CACTUS

and

SUCCULENTS

from
all over the world

There are so many varieties
unknown to us, we are com-
pelled to list only a part of
our large stock.

You are cordially invited to
visit the nursery at any time
—It's an education.

HOLLYWOOD, CALIFORNIA

TERMS

Remit by post office or express money order, registered letter, or personal check.

If wanted by parcel post, add postage as follows: on orders from states west of the Mississippi river, add 10 per cent; if east of the Mississippi add 20 per cent.

Large plants sent by express collect. C. O. D. orders not accepted.

CULTURAL HINTS

Air, light and good drainage is what cactus and the like plants of a succulent character should have in the first instance.

Best soil in general is a mixture of three parts of loam, one part of leaf mould and two parts of sand.

For the globular species, like echinocactus, better use coarse sand instead of leaf mould.

Plant them as shallow as possible.

Water your plants well and thoroughly, and, when the soil gets dry, water again.

A Suggestion

If you will mail us a description of your plan, giving space; whether outdoors or for pots inside; your local climatic conditions; whether you wish to plant native cactus or foreign, or principally succulents, we will furnish you with costs together with expert advice regarding your particular problem—without obligation.

Please Note

Native Cactus must be watered carefully to avoid rotting.

Succulents need more water than either the native or the foreign cactus.

Foreign Cactus has been bred to stand considerable moisture.
