variety is of a rich, lustrous, bronzy-red, similar to the richest red-leaved Japanese Maples. This new Barberry becomes more brilliant and gorgeous throughout the summer, and in the fall its foliage changes to vivid orange, scarlet, and red shades. In this coloring it is unequalled by any other shrub and is followed by the same brilliant scarlet berries common to the type, which remain on the plant the entire winter.

All that is required to develop its brilliant coloring at all seasons is that it be planted in full exposure to the sun.

Our stock is two years old, direct from introducer, Henry Dreer. Price, each, \$1; 6 for \$5; not prepaid.

About Berries and Small Fruits

These varieties are all of established merit and very suitable for our Western planters.

Special Cultural Leaflet on Small Fruits free. Our stock is all examined by State Inspectors.

We do not claim to grow this stock. We do, however, claim to have it grown for us by very responsible established Nurserymen who are honest in giving us the best they can produce.

We have excellent facilities for supplying goods in this line. Let us book your orders early and ship the stock as wanted. No extra charge for packing.

ABOUT GUARANTEE AND REPLACEMENT

While we cannot guarantee every plant or root to live, we do guarantee that each is in good condition when packed and shipped. Part of this risk is yours in giving proper care and culture. If ever there is a fault you think is ours, write us frankly; we will do our part. We must have our customers satisfied.

So much depends on the care in protecting the roots from exposure, delay in planting, careless planting, unfavorable weather conditions, thus consideration on purchaser's part will show that to replace all losses is injustice to us. Thus when there is an actual loss we replace at **Half Price**.

"Pride of Denver" Everbearing Strawberries

Strawberries

We pay postage on Strawberry Plants at these prices

Strawberries are a hardy plant; they do well in almost any soil or climate and are almost entirely free from disease and bugs. Buy one-year-old plants and get them into the ground as soon as you can. Before planting, dip the roots in water. Set the plant with the crown or bud at the surface of the ground. April and early May is the best time to set the plants. If late May or June the leaves should be trimmed. We do not recommend fall planting.

Everbearing varieties are now the leading kinds—in fact, so much can be said in favor of varieties that produce all through the summer and fall that we are discarding so-called Standard or June varieties and offer Everbearing varieties only.

For best results with Strawberries, give all-day sunshine and apply nitrate of soda or fine bone-meal fertilizer in June.

"PROGRESSIVE" EVERBEARING. This desirable variety has been in cultivation in Colorado for several seasons. Is not a large berry but produces continuously until killed by hard freezing. A very profitable market variety. **25 for 50c; 50 for 75c; 100 for \$1.25; 1,000 for \$10.00; postpaid.**

SUPERB. An Everbearing variety of introduction after the Progressive. Is larger berry but hardly as rich. A strong grower and produces well. **25 for 60c; 50 for \$1.00; 100 for \$1.50; 1,000 for \$12.00; postpaid.**

"PRIDE OF DENVER." In our estimation it is the aristocrat of the Everbearing class, being a continuous producer from June until frost. The berries are large, almost round, dark red. **25 for 75c; 50 for \$1.25; 100 for \$2.00; 1,000 for \$15.00; postpaid.**

PRIDE OF COLORADO. Introduced by Mr. Huber, who fathered the famous Pride of Denver. It is similar in shape, though produces more and very uniformly. **Price 50 plants for \$2.00, postpaid.**

COLORADO JUBILEE STRAWBERRIES

THIS variety is the product of Mr. Huber who originated our Pride of Denver. Mr. Huber has had this variety under his personal observation for seven years and last season offered it to the public on the 50th Anniversary of the Huber Family coming to Colorado.

The fruit is conical to oblong in shape, of a bright glossy red. Exceptionally productive with a long fruiting period, almost continuous through the season.

25 plants for \$2.50; 50 for \$4.50; 100 for \$8.00; postpaid.

Fertilizers

The more our soils are cropped the more attention should be given to replenishing the soil fertility in the form of commercial fertilizers. We urge all planters to consider the needs of their soil.

All fertilizers in sacks can not be sent by mail; must be transported by express or freight at purchaser's expense. Articles marked (*) can be forwarded by mail when sufficient funds for postage are added to the order.

DEPENDABLE LAWN FERTILIZER

Our own formula; contains 5 per cent ammonia, 9% available phosphoric acid, 2% potash, with other valuable plant foods. Compare this analysis with any other brand. Ours is the highest quality; 100 lbs. covers 2,000 square feet of lawn; 3 to 4 lbs. for a space 10x10 feet; apply in spring and early summer. 5 lbs., 25c; 10 lbs., 40c; 25 lbs., 75c; 50 lbs., \$1.35; 100-lb. sack, \$2.50.

FINE BONE MEAL (Steamed)

An excellent general purpose fertilizer containing 25-30% phosphoric acid and 1-3% ammonia; especially good for sweet peas and other flowers, especially by florists in greenhouse work. 1-lb. pkg., 10c; 5-lb. pkg., 30c; 10-lb. pkg., 50c; 25-lb. sack, \$1.00; 50-lb. sack, \$1.65; 100-lb. sack, \$3.00.

VEGETABLE GROWER

Prepared for general garden and field crops, will improve the quality and increase the yield, hastening maturity from 10 to 14 days and thereby preventing loss from early frosts. No other investment will give bigger profits than the use of fertilizer in the garden. Analysis is 6% ammonia, 10-12% phosphoric acid, 1-2% potash. Spread broadcast and mix thoroughly with the soil or use in individual rows and hills. From 2 to 3 lbs. per 100 square feet. Suitable for all garden crops, small fruits and forcing vegetables. 10-lb. sack, 40c; 25-lb. sack, 75c; 50-lb. sack, \$1.35; 100-lb. sack, \$2.50; 10 sacks for \$22.50.

SHEEP MANURE

Especially prepared for us. This is one of the most complete fertilizers. It can be used separately or in combination with the special purpose fertilizer. Sheep Manure is considered the best fertilizer for lawns and truck gardens, and contains no strong odor that usually accompanies animal fertilizers. The drying process kills all germs and weed seeds. This fine manure gets into the ground where needed, and is not eventually raked off as is most of the barnyard product. 100 lbs. cover 500 square feet. 10 lbs., 25c; 25 lbs., 50c; 50 lbs., 80c; 100 lbs., \$1.40; 2 or 3 sacks at \$1.30 per sack; 5 sacks for \$6.25; 20 sacks for \$22.00.

ADCO ARTIFICIAL STABLE MANURE

Each year sees less and less of good stable manure available, thus is more need to procure something that takes its place. The ADCO was originally produced in England. It is now available in America. To each 500 lbs. of straw, hay or dried leaves, add 25 lbs. ADCO to make one ton of fresh manure. Full directions with each package.

25-lb. bag for \$3.00, f. o. b. Denver.

Canary Birds—The Ideal Pets

Our birds are all strong and active. Every singer we sell has been tested and known by us as a singer. We cannot send out on trial or exchange birds. State the amount you wish to pay and leave the selection to us. The value of a bird is not in the plumage. All birds are graded as to singing qualities and range of notes.

Hartz Mountain Strain

These are the popular singers and usually are mixed in plumage. Considered the most vigorous. Our domestic bred are very healthy and satisfactory.
