The Brook Gardens
H. J. BROOK
Goodland, Indiana

FOREWORD

The plantings of Peonies and Irises known as the Brook Gardens were started some fifteen years ago. During these years the better sorts of both Peonies and Irises have been added until the collection now comprises the finest varieties grown.

Of the long list of perennial plants the Peony and the Iris are the most popular. The bearded Irises closely follow the Darwin Tulips, filling the garden with an almost endless variety and combination of color and blooming over a long period of time. Even if sadly neglected Irises will continue to bloom year after year in the poorest of soils. However they will repay any care given with much fine bloom. As the midseason Irises fade the earlier Peonies begin to show their loveliness. From the time they come through the soil in the spring until cut down by the hard freezes of early winter, most Peony plants are highly ornamental and during the blooming season are the feature of the garden.

Both Irises and Peonies lend themselves to all types of gardens; on the small lawn or on the large estate they are equally at home. The smallest garden can usually accommodate a dozen of the choicest Irises or half as many of the finer Peonies. No planting is complete without these popular perennials.

BUSINESS TERMS AND INSTRUCTIONS

TERMS. Our terms are cash with order. We make no C. O. D. shipments.

DISCOUNTS—

The following discounts apply on all retail orders with the exception of the collections listed on pages 16, 17, and 38 and 39 on which no further discount is given.

5% discount on orders amounting to \$10.00 or over
10% discount on orders amounting to \$25.00 or over
15% discount on orders amounting to \$50.00 or over
20% discount on orders amounting to \$100.00 or over

Varieties marked (*) are subject to the following quantity prices:

25c varieties, 3 for 50c; 6 for 85c; 12 for \$1.50

35c varieties, 3 for 70c; 6 for \$1.20; 12 for \$2.10

50c varieties, 3 for \$1.00; 6 for \$1.70; 12 for \$3.00

TRANSPORTATION—We prepay parcel post or express charges on retail orders and for that reason we cannot accept orders amounting to less than \$2.00 unless 25c is added to remittance for postage.

SHIPMENTS—Iris shipments begin July first and continue until November first. Peony shipments begin September first and continue until the ground freezes. Early orders are appreciated.

GUARANTEE—We guarantee all plants to be true to name. Should any plant be sent out mislabeled we will either replace it a true plant or refund purchase price.

SIZE OF PLANTS—Irises are priced for well grown single rhizomes. Peonies are priced for standard three to five eye divisions or plants with ample root system.

SUBSTITUTIONS—If we are unable to send the variety selected we promptly refund your money unless you ask us to substitute some other variety.

INVITATION—Our exhibition gardens, located in the residential section of Goodland, are a magnificent sight during the Iris and Peony blooming season. Visitors are always welcome.

H. J. BROOK.

MEMBER—American Iris Society, American Peony Society, American Gladiolus Society, Commercial Peony and Iris Growers Association.

Culture of Bearded Iris

Irises will grow to perfection if planted in good, well-drained garden soil, exposed to full sun and thoroughly cultivated. Irises do best in raised beds that insure proper drainage. Crushed lime-stone, old plaster or building lime mixed with the top soil proves very beneficial for all bearded iris. The lime not only sweetens the soil but greatly improves the condition of the heavier soils. If soil needs enriching, two tablespoonfuls of bone meal, thoroughly mixed with the soil will be sufficient for each plant. Never use fresh manure near Irises.

Water sparingly and only during a very dry season before blooming. Too much moisture seems to encourage root rot.

In planting, barely cover the rhizome (the fleshy part of the root) but allow the roots to extend deeper into the soil to act as anchors until the new roots are formed. Irises of a single variety should be placed about 18 inches apart; while in a mixed planting, twice that distance between varieties, should be allowed. Plant any time after blooming season, the earlier the better.

Cultivation should be shallow since the roots are just under the surface.

RATINGS

The figure placed before the names of the varieties are the official ratings given by the American Iris Society; 100 being the standard of perfection.

The first figure indicates its rating as an exhibition flower; the second figure is the garden rating indicating its landscape or garden qualities.

If you grow as few as a dozen varieties you will derive a fuller measure of enjoyment by belonging to the American Iris Society.

Membership brings four bulletins each year full of interesting information about Irises. Annual membership fee, \$3.00. J. B. Wallace, Jr., Secretary, 129 Church Street, New Haven, Conn.

General List of Irises

*83-82—Afterglow (Sturt. 1927)—Soft grayish lavender, tall and thrifty. See Ambassador Collection	\$.25
*76-76—Albert Victor (Barr)—Lavender and blue, tall, good grower. See Standard Collection	.25

Combine Irises and Peonies in Your Plantings

PEONIES

Peonies will grow in almost any kind of soil, from light sand to heavy clay. However, a happy medium between the two extremes will give better results. The sandy soil can be benefited by the addition of some clay and the heavy clay will be much better for peony culture if some sand is added.

Peonies require a well drained soil. If the natural drainage is not sufficient, it is well to plant in raised beds so that the surface water is quickly carried off. Water standing over peonies will surely result in root rot and the eventual loss of the plants. The plant beds should be dug to a depth of 15 to 18 inches, and the soil well pulverized. If the soil needs enriching a hand full of bone meal thoroughly mixed in before setting the plants will prove a sufficient and safe fertilizer. **NEVER USE FRESH MANURE ON PEONIES.** Old rotted manure may be used between the rows, if proper care is taken to keep it from coming over the crown of the plants, and if the soil is slightly mounded over to shed surface water.

In planting, make the hole to receive the plant large enough to take the roots without crowding. Make a small mound of earth in the hole and place the root on it so that the topmost eye will be about an inch below the surface of the ground, after firming the soil well about the roots. For the first year the earth should be brought up to a mound three inches above the surrounding ground level and after the plant is well up in the spring it is well to carefully lower the mound to not more than two inches, just enough to allow the water to run off from over the plant. The eyes of a peony root should never be more than two or three inches below the surface of the ground. Mounding the soil the first winter will prevent the frost from heaving the plant out of the ground and a light covering of coarse litter the first winter will protect the plant from the alternate freezing and thawing in the early spring, which often lifts plants out of the ground, unless they are given some protection. An established peony plant requires no protection through the winter. Plantings can be made from September first until the ground freezes, but earlier planting will give the plants a better chance to become established before winter sets in.

The rating giving a peony by the American Peony Society, based on a scale of ten points, as perfection, should serve as a safe guide in the selection of varieties. Where no rating is given, the variety has not as yet been rated by the Society.

Join the American Peony Society. Application for membership, with annual membership fee of \$3.00, may be mailed directly to W. F. Christman, Secretary of The American Peony Society, Northbrook, Illinois.

General List of Peonies

Adolphe Rousseau —(Des. & Mech., 1890). 8.5. Double; very large; early; deep garnet; yellow stamens showing. Tall, strong stem, Very good landscape variety	\$1.25

The above two collections (eight plants) for\$6.00

Perennial Poppies

Perennial poppies will thrive in good garden soil that is well drained. They come into bloom along with the peonies and if planted against a background of shrubbery they will produce a magnificent sight. Perennial poppies make a fall growth and should be planted in August.

Beauty of Livermore—Rich red	\$0.75
Flanders—Orange red	1.00
Mrs. Perry—Salmon-pink	.75
Procerpine—Large orange-scarlet	1.00
Trilby—Rich scarlet, tall and large	1.00

Plant Poppies for a Splash of Color

Hardy Lilies

The hardy lilies bloom from the middle of June until about the first of October. When planted in well drained garden soil with some sharp sand surrounding the bulb the following listed varieties will bloom to perfection. An ideal location is among your peonies. They seem to require the shade afforded by other plants.

Candidum—(Madona Lily) Pure white, very fragrant, blooms in June, should be planted 2 to 3 inches deep and during the months of August or September.
35c each, 3 for \$1.00.

The following varieties are best planted in the Spring.

Regale—Very large white flowers shading to yellow at the center, outside streaked brown, shading to pink, blooms in July plant 9 inches deep, early spring, each 50c.

Speciosum Rubrum Magnificum—Rich carmine on white ground, with crimson spots; blooms in September; plant 10 inches deep early spring. Each 35c, 3 for \$1.00.

Tigrinum Splendens (Single Tiger Lily)—Orange red in color, grows 4 to 6 feet tall; blooms in September; plant 10 inches deep in November or spring. Each 25c, 5 for \$1.

Tigrinum Flore Pleno (Double Tiger Lily)—Color and habit same as single variety but flower has several rows of petals, Each 30c, 4 for \$1.00.

Umbellatum—Orange-yellow flowers in June. Very profuse bloomer, plant 10 inches deep in November or early spring.
Each 35c, 3 for \$1.00.
