Excellence

IF there is any one thing for which Jerry Brookins & Son have striven for successfully, it is excellence. The quality of their product and services has been the paramount influence in developing the policies upon which this business has been built.

The principals in this business, lovers of flowers themselves and artists in their chosen field, have surrounded themselves with a group of men whose aims are in accord with the primary policies and ambitions of the founders. From a meagre beginning—the growing of a few flowers for a livelihood and to gratify the yearnings of a soul after beauty—the business has grown to its present imposing proportions. First a few cold frames, then a tiny greenhouse, then, as momentum increased, greenhouse after greenhouse until now their range is measured in acres. Always the same goal in sight—the loveliest and finest flowers that could possibly be produced.

Ever alert to changing conditions, the organization sensed the growing popular interest in gardening and outdoor decoration and began to stock a nursery, not alone with the ordinary things but with varieties of trees, shrubs and plants whose unusual beauty or character foretold greater recognition and popularity as their virtues became known. Still more recently they sensed the groping of the public mind for authoritative information and counsel on matters of landscape design. Their action was prompt and characteristic.

A Department of Landscape Design was added with a corps of trained and experienced landscape architects who give personal and individual study to the problems of clients who hesitate to undertake the development of their grounds unaided, or who find their time too limited for the continuous attention which the problem requires. This department with its thorough knowledge of materials and their uses is effecting great savings by helping clients to avoid costly errors and experiments. At the same time, by intelligent cooperation they safely allow the greatest freedom in self-expression. A corps of skilled gardeners and craftsmen

execute the landscape projects of their own or other designers to the enthusiastic approval of an ever-widening circle.

The activities of these Landscape Departments extend far beyond first expectations. Not only are they concerned with the proper placing and planting of trees, shrubs and perennial plants to the usual extent; but they also plan and execute the details of garden architecture, grading, fences, walls, fountains, pools, walks, drives, swimming pools, lakes, golf courses, bowling greens, recreational areas, school grounds, athletic fields, formal gardens, rock gardens, estates, etc.

These departments also offer a Maintenance Service. This Maintenance Service commands the *counsel* of a member of the designing staff, the *skilled workmanship* of trained gardeners for the cultivating, weeding, mowing, trimming, edging, fertilizing, watering and general care and the *craftsmanship* of specialists for the more technical operations of pruning, tree surgery, and similar operations.

During forty consecutive years of horticultural work they have acquired a wonderful background of experience in practical methods and with this they have merged the best of scientific methods and modern ideas. This priceless combination adds great value without price to every bit of work they do.

YEARS ago Jerry Brookins & Son anticipated and prepared for the vogue of Rock Gardening which is now sweeping over the country. They point with pride to an imposing collection of rare and unusual rock plants and alpins which are listed among the hardy perennials in this catalog. In addition to the cataloged items there are under trial many new varieties recently obtained from European and other correspondents. Plant lovers will find a visit to the Brookins trial fields and gardens during the spring and summer months delightful and interesting.

The Garden Department prides itself upon the cultural perfection of its plants as well as the extent of its list. Although the customary seasonal planting of perennials is advised, their gardeners have been so well trained in lifting plants from the beds that many choice perennials find their way *in full bloom* from field to garden without serious setbacks.

The Floricultural Division was developed originally to produce flowers and plants for wholesaling to retail florists. You will find Brookins flowers on sale at all the better shops. Insistent demand, however, has called for a further service and they are now prepared

to furnish cut flowers or plants directly from their greenhouses. When time permits you to order flowers in advance, either thru your dealer or directly from Brookins, you will find, as so many clients have discovered, that the exquisite freshness and beauty of the flowers, together with their tasteful and artistic arrangement makes them doubly acceptable and appreciated.

The expansion of the several departments has outgrown the quarters which have long served for store and office, so just this spring all the customer contact departments have been housed in a separate building called the Studio. Here are the offices of the landscape architects, the drafting room, the executive offices and salesroom for flowers and plants. The early Colonial treatment of this studio building (pictured on the cover) is extremely interesting, worthy of a visit on its own account.

“Visitors Welcome”, reads the sign at the entrance of the establishment. And it means just that, with the accent on both words. You are invited to visit their greenhouses, gardens, nurseries and all other departments just as you would visit a public institution of the same kind. No one in the whole organization will urge or even suggest a purchase. Yet you need not feel neglected, for all employees are instructed to courteously assist any visitor who requests help or information. If you would like an attendant to escort you through the greenhouses and gardens, arrangements will be made for you at the studio.

So, when you visit them, do not feel that lack of insistence means a lack of interest. Years of work among growing flowers have taught them the futility of forcing the inevitable. And it is *inevitable* that you who appreciate beauty *must* some day possess your share of it. When that day comes the Brookins organization will delight in serving you. In the meantime they prefer to let the perfect flower of friendship develop unhampered by commercialism.

HARDY, HERBACEOUS AND ALPINE PLANTS

★ ★ ★

IN presenting this offering of perennials and alpine, we particularly invite your attention to the fine quality of the plants.

The materials have been produced under the personal direction of Mr. Jerry Brookins, who has treated this department more as a personal hobby than as a commercial enterprise. Insistence upon excellence has outweighed every other consideration. We have spared no expense where it would raise the standard of quality.

We take great pride in the manner in which we dig our perennials and the care we use in handling them after they are dug. They are not to be confused with plants dug with bare roots and handled in the usual manner. We know that you will be pleased with the results obtained from their use.

We cordially invite you to our gardens.

NOVELTIES

We have growing in our Gardens and trial fields a number of varieties of recent importation, of which our knowledge is too limited either to write accurate descriptions or to fix firm prices.

These varieties are under constant observation and we shall be glad to show them to all who are interested and to quote prices on the various individuals.

A few of these novelties are included in this edition.

GRADING

When grading for height, the grade shall be the distance from the surface of the soil at the base of the plant to the extreme height of the plant in its natural position.

In grading to caliper, the grade shall be the diameter of the stem one-foot above the surface of the soil.

SPECIMENS

Unless otherwise noted, specimen plants are to be priced at the "each price" of the next higher grade than its actual measurements. Specimen plants are to be well-shaped and of more than usual perfection.

In addition to the specimen grade, there will be found occasionally items which are obviously extra specimens and they will have to be especially priced.

Where 10 and 100 prices are quoted, quantities of one to four will be priced at the each price, five to forty-nine at the ten price, fifty and upward at the hundred price.

Prices quoted are for excellent grades of the sizes indicated, heavier in fact than the usual nursery practice of grading allows. Our method of nursery management produces a limited quantity of plants which with several years of added growth have gained little in height but much in sturdiness. These we know as "HEAVIES". Still others have by careful selection, pruning and transplanting approached maturity of size and form. These we call "SPECIMENS".

HEAVIES will be priced at the ten rate of the next higher grade. SPECIMENS will be specially priced according to their perfection—usually at the each price of the next higher grade.

GUARANTEES

The Brookins Guarantee reads as follows:

"Jerry Brookins & Son guarantee every tree, shrub and plant furnished and planted by them to live or will replace free at their nursery, transportation and planting costs to be borne by the pur-

chaser. No replacement will be made unless the material was paid for in full when due and only one replacement of any article will be made under this guarantee."

It is mutually agreed that liability for failure or untruthfulness to name is confined to free replacement or refund of the purchase price plus interest.

The purchaser agrees that no claim hereunder will be valid unless same is presented to Jerry Brookins & Son in writing on or before August 1st following Spring planting, or, on or before June 1st following Fall planting.

The furnishing of plant materials herein are subject to crop failure, disease, fire, damage by the elements, strikes or any agency beyond the control of the seller.

Prices and terms subject to change without notice, and all quotations subject to prior sale.

TERMS OF PAYMENT

Customers unknown to us will please send cash or references with their order. Failure to do so frequently causes delay as it is impossible for us to make immediate shipment to new clients whose responsibility is not known to us.

DELIVERY

Motor truck deliveries of substantial orders are usually possible without extra charge within a reasonable radius of our nurseries. Buffalo and its suburbs are within the area regularly covered by our delivery trucks and there is no additional charge for delivery to these points.
