HIGH GRADE PLANTS

TIFTON : GEORGIA

Vegetable Seed Trials
D. N. Shoemaker JAN 22 1930

To My Friends and Customers

In presenting my 1930 catalog I wish to say that I have plenty of good Cabbage and Onion plants and can ship out all orders day received, weather permitting. Where the heavy freeze killed seventy-five per cent of all the plants in the South during December my plants were not hurt and I can ship you plants that will give you better results and make you more money than ever before.

My Guarantee.—I positively guarantee all plants grown by me to be exactly as described in this catalog, and fresh, pure, genuine and unadulterated, carefully selected and tested. I also guarantee them true to name and will replace free of charge any that may prove otherwise through possible error.

Succession Cabbage.

CABBAGE BRING HIGH PRICES

This year cabbage are higher than they have been in years retailing at one hundred dollars per ton. You can easily raise from six to ten tons of cabbage per acre from my fine frost-proof plants. Think of the profits—six hundred to a thousand dollars an acre quick money. I firmly believe that the man that puts out all the cabbage he can as early as possible in his locality will be the man with money in the bank when his crop matures. Think it over and act now.

Early Jersey Wakefield.—Many market gardeners consider this the very best cabbage in cultivation. Its merits are many, among which are medium heads for an early variety, small outside foliage, and uniformity of crop. The heads are of medium size, and are white, solid and tender. This variety always brings a good price on the market on account of its earliness, thereby netting the grower large returns.

Charleston Wakefield.—This cabbage is very much like the Jersey only it has a much larger head and is about 10 days later. This is a very desirable variety for shipping purposes as the heads are very solid and firm. A strong favorite with growers for a main crop.

Succession.—The earliest of the flat head variety, a sure header, and a very hardy grower both in cold and warm weather. This variety is grown extensively in the South and gives universal satisfaction. Heads are of uniform shape, not too flat and very solid.

Large Late and Early Flat Dutch.—This variety is one of the oldest in cultivation, head very large and flat, very tender and fine-grained. My strain of these varieties are of the very best to be had.

Copenhagen Market.—Very fine, nearly as early as Jersey Wakefield; stem, short; heads large, round and solid, with few outer leaves of an upright growth. Our stock of this popular variety is very early, uniform and dependable.

Jersey Wakefield.

Vegetables sold early in the season bring many times the price of those marketed several weeks later. That's why Fulwood's Frost-Proof Cabbage Plants are so profitable for the gardener; they produce full-grown heads three weeks before plants which have been home-grown. I have been growing cabbage plants for more than 21 years and because of my careful selection of seed you frequently get **TWICE AS MUCH CABBAGE PER ACRE.**

Fulwood's Frost Proof Cabbage Plants

NOW READY

In this section the soil and climate conditions are just suited for growing tough, hardy cabbage plants during the Winter and early Spring. The plants make a slow but steady growth, until at eight to ten weeks of age they are very tough and hardy. When in this condition they can be shipped to territory farther north and be planted in the open ground a month or six weeks sooner than the home-grown hot bed or cold frame plants. These **Frost-Proof Cabbage Plants** will stand a temperature of 20 degrees above zero without injury. The land freezing, or the plants being covered with ice, sleet or snow after they are planted will not injure them. You know what the difference in profits will be if your crop is matured and marketed before the general crop matures.

Prices on Cabbage plants and Onion plants are the same and I will gladly mix an order shipping part onion plants and part cabbage plants if you desire.

Early Flat Dutch Cabbage.

Fulwood's Cabbage Plants

NOW READY

How To Grow Cabbage.—To grow a good crop of cabbage I would advise selecting a deep sandy loam with a southern exposure if possible. Apply broadcast from ten to fifteen loads of well rotted stable manure to the acre and plow in. The land should be harrowed thoroughly and rows laid off three to three and a half feet apart. Apply about 500 pounds of high grade

fertilizer to the acre, and mix well with the soil. If you have no stable manure apply from ten to fifteen hundred pounds fertilizer to the acre, half broadcast and half in the drill. As cabbage are gross feeders bear in mind that you cannot fertilize them too heavily. The Wakefield varieties should be set out from fifteen to twenty inches apart. It is important to set the plants deep in the ground, up to the first leaf, in order to keep the stem from freezing and cracking, which will cause the plant to fall over and die. You can plant about twelve thousand plants of the Wakefields to an acre and ten thousand of the flat heads to an acre.

The first cultivation should be deep, but when they start to head cultivate them shallow and apply 200 pounds nitrate of soda per acre.

I know how to produce good plants; you'll find no runts or weaklings among those you purchase; practically every one makes good. You'll easily get from 6 to 10 tons of cabbage for each acre you plant.

Charleston Wakefield.

Insure Your Crops

By using Fulwood's high grade plants. Growing plants is all I do. I have been at it for twenty-one years and devote my entire time to this work. I spare neither time nor money to give you the very best plants obtainable. I change my lands every year, thus keeping my plants free from disease. I have no hot-houses but grow all my plants in the open field, thus making them hardy, stocky and strong. You cannot risk planting your truck crops and garden with anything but the very best plants obtainable.

My twenty - one years experience stands behind every shipment I make. Have your banker look me up in Bradstreet's.

As this catalog goes to press I have over a hundred acres of the finest cabbage plants I have ever had. They are tough, frost-proof plants ready for shipment at any time wanted. My seed are treated before planting and sprayed after they come up to prevent disease. I plant on ground that has not been planted to cabbage before. I know there is not another plant grower in the plant business that takes the pains I do to give my customers the very best plants to be had.

This season a heavy freeze killed most all the plants in the country and I am one of the few growers that have plants left and can supply my customers as usual. The December freeze killed nearly all the plants in the South. My plants were not damaged and I can ship your order day it is received with the finest plants you have ever used.

Some people when they are ready to buy plants pick up a paper and order from the cheapest ads. They are always disappointed as they are delayed in getting the plants and these cheap plants grown by people that know nothing of the plant business never give satisfaction. Send your order to a reliable grower.

Frost Proof Onion Plants

Onion Plants are much better than sets, as they make larger Onions and do not run to seed. They also keep when cured and stored. Ready October 1st, to June 1st.

Onion Plants Same Price as Cabbage Plants.

Varieties—Bermuda and Prizetaker.

Onion Plants, Ready Now.

Prices on Cabbage plants and Onion plants are the same and I will gladly mix an order shipping part onion plants and part cabbage plants if you desire.

Notice

Beware of cheap plants offered you by inexperienced growers. Every year hundreds of people spurred on by my success try to go into the plant business. These would-be growers have no experience, no money and no customers and after a year or two are heard from no more.

Sweet Potato Plants

My Sweet Potato Plants Are Certified
Free From Disease By Georgia
State Entomologist.

Porto Rico Sweet Potato Plants, Ready April 1st.

VARIETY:

Porto Rico.—In my opinion the Porto Rico is the very best all around Potato on the market. It is from two to three weeks earlier than any other yam. Enormous yielder and a vigorous grower. Eating qualities unsurpassed, flesh red and very sweet. It is a heavy yielder and the best keeper. This is the Potato introduced into the Northern markets. Curing houses paying more for this Potato than any other variety.

Sweet Potato plants ready about the first of April. Shipments made throughout April, May, June and July. I would advise sending in orders for Potato plants as early as possible and the first orders received are the first orders filled and sometimes the supply does not meet the demand.

Packing

All of my plants are tied in bunches of 50. Packed by experienced help, in the lightest crates possible. I have shipped plants successfully to all of the Southern States, Western States, and all of the Northern States and some places in Canada. Write your name, address and postoffice plainly. You will be notified by mail the day your plants are shipped.

All seed planted by me has been treated with Sem-e-san and the plants are raised on new soil which absolutely prevents the plants from having any disease of any kind. I believe you can grow more Cabbage from my plants than any other plants on the market.

READ THESE TESTIMONIALS

New York, May 6, 1929

Mr. P. D. Fulwood, Tifton, Ga.

Gentlemen:—The ten thousand Golden Acre Cabbage plants arrived in very good condition, in fact we are very happy with the way you handled the order. The count was strong so that we were able to leave out a few that were wilted. They have been in the ground a week now and the way they are picking up makes us think that we are going to have three acres of good cabbage.

I may want to place an order with you for early tomatoes and peppers. Kindly send me your price and variety list by return mail.

Very truly yours,
Joel E. Nystrom.

Mr. P. D. Fulwood, Tifton, Ga.

Dear Sir:—I want to say a few words in regard to your cabbage plants. They grow off quicker and make finer cabbage than any plants I have ever used. I shall always be ready to say a good word for your plants. They have always made large cabbage.

Yours truly,
C. M. Baines, Gatesville, N. C.

Mr. P. D. Fulwood, Tifton, Ga.

Dear Sir:—I have been ordering plants from you for fifteen years. I always find them just what you say.

E. T. Merideth, Marmaduke, Ark.

Mr. P. D. Fulwood, Tifton, Ga.

Dear Sir:—Received my cabbage plants in first-class condition. They certainly are fine plants, they stood the frost and freeze the other night and now I know they will be all right. They are growing nicely. Your plants are such nice plants. Hoping you the best of luck.

Mrs. Mertie Nail, Biglick, Tenn.

Mr. P. D. Fulwood, Tifton, Ga.

Dear Sir:—Those plants we got from you last year were so nice and they done just fine. Yours truly,

Geo. H. Miller, Walnut, Ill.

Mr. P. D. Fulwood, Tifton, Ga.

Dear Sir:—Just a few lines to let you know that we have received the cabbage and onion plants in fine shape. We are well pleased. Thanking you for the order we remain, yours truly,

Ben Walters, Trenton, Ill.

Tomato Plants

READY APRIL 1ST AND AFTER
Fulwood's Tomato Plants Have Strong
Bodies and Roots.

I ship more Tomato plants than any grower in the plant business, shipping millions of them to canning factories all over the country, as well as to small gardeners and truckers.

Culture.—Land for tomatoes should be high and well drained. Apply about a thousand pounds high grade fertilizer in the drill. Lay off the rows from four to five feet apart, and set the plants from three to four feet apart in the row. Tomatoes should be sprayed at least once with Bordeaux mixture. About 3500 plants plant an acre.

Varieties:

Greater Baltimore and Bonnie Best.
