STAPLE ASTERS

FOR THE GARDEN AND CUT FLOWER MARKET — PRIME STOCK

Early Wonder (Extra Early Express or Early Hohenzollern). The earliest of all asters. Comet type, branching from the ground into four or six slender stems crowned with good sized comet type flowers. Disbudded it makes good size. Being a quick grower, it must not be checked in growth by lack of water or cultivation, else it will dwarf. A very profitable aster for bench or open ground. Four colors: White, Rose, Light Blue, Purple or Mixed. Pkt. 10c. 1-16 oz. 25c. 1/4 oz. 35c. 1/2 oz. 45c. 1/2 oz. \$1.00, 1 oz. \$1.75.

Lavender Gem. A fine upright comet aster. good size, long stem, never comes yellow-centered. The earliest true lavender. Pkt. 10c. 1-32 oz. 20c. 1-16 oz. 35c. 1/4 oz. 65c. 1/2 oz. \$1.00, 1/2 oz. \$1.65, 1 oz. \$2.25.

Royal. An earlier form of the branching aster. We consider this the most important in the whole list for the commercial grower. Coming into bloom with the last of the Queen of the Market, it is a most important factor in the cut flower market, both under glass and outside. White, shell-pink, lavender-pink, purple, rose or mixed. Pkt. 10c. 1-16 oz. 25c. 1/4 oz. 40c. 1/4 oz. 75c. 1/2 oz. \$1.25 1 oz. \$2.25.

White, Rose, Lavender Pink, Violet, Lavender, Crimson, Purple, or Mixed. Pkt. 10c. 1-16 oz. 25c. 1/4 oz. 40c. 1/4 oz. 75c. 1/2 oz. \$1.25, 1 oz. \$2.00.

Imperial. A most important aster, much used for making up. Well rounded flowers, good size, on stiffly upright stems. Very free, and useful for taking up and potting in bloom, when it will last for two weeks or more. 6 colors: Purity, Daybreak, Hortensia Rose, Indigo on white ground, Rosy Carmine, Yellow overlaid pink, Lilac, or Mixed. WE HAVE HAD MANY COMPLIMENTS ON THE ABOVE VEGETABLE SEEDS

HUNTINGTON'S SEEDS of PERENNIAL and BIENNIAL PLANTS

ORDERING — IMPORTANT

THE highest grade annual seeds offered by the best houses, come from very much the same sources, wherever you buy them, and comparatively near by, hence it is an easy matter to keep in touch with the crops and to avoid listing crop failures. On the other hand, very much so, the seeds in this list come from all over the world. It is absolutely impossible for us to learn of crop failures of many items until long after the printer has our catalogue finished. If the buyer, in placing an order, will name one or two second choice items it will be of great help to us, and will insure 100% delivery.

GERMINATION

I do not guarantee germination, either in frames or outside, but I do guarantee at least 90% in an approved test. So many causes may contribute to failure that a guarantee of germination is impossible. Condensed directions for growing are sent out with each order.

QUANTITIES

Except in new or very scarce items, each packet will contain from one hundred to five hundred seeds, according to value per ounce. Trade packets will contain at least three times the quantities of the packets, and in most cases 1000 seeds. Many new and scarce items are bought by the thousand seeds instead of by weight. Some costing us as high as \$8 per 1000, and these are priced accordingly.

THE seeds offered in this list, such as are not gathered on the Painesville nurseries, come from all over the world. Crop information on most of these is impossible, hence I do not dare offer them in quantity. It often happens that we have many items in good quantity, which are only quoted in packets. Send in your planting lists for quotations.

Jobbers or growers please write for ounce or pound prices on your wants.

The very highest grade delphiniums, largest singles and best doubles, give a very light seed of weak germination and comparatively short keeping quality. Flowers from the strains offered below will be wonderful in quality, and plants will be large and strong. I do not recommend planting the seeds outside except in a most sheltered situation. Also do not attempt them after Sept. first. After that time we will hold orders for fresh stock, which should be harvested soon. The named sorts will not come true, but colors and types will predominate. I have tried, and seen on other places, about every strain of delphinium offered on earth. I have seen none better than these offered below, but I have seen many not nearly as good, though held at higher prices.

PRIMULINUS HYBRID GLADIOLI

All Kunderdi

In this section will be found varieties distinguished for the varied and beautiful tints of pink combined with yellow, orange, and saffron. In obtaining these new varieties, the originators crossed the old yellow primulinus or Maid-of-the-Mist with many of the existing strains. Some of the varieties have ruffled petals, some are plain-petaled, and some have intermediate markings. It has been well said that "these new introductions will for a long time to come, range as the greatest achievement in Gladiolus culture."

DAHLIAS

ANOTHER of our specialties. It would be very easy to offer a collection of 500 sorts. The list below is selected as the best from more than twice 500 for their color, form and free blooming qualities in both northern and southern climates. Those who have "no luck with dahlias" will do well to try them. Many of the finest varieties, especially in the lighter colored cactus and decorative dahlias are a distinct failure in the northern and middle states and more than 20 miles from the Atlantic seaboard. The following list is a survival of the fittest from over 500 varieties and will be found to do well wherever Dahlias can be grown at all. They are carefully rogued of yellow centers and all undesirable traits.

Prices, each and 12 by mail prepaid. Glad to quote per 100 on request.

HARDY PERENNIAL PLANTS AND SHRUBS

DURING the past few years the demand for perennials has increased so rapidly that the average grower has not been able to keep up with the demand. The plants are used by the hundreds in every garden, and some varieties find their greatest usefulness in floral establishments where they are worked into formal designs.

In many cases the average hardy garden or border suffers from an unwise selection of perennials. Digitalis, the Michaelmas Daisies, or the Hardy Chrysanthemums, deserve a prominent place, but they should not be used to the exclusion of others equally good.

The plants which are offered in this list are field-grown and are wintered outdoors in the extremely cold winter climate which we have along the shores of Lake Erie.

Not less than six plants of one variety at the dozen price. If one of each of six different varieties is ordered, the single price will be charged.

Prices per each, per three and per dozen by mail postpaid. Per hundred by express collect. We are able to send larger plants by express and if requested will do so in whatever quantity.

ACHILLEA (Milfoil or Yarrow). One of the prettiest plants in the entire perennial list. Splendid for cutting.

PEONIES

Peonies, especially the modern introductions, are probably the most valuable of all perennial plants. Careful selection of flowers give a wonderful range of color, and extended blooming period. Once planted they require little care, but they will more than repay good cultivation in plentiful bloom, and of better quality.

PLANTING. Peonies may be planted in fall or spring, but fall is much to be preferred. Avoid planting deeper than 3 inches of soil over the crown or eyes. After planting, mulch well with stable manure to avoid winter "heaving." Remove this and spread about the plants when freezing is over. Never cut flowers so that all the leaves are taken from the plant, and do not cut the stems below the first pair of leaves. This is a prolific cause of short lived plants.

RATINGS AND ORIGIN. The figures give at left of each variety are the ratings given them by the American Peony Society. In brackets is the name of the originator, and date of introduction. Back of this list is a planting of over twenty thousand plants, and we are able to give you prime stock.

PRICES. The first price is for staple planting stock, of two to five eyes, the second is for two year, 4 eyes and up, and the third is for clumps of 8 eyes and up. Six plants for five times the price of one. Write for quotations in lots of 25 to 100 of a sort. Two to five eye plants, the first priced, are by mail prepaid. The last two sizes are too heavy to mail and are by express, charges collect.

PEONIES Continued

- (8.1) **Marchioness of Lausdowne** (Kelway, 1899). Just why this variety has a lower rating than *Therese I* do not understand. It is almost identical in form, size, growth, indeed, in every way, with the sole exception of color, which is a lively clear pink. With us it is ideal in every way, and personally I think more of it than any other pink that I have seen. It is very scarce and is seldom found in any wholesale list. Our stock is limited and we can offer 3 to 5 eye divisions only. Early mid-season. \$3.50.
- (8.4) **Marguerite Gerard** (Crousse, 1892). Very large, compact bloom, developing a crown with yellow stamens, pale hydrangea pink, with center minutely flecked carmine. Fragrant, late. 75c, \$1.25, \$1.75.

(8.3) **Mons Dupont** (Calot, 1872). Large flat flower of milk white, center lightly splashed crimson. Erect, tall, and free. A fine late mid-season white. 75c, \$1.00, \$1.25.

(7.2) **Rubra Superba** (Richardson, 1871). Were it not for the rather weak stem of this variety, it would rate quite closely to ten. Flower of rich, deep, brilliant, crimson, large, full, and double, and the best keeper of the whole peony family. Its only fault is that the stem is not quite heavy enough to carry the immense flower after rain or in heavy wind. Should be staked. Late mid-season. 75c, \$1.00, \$1.25.

ANNUALS FOR FALL SOWING

It is not generally known that many of our best and prettiest annuals may be sown in the fall, and that some of them are even better if fall sown. Among these are Alyssum, Antirrhinum, Calendula, Calliopsis, Candytuft, Centaureas, Cyanea and Imperialis, Clarkia, Dianthus, Escholtzia, Euphorbia, Godetia, Gypsophila, Hunnemannia, Kochia, Larkspur, Marvel of Peru, Didiscus, Linum, Lupinus, Nemophila, Nicotiana, Nigella, Petunia (bedding vars.) Phlox, Drummondii, Poppy, Schizanthus, Verbena. Sweet Peas may also be sown in fall, but personal experience here has shown that our frigid Ohio springs are rather hard on the seedlings. All

the above will be found in splendid variety in our list if annuals.

Plants from fall sown seeds are hardier, with better root system, and can be transplanted in the cool, wet weather much easier than those from the spring sowings. They will bloom earlier, and blooming season can be greatly lengthened if both fall and spring sowings are made.

NOTICE—Care should be taken not to sow too early, else the seeds will germinate and seedlings will winter kill. Early November is the best time in this section.

CONCERNING PERENNIAL SEEDS AND A FEW OTHERS

Poor germination of seeds makes a fine chance to lay something up against the long suffering seedsman. I think, from years of experience with him, that the average seedsman is doing his level best to get you something that will produce results, and to give you a dollar for the dollar you spend with him. Barring a few scarce perennial seeds, I doubt if there are any seeds held over for one year. Failure may result from so many causes that even our expert growers are not likely to lay failure to old seeds on a first trial. Many items either must be fall planted, or are better planted at that time. These are, and have been for many years, a source of complaint, and of dark suspicion that the seedsman is sending out antiques. Among these are *Adonis*, *Aetheopappus*, *Anthericum*, *Apocynum*, *Asperula*, *Cassia*, *Colchicum*, *Canvallaria*, *Cirsium*, *Dicentra*, *Dictamnus*, *Ferula*, *Echinops*, *Gunnera*, *Hedysarium*, *Helleborus*, *Heracleum*, *Hypericum*, *Liatris*, *Morina*, *Oenothera* (*Missouriensis*), *Pardanthus*, *Peony* *Phlox*, *Sidalcea* *Spirea* *Trollius*, about all vine and shrub seeds. Above items, if planted in frames in fall, or if planted outside, and given some light covering to prevent heaving, will at once remove all suspicion as to any advanced age.

Then there's the really fine seeds, many of which should not be covered at all. *Heuchera*, *Lobelia*, *Leontopodium*, *Gnaphalium*, *Erinus*, *Androsace* and *Giant Petunia*, and other fine annuals, either should be covered very lightly or else not covered at all.

Each spring we plant about two acres of perennial seeds, as time and weather will allow, from about April first to May fifteenth. Such large items as *Hollyhock*, *Mallow*, *Centaurea*, *Gaillardia*, *Coreopsis*, and like, invariably, barring accidents, give us a good stand, but the finer and more uncertain *Campanula*, *Digitalis*, *Aquilegia*, (note that I offer these in two sections), *Agrostemma*, *Double* and *finer Hybrid Delphiniums* (*Belladonna* and *Bellamosa* are sure fire outside) *Lychnis*, and other medium fine seeds often fail, or after germinating meet up with weather conditions that put them out of the running. We expect little from these, however, and make all preparations to handle them in frames. When we do get a stand of them outside it saves much labor and time, so we always try them outside first.

When the grower is not able to be constantly with the seedlings, the ideal summer cover for the frames is common cotton cloth, next best is lath frames, spacing lath about $\frac{1}{2}$ inch apart. We also use glass, covered well with a paint made from white lead thinned with gasoline. This shades during hot weather and is mostly washed off by fall.

Prepare all seed beds, either frames or outside, by thorough plowing or spading, and raking, then for fine seeds level the soil and firm it lightly, scatter the seeds thinly, first seeing that the planting space is level, so that the seeds will not wash to one corner of the little block when watering. Then screen soil over the seeds to the depth of the size of the seeds, or so that they are just covered from sight. Water lightly with a fine sprinkler and await results. Do not allow the soil to bake.

DON'T—Plant seeds deeper than the size of the seeds.

Plant fine seeds in full sun in hot weather

(Coarse seeds will do for you about as would lettuce, carrot, beet, or like items).

Plant seedlings out in the fall. Let them stand in seed rows or frame till spring, with light mulch.

Water too much, or with too heavy force. This breaks the tender little plants, and causes damping.

Use too much fertilizer on the little seedlings. Let them get large enough to "eat."

You will never get germination from poor seeds, but you will often get poor germination from perfectly good seeds, at least we do. The trouble lies almost invariably with something done wrong, too heavy, too light, covering; too much, too little water; wrong soil; too much, too little air. Use your plant or seed sense, study your conditions and you will be richly rewarded for a little time and less money spent in the most fascinating branch of gardening. I will gladly help solve your planting problems, but please remember that you are one of many, and that I'm busy. Don't write until you know you cannot get results yourself.

Respectfully,

R. E. HUNTINGTON.

NOTICE

THE seeds of some plants will lie dormant after sowing for quite some time, some of the more stubborn, such as *Eremurus*, often lie for two years before showing. Others often lie for many months after being sown. I recommend that flats or pots containing such items as the fine *Alpines*, *Androsace*, *Primula*, *Saxifragas*, and the like, be held for two years after date of sowing. Frost helps germination even after seeds have lain in soil for months. Read directions above. Note that **MANY ITEMS MUST BE SOWN IN FALL** for best results.

Too much heat, sudden change in temperature, too much or too little moisture, often has disastrous effects. The fine items are very exacting, and the best of growers quite often fail with them. There's a lot of satisfaction in making a good showing with them, however.
