Seeds of Success

"Everything for the Golf Course"

1930

J. OLIVER JOHNSON INC.
MORGAN HURON SUPERIOR STREETS
CHICAGO, ILLINOIS

To the Trade

THIS edition of our General Catalog No. 10, cancels all previous issues. Owing to fluctuations in factory costs and changes of seed market, bulletins will be issued from time to time to promptly bring before the trade new goods of merit and also for the purpose of giving immediate advice of price changes.

Everything for the Golf Course

IN PREPARING this booklet of golf course accessories and supplies, we have endeavored to deal with the various subjects in an advisory as well as a merchandising capacity. Service and suggestion to golf club officials in connection with the upkeep of their courses are available here in the fullest measure. We pride ourselves on being able not only to supply you with the proper grass seeds, fertilizers and equipment, but to advise you correctly concerning those best suited for your particular needs. If necessary, our Service Department will send a personal representative to aid in solving your problems.

To this policy of thorough co-operation, we attribute our continued growth throughout a quarter of a century of such service. The arrival of the 1930 Spring Seeding Season finds us, as usual, ready to ship the necessary grass seeds, fertilizers and equipment for your course direct from stock. A larger selection than ever before is offered, and if it should happen that items not listed are needed, we shall be glad to render our usual assistance in obtaining them.

Demonstrations for Golf Club Officials at Our Show Rooms

FOR some years we have maintained very complete show rooms and demonstrating rooms in our main Chicago plant, which is illustrated above. Local or visiting Chairmen of Greens and Greens-keepers are invited to call at these show rooms whenever they wish and examine the complete line of golf course construction and maintenance equipment.

Golf club officials have found this service exceedingly valuable. As a rule, considerable time is spent studying catalog specifications—often without a final decision being made. A personal inspection of the materials and equipment not only will make the decision and the choice much easier but will result in final satisfaction.

During your visit we shall be glad to conduct you, if you desire, through the

warehouse, where you will see thousands of pounds of both domestic and imported varieties of grass seeds. Methods of handling and cleaning these will gladly be explained.

How to Reach Our Main Plant

By surface cars: From loop take Milwaukee Ave. car to Morgan Street; or north and south-bound cars, transfer at Chicago Avenue, get off at Morgan, then one block south.

By autos: New Ogden Avenue Boulevard from north or south to Chicago Avenue, then east to Morgan.

Away from loop traffic—ample parking space.

From State and Madison Streets we are 1000 west and 700 north.

Grass Culture

MANY conditions, differing in various localities, must be taken into consideration in the development of a satisfactory turf. Hence, it is almost impossible to give blanket advice covering each case as a whole. The general information we give, however, will be found to apply generally. Such factors as character

of the soil, fertilization required, regulation of moisture, weed growth and the use of quality seeds, obtain at all times. Proved and practical methods should always be followed, as satisfactory results never can be accomplished from slipshod work.

There is one rule which always applies

Don't fail to visit our show-room

in the purchase of seeds: It never pays to select any but those of known quality. When you come to consider the labor, cost of planting and the additional expense of re-planting and extra attention if first results are not satisfactory, it will be found that the very best grade of seeds represents the most economical investment.

Our Service Department is at your command at all times to give personal assistance in solving your problems and to assist in the selection of proper seeds. If you wish, our representative will render written report of personal inspection. This service is gratis, and will be found a valuable source of accurate information for each individual case.

The producing of dense-growth putting-greens and fairways is not a matter of chance, but of close supervision of soil mixtures involving ideal capillary action, thus promoting resiliency of the turf, proper use of fertilizers, judicious use of tiling for sufficient drainage and immediate elimination of factors tending to later cause embarrassing delays.

In the selection of a site, such features as rolling land, hillsides and flat fields all contain different soil analysis. The loam conditions of each can be corrected by the use of sand, clay, humus and well-rotted horse manure mixed in proper proportions. This top-soil should be raked or fallowed until it is mellow.

Seeding of putting-greens will be found quite different from that of the fairway. The expense of preparing the green being greater, due to a limited area, than the fairway of given space, it is well to consider the seeding of the very best. Grasses for greens must be fine and dense,

and able to withstand constant wear and treading. The selection of various grasses, such as Bent Stolon, Chewings Fescue, Red Fescue, Creeping and Rhode Island Bents is a matter of personal likes. The method of sowing is similar to that followed on fairways. Broadcasting will prevent the seed from forming ridges of grass which would divert the ball in its course. Do not be sparing in the use of seed, as a dense, even turf is desired in as short a time as possible. The use of seeders of the broadcasting type for fairways is always advisable, due to the uniform work performed.

MILORGANITE (listed on p. 7) will do wonders for new turf. This fertilizer assists in quickly establishing dense, heavy turf on new fairway seedings. Unfertilized seedings on poor soil invariably fail or result in a thin, disappointing stand of grass, difficult to improve by subsequent fertilization or seeding. Even on good soil, a reasonable expenditure for fertilizer will hasten establishment of turf and enable earlier play. The cost of fertilizer, compared with the cost of seed and soil preparation, is so small that new seedings should always receive fertilizer prior to seeding. At this time, fertilizers can be easily worked into the surface soil by discing and harrowing. This insures an abundance of plant food in the soil layer occupied by the root system.

GREENSKEEPERS' EMPLOYMENT

We have in our files at all times the names of a number of capable greenskeepers whose services are available. We shall be glad to assist anyone in need of such help by putting them in touch with these men.

Characteristics of Grass Seeds

Complete stock on hand at all times

Johnson's Recleaned Grasses

SHEEP'S FESCUE (*Festuca Ovina*)

Thrives well in sandy, shallow soils. Used extensively for polo fields. Weight, 20 lbs. to bushel.

HARD FESCUE (*Festuca Duriuscula*)

Will resist drought and stand hard usage. Should not be sown alone, due to its tendency to stool. Very useful on polo fields. Weight, 20 lbs. to bushel.

VARIOUS LEAVED FESCUE (*Festuca Heterophylla*)

Produces an abundance of fine roots and slender growth, forming an excellent turf. Good shade grass. Weight, 17 lbs. to bushel.

CARPET GRASS

Southern Gulf Coast adaptation. Best adapted to low lands.

CANADA BLUE GRASS (*Poa Compressa*)

Useful for fairways of Northern States. Very hardy, and will withstand droughts. Weight, 24 lbs. to bushel.

BERMUDA GRASS (*Cynodon Dactylon*)

A Southern grass that thrives well in hot climatic conditions, south of Virginia. Weight, 37 lbs. to bushel.

CREEPING BENT (*Agrostis Stolonifera*)

South German—an invaluable grass for golf greens; long creeping stems and roots, producing a very durable turf that will withstand severe usage. Weight, 20 lbs. to bushel.

JAPAN CLOVER

Southern adaptation.

Familiar Grasses

CRESTED DOG'S TAIL (*Cynosurus Cristatus*)

Very good in mixtures, forming a clear, dense growth and producing a tough turf of attractive color. Thrives best in Northwestern States. Weight, 23 lbs. to bushel.

ITALIAN RYE (*Lolium multiflorum*)

Annual or short-lived perennial, distinguishable in the turf form from Perennial Rye-Grass only by the blade being convolute in the bud. Grows well in any soil. Weight, 24 lbs. to bushel.

CHEWINGS FESCUE,

NEW ZEALAND (*Festuca Chewings*)

Considered one of the best grasses for putting-greens; used and recommended for either fairways or greens. Produces a mass of fine root leaves; branches being extra-vaginal, plant will spread, making a solid, compact turf. Adapts itself to poor soil. Weight, 24 lbs. to bushel.

MEADOW FESCUE (*Festuca pratensis*)

Slightly coarser than most grasses. Very durable. Better known as English Blue Grass. Weight, 24 lbs. to bushel.

RED TOP (*Agrostis Alba*)

It is a perennial, with creeping habit. Makes a medium loose turf. Grows under a great variety of conditions. Best wetland grass among "tame" species. Grows on soil very poor in lime. Strongly drought resistant; used for holding banks to prevent erosion. Chief uses: 1—Sour land grass. 2—Fairways under humid conditions—soils other than limestone. 3—Soil binder.

WHITE CLOVER (*Trifolium repens*)

Used to a great extent in lawn mixtures, but is not usually welcomed on golf courses. Grows well on poor soil, forming a close, dense mat, and will withstand close clipping. Weight, 60 lbs. to bushel.

KENTUCKY BLUE GRASS (*Poa pratensis*)

The most noted grass in America. Naturally a native of the Old World, having been early introduced by the early colonists. Seed is harvested mainly in Kentucky, but more or less in Missouri and Iowa also. Seed of highest germination must be dried carefully and then cured during the winter. The grass has creeping underground stems each bearing a tuft of leaves at the tip.

PERENNIAL RYE GRASS (*Lolium perenne*)

Short lived perennial. Seed bed should be prepared as for other grasses. A fine mellow surface on compact subsoil gives best results. Does especially well when seeded in autumn. Its ability to grow rapidly allows plants to become well established before freezing occurs. Much coarser than other varieties.

RED FESCUE (*Festuca Rubra*)

Leaves are bright green; does not grow tufts but creeps by underground stems. Only two varieties are used on golf courses—RED FESCUE from Europe and CHEWING FESCUE, native of New Zealand. Withstands more shade and account of fine quality of turf, particularly adapts itself to sandy soils.

SEASIDE BENT (*Agrostis Maritima*)

A high grade bent seed grown on the Pacific Coast and sold under various trade names.

Does very well all over the northern half of the U. S. and forms a close uniform turf of fine texture and color.

We ship direct from stock

Johnson's Golf Mixtures

Golf Mixtures F. O. B. Chicago, Freight Allowed, Orders for Seed Shipped Same Day Received

JOHNSON'S FAIR GREEN

A combination of the best heavy weight domestic and imported grasses. The cream of the crop. Desired and recommended by many of the best clubs. Experienced greenskeepers claim this is the best mixture they have used.

JOHNSON'S PUTTING GREEN

Absolute satisfaction has followed the use of this well known mixture. Producing a dense growth of deep-rooted varieties, forming an excellent putting green. Will "crown" well without loss of vitality.

CALUMET FAIR GREEN

This excellent combination will produce results on your fairways. A domestic mixture selected for purity, showing the highest possible germination.

FOREST PRESERVE FAIR GREEN

Well known and used by exacting clubs that demand the best. This mixture, consistent with cost, is an excellent producer.

SPECIAL FAIR GREEN

A moderate priced quick producing mixture, especially adapted for initial seedings, where a solid, compact turf is desired for early season play.

CHOICE FAIR GREEN

A very quick producer, where initial turf is desired in hilly spots subject to erosion.

Creeping
Bent
Nursery

Creeping Bent Stolons—Agrostis Stolonifera

Propagated by the vegetative method of planting stolons which are grown in nurseries especially equipped for the purpose. True creeping bent is a turf grass that spreads by creeping stems or stolons on which are joints at short intervals. These stolons, when broadcasted on the surface of the ground and covered with a light top-dressing, take root at the joints or nodes and form individual plants from which grow more runners or stolons that cover the ground very quickly. This characteristic of propagating itself gives creeping bent turf-forming qualities not equalled by any

other grass. This is a decided advantage, as any injury to the turf is quickly healed by the creeping runners. It is adaptable for northern states. Its southern possibilities have not yet been fully determined. There are many strains of creeping bent on the market, but only two or three that have the desirable turf-forming qualities for putting-greens and at the same time the ability to resist to a great extent the ravages of brown patch and other grass diseases. Creeping bent turf has the reputation of having never been known to winter kill.

Due to fluctuations in the seed market, prices are subject to change without notice. A current list will be mailed upon request.

Johnson Bent Stolon Cutter

We recommend this machine for cutting up "Bent Stolons" or Bermudas. Can be used by hand or with light power. The 10-inch diameter, 4-inch face pulley is furnished when ordered, at extra charge.

Frame is built of hardwood with mortised joints and is well braced. This cutter is fitted with two knives 10½ inches long.

When used as a power cutter it requires 1 horsepower, speed of cylinder about 300 R. P. M. Weight, 280 lbs.

No. 5—Hand power only	\$20.00
No. 10—Hand or power, 2-knife	35.00
No. 10½—Power only, 3-knife	45.00

Milorganite

Milorganite appeals to the greenkeeper because it imparts a deep green color to the turf, promotes long continued vegetative growth, and does not burn or injure the turf.

Furthermore, due to its dry granular mechanical condition Milorganite is easily applied to greens and fairways.

Milorganite sustains long continued growth on old turf, and quickly produces

3000 TONS USED IN CHICAGO AREA ALONE LAST YEAR.

dense turf on new grass seedings, is free from objectionable odors, harmful bacteria and weed seeds of all kinds.

Milorganite contains $6\frac{1}{2}$ per cent nitrogen (equivalent to ammonia) and $2\frac{1}{2}$ per cent phosphoric acid.

F. O. B. Chicago

Urea

Urea is the purest and richest nitrogen plant food on the market. Contains 56% ammonia. Use only $\frac{1}{3}$ as much as other fertilizers.

Price 143 lb. bag \$15.50 F. O. B. Chicago

Tobacco Dust

Tobacco is high in potash and tests 24—1.0—4.5 and has 1.5 nicotine which discourages ants, worms, etc., and kills soft bodied insects by contact.

Per ton, F.O.B. Chicago.....\$50 00

Calogreen

A finely powdered calomel for the cure of small Brown Patch also gives a prolonged protection with no danger of burning the grass. Use 3 oz. per barrel of water to cover 1000 sq. ft.

Price, 5 lb. boxes.....	\$2.77 lb.
25 lb. boxes.....	2.57 lb.
50 lb. boxes.....	2.56 lb.

Calo-Clor

Calomel with corrosive sublimate for the cure of both large and small Brown Patch and the eradication of earth worms. Cheaper to use, fewer applications. Use 3 oz. per 1000 sq. ft. of green.

Price, 5 lb. boxes.....	\$2.90 lb.
25 lb. boxes.....	2.70 lb.
50 lb. boxes.....	2.65 lb.

Arsenate of Lead

Experiments over a period of six or seven years show no harmful reaction to turf.

Five pounds per 1000 square feet will eliminate Worms and Grubs and show a decided check in Poa Annua, Chickweed, and Crab Grass.

Due to fluctuation of market, prices on application.

Complete stocks at all times

NU-GREEN (Combination disinfectant and fertilizer)

NU-GREEN is a combination of Brown Patch Disinfectant and a Fertilizer. No need of the bother and inconvenience of mixing the ingredients yourself. No fear of unbalanced quantities of disinfectant and plant food. No danger to grasses from improper mixture.

To prevent Brown Patch from putting in an appearance, once each ten days or two weeks, beginning prior to the Brown Patch season apply a solution of one pound Nu-Green to 50 gallons of water. Use at the rate of 50 gallons of solution to 1000 square feet of green area.

By using a power sprayer good results have been obtained by using 1 lb. Nu-green in 50 gal. water to cover 2500 sq. ft. A prevention application once a week.

As a Cure if you have Brown Patch use one pound in 35 gallons of water and use at the rate of 50 gallons of the solution to 1000 square feet.

F. O. B. Chicago

SEMESAN for "Brown Patch" Control on Golf Greens

The principal ingredient of Semesan is a complex organic substance, made from carbolic acid, chlorine and mercury, which is known scientifically as hydroxymercurichlorophenol or, more popularly, as chlorophenol mercury.

With this extremely effective chemical are compounded certain other substances that intensify its disinfecting properties and make it possible to apply Semesan by the quick convenient and non-laborious method of water solution treatments.

Semesan possesses highly selective toxic qualities, by virtue of which it is deadly poisonous to the lower forms of life, such as the "Brown Patch" fungi, yet at the same time harmless to the higher types of life to which the grasses and plants belong. In fact, authorities now recognize that its effect upon seeds and plants is stimulatory and in no way injurious, as is corrosive sublimate.

Unlike other disinfectants and fungicides, such as Bordeaux mixture, Semesan may be used as frequently as conditions demand without accumulating in the soil as a poison detrimental to the purpose for which it is employed.

1 lb. tin	\$ 2.75	100 lb. drum.....	\$220.00
5 lb. tin	13.00	300 lb. drum.....	645.00

"HERBICIDE"

THE WEED EXTERMINATOR

*For Paths, Cobble
Gutters, Drives,
Tennis Courts etc.*

"When diluted 1 part to 40 parts of water, HERBICIDE destroys both the tops and ROOTS of undesirable vegetation. It is used to great advantage by golf clubs for keeping weed growth out of sand traps. It is also used extensively by cemeteries and parks for keeping drive-ways and paths free from weeds. HERBICIDE gets rid of weed growth without disturbing the surface of the ground and is therefore a great help for use on tennis courts." 1 gal. mixture covers 2 to 3 sq. yds.

Thompson Spreader

The old reliable Thompson Spreader improved to handle all of the modern commercial fertilizers. Spreading range 1 to 10 lbs. per 100 square feet. Spreads 6 feet wide as fast as a man will walk, in any quantity desired. Will hold 100 lbs. to 150 lbs. of Milorganite or similar fertilizer.

The wheels have a 3" face and will not injure the finest turf.

All materials are released to the scatter-board with a force feed broadcasting motion, and leaves the scatter-board 6" from the ground.

No. 208, F. O. B. Chicago \$50.00

No. 110—Smaller than the No. 208 and intended for lighter work, especially for the application of chemicals such as Semesan, Arsenate of Lead, etc. with sand or other material as a carrier. Will hold 1½ bu. of fertilizer.

No. 110, with scatter-board \$27.50

No. 110, without scatter-board 25.00

No. 112—This spreader is the same design as the No. 110, but reduced in size. The hopper is 30" wide and is intended for lighter work than the No. 110.

Price, F. O. B. Chicago \$13.50

No. 235 Fertilizer Distributor

The No. 235 distributor is one of the best on the market, and will handle grass seed, Milorganite and all commercial fertilizers. Used extensively for spreading Arsenate of Lead with Milorganite. Hopper holds about 100 lbs. Tire is 4" wide. Machine is very accurate and spreads material evenly.

Price, F. O. B. Chicago \$45.00

Endgate Spreader

Fits on any wagon box, is driven by a sprocket on wheel. Will spread any prepared fertilizer up to 20 feet in width and from 150 lbs. to 5 tons per acre. Handles Milorganite, Ammo-Phos, 6-3-2, etc. Especially made for a rapid fairway spreader.

ES1—Price \$33.50

Prices subject to change without notice

Fertilizer Distributor

For commercial fertilizer, sheep manure, etc. Wide wheels, convex tire, wobble type agitator, distributor board 3 feet wide. Adjustable screw, hand control, light weight, positive feed. Can be used as grass seeder.

FD-1 ----- \$20.00

Johnson Sprinkling Cart

For applying Ammo-Phos, Semesan, Sulphate of Ammonia, worm eradicators, etc., in liquid form. More economical as to labor and fertilizers than the ordinary watering can. Flow and shut-off rod from rear.

SPECIFICATIONS

Barrel, Wood, 50 gallons—Painted green and white.
Chassis, Steel construction.
Wheels, Steel, 36 in. high.
Tires, 4 in. wide—flat.
Boom, 7 ft. wide—holes drilled 1 inch apart.
Valve, Brass—can be adjusted by operator from rear.

BSC-1—Price, \$30.00, F. O. B. Chicago.

Eureka Sprayer

The Eureka is intended for golf courses that want a good practical outfit at a reasonable price. It is built for hard service. Develops a working pressure of 200 pounds and is equipped with a large air pressure tank, to maintain a high pressure and steady discharge. It can be used on bent greens, in orchards, flower gardens, shrubbery, vineyards, gardens, stock barns, cattle pens, hen houses or for white-washing, cold-water painting, disinfectants, etc. It is made in the hand drawn style as shown.

Pump—Our regular No. 4 is used, mounted on side of barrel.

Tank—50 gallon welded steel barrel. This avoids the common trouble experienced with wood barrel of drying and warping when not in use so that it is impossible to make it tight again.

Pressure Tank—Boiler steel with welded seams; tested under a pressure of 275 pounds. Fitted with pressure gauge reading to 200 pounds.

Wheel—30 inches diameter, 2 inch tire. Fastened to tank with heavy bolts.

Frame—Steel tubing, handle of same material.

Discharge Equipment—4 ft. of 1/2 in. spray hose, a 4 ft. iron pipe extension, angle Ideal spray nozzle and leakless shut-off valve.

Shipping Weight—Securely crated, No. 22, 235 lbs.

U. S. No. 22. Hand drawn as shown.

Price ----- \$50.00

Toro Golf Course Equipment

Toro Standard Push Tractor

Consisting of the Toro tractor complete with 3 or 5 mowers. Is entirely flexible. will cut slopes, sides of bunkers, saucer shaped depressions; in fact, any part of the course. The tractor is powered with a heavy duty tractor motor and comes complete with magneto, governor, brake and air cleaner. All bearings are heavy duty tractor roller or ball bearings; gears are nickel steel of the finest possible workmanship.

Tractor may be started on the steepest hill without injury to the turf. Grass is all cut before the tractor crushes it down, insuring a clean fairway. Operator can see his mowers at all times. **THIS OUT-FIT MAY BE BACKED UP. MOWERS WILL NOT TANGLE UP.** Has a new

steering device whereby all steering is done by power, and so easily a child can steer it. In fact, handles easier than a car. A belt pulley may be had for this tractor.

Toro Universal Tractor

This tractor is the same as the one above, except is a pull type instead of the push. Has the same heavy duty long-lived motor with governor, brake, magneto and air cleaner.

The same high quality of workmanship and materials will be found.

This machine will do all the construction work as well as cutting and general up-keep duties, and will not injure the course. With this magneto-equipped machine all need of "hot shot" batteries is done away with, as it will start on one turn of the crank in coldest weather. This machine is the lowest in gas and oil and general up-keep expense that we know of, and we absolutely guarantee it in every way.

Toro Whippet Tractor

In the new TORO WHIPPET we have built a thoroughly satisfactory and efficient machine from every conceivable operating angle, and along with it, have provided a smart, distinctive appearance that will match the beauty of your Club House and Grounds. Mechanically the new TORO WHIPPET is far in advance of any of the present light weight Golf Course Tractors. The motor is of modern design, four cylinders, with an SAE rating of 15.6 horse power, but with an actual break horse power of 31.

Three speed sliding gear transmission, electric starter and generator, four wheel brakes, three gallon radiator with pump circulation and aeroplane type fan.

The TORO WHIPPET is made in two styles, the standard comes complete with a stationary box as pictured. The SPECIAL WHIPPET comes without the box and with a one foot shorter wheel base.

Toro Junior Tractor Model 30

The new Junior tractor is motored with a heavy duty MODEL A FORD MOTOR 39 H. P. with a large fund of reserve power. It is furnished complete with starter, generator and battery. The rear axle is a heavy bevel gear axle built especially for heavy pulling and will transmit full possible drawbar horse power without over-straining the axles. The axles are 50% larger in diameter and have more than $2\frac{1}{2}$ times the driving strength than the shafts in an automobile axle.

Frame is Toro built of 5" channel iron and is spring mounted reducing road shocks.

Dump body is all steel of one yard capacity and angle of dump is such that material slides out cleanly.

Front wheels are 7x27, Rear 15x30 with rolled edges with 144 spikes each. 3 speeds forward and one reverse. Maximum speeds: low 4 miles, 2nd, 8 miles, high 18 miles per hour.

TORO GOLF COURSE EQUIPMENT—Continued

Toro Flexible Pull Frame Mower

This mower is the most flexible outfit on the market. At a moment's notice may be changed from a 5 to a 3 by simply removing two outside units and wings. For narrow places outside wings may be raised, allowing outfit to go through a 9-foot space. Wings lifted with a winch.

All units are full floating and will conform to the contour of the ground, insuring an even, clean cut. Due to the heavy, rugged construction of outfit it is a good rough mower and will stand up where others go to pieces. Will fit any make of tractor.

Toro "Park Special"

This 30-inch, one-man mower is operated by a gasoline engine and is supplied with either sickle bar or reel. The same reel is used as in the Toro Super Mower, and the entire machine, while light in weight and easy to handle, is supremely efficient. The sickle attachment is readily attached or detached and affords the easiest possible means of dealing with those patches that formerly required either men with scythes or horse-drawn farm machines. Will also do all the regular cutting and trimming about the place.

Toro Del Monte Greens Rake

Here is the new Toro Del Monte Greens Rake, which is the best tool we have ever seen for raking up bent greens. It is named in honor of Mr. Joseph Mayo, Superintendent of Pebble Beach Golf Course, Del Monte, California, who first suggested the idea to us.

Exhaustive tests have proven conclusively that it is the best device of its kind for raking and aerating bent greens, and we earnestly suggest that you send us your order for either one or a full set.

Price, F. O. B. Chicago.....\$15.50

The Toro Greens Brush

This brush is similar in action to a lawn mower in that the brush revolves at high speed and causes the grass to be lifted in an upright position. It is highly successful for taking grain out of Bent Grass, also for stimulating the growth, removing worm casts, and working in top dressing. It is a handy and very efficient tool for cultivating a good stand of turf on either greens or tees. It is particularly advantageous for use on any kind of Bent.

Price, F. O. B. Chicago.....\$34.50

Justrite Motor Driven Mower Sharpener

No. JR-1

THE JUSTRITE LAWN MOWER SHARPENER will sharpen any make of hand or power driven lawn mower and will sharpen them quicker and better than any device known. It is not necessary to remove the roller or handle, in fact only one wheel is removed and the lawn mower placed in the machine ready to start sharpening. The JUSTRITE process of sharpening with emery and oil the reel knives and cutter bar is the only practical method to accurately sharpen a lawn mower so that it will produce a smooth, easy running, cutting lawn mower.

Pennsylvania Lawn Cleaner

This machine will remove from the lawn not only the cut grass, but all sorts of litter and leaves and trash, leaving the grass standing upright and free from foreign matter that prevents the sunlight and dew from getting to the roots.

The brushes are recommended for removing worm-casts from putting greens, tennis courts, bowling greens and other close-cut lawns, where a smooth surface is essential. It can also be used as a lawn or sidewalk cleaner for removing leaves and other litter.

Provision is made for adjustment to take up the wear of the brushes, thus insuring the same efficiency of the sweeper until the brushes are entirely worn out.

The change from rakes to brushes, or vice versa, is easily made without taking the machine apart.

Width, 24 inches.

Detroit Rough Mower For Fordson Use

Also as shown above for cutting side of bunkers. Will save labor of four teams, wear and tear on revolving reel mowers, cut 50 acres of rough as low as 1 inch in height in one day. Extreme simplicity. No change in Fordson necessary, no changes on worm gear, no tractor oil to drain. Assembled in 30 minutes. Flexible in all capacities, cutting bunkers, or hills and can be set up as shown without impairing use of Fordson. Cutter bar always in plain view of operator, mowing bar 6 feet long. Coil spring in front drag bar absorbs shocks when running into stumps. Power taken directly from the pulley gear—mower runs at motor speed, not wheel speed. All gears and shafts automatically oiled from Fordson. It fulfills a most valuable service to golf courses, race tracks, baseball diamonds, polo grounds, sub-divisions, parks and cemeteries. Further circular information on request.

The JOJ Sod Cutter

This machine is meeting with high endorsement among greens keepers and others, and has proved to be a great success. Operates at a low minimum of cost. Cuts the sod of uniform width and thickness, in any length, so that it is particularly adapted to giving solidity to slopes in cuts and on embankments, working equally well on level or uneven surface, cutting both ways with the land, and leaving no sod uncut.

One machine will cut from 30,000 to 40,000 square feet per day, thus doing the work of forty men.

No. SC-1—Price, F. O. B. Chicago.....\$34.00

Horse Lawn Boots

For Use on Golf Links, Tennis Courts and Fine Lawns

The sole is hardened, filled with steel rivets and made waterproof. The construction is entirely with rivets—no stitching whatever. Fastened to the horse's foot, not to the ankle, giving free action and no chafing.

No. 2 boot measures inside (extreme width) 5½ in. Correct size for No. 2 horseshoe.

No. 4 boot measures inside (extreme width) 6½ in. Correct size for No. 4 horseshoe.

No. 6 boot measures inside (extreme width) 7 in. Correct size for No. 6 horseshoe.

No. 4 size generally used. Larger sizes to order.

The Meeker Discing Machine

Designed for use on golf courses, park surfaces, and private estates where the grass either is not growing on account of the roots being choked and parched, or where it is desired to reseed without going to the expense and trouble of entirely tearing up the sod by plows or other heavy implements.

The machine, complete, has three sections, but the sections can be used as a single unit.

Each section frame measures 6' 8" long x 3' wide, and each section has four sets of rollers, with 30 steel cutting wheels, 8" in diameter, which can be set at a slight angle where it is desired to scarify the turf for reseeding, or can be set straight where the intention is merely to cut the runners, or to break up the grass to aerate the roots. Where the soil is hard, the machine is capable of being burdened up to 1,000 lbs.

MD-3—Price complete (F. O. B. Chicago), Three Sections.....	\$90.00
MD-1—Price, Single Sections (F. O. B. Chicago).....	30.00

Imported Scotch Chain Harrow

Greenskeepers on golf courses state it is the most valuable implement on the market for surface pulverizing and leveling. It is far superior to the average disc or tooth harrow, as it not only pulverizes the soil thoroughly, but also fills in all inequalities in the ground, thus insuring a smooth, even surface for seeding grass.

As the final surface smoother on grading jobs, it is without an equal, for it obliterates all motive power marks completely. This implement has been in use for years on race tracks, driveways, golf courses, etc., for smoothing out footprints and ruts.

The heavy links are fashioned by skilled workmen in Scotland from solid wrought iron and are therefore very durable. When not in use it may be rolled up completely, so as to occupy a minimum amount of storage space.

ON ALL SPRINKLERS—STATE SIZE OF HOSE USED

Buckner
No. 303 Sprinkler

Long arm covers 3600 to 4900 square feet on pressure of 40 to 60 pounds. Very efficient when wind is a factor. One inch connection.

Price, with roller stand.....\$16.00

Golf King No. 6

This BUCKNER Sprinkler is the last word in greens sprinklers and will cover a greater area with more water than any other sprinkler we have tested. It is ideal for both fairway and putting green work, has slower motion and will cover greater area than any other sprinkler. Will cover 90 to 160 feet diameter on pressure 40 to 100 pounds, distributing uniformly 10 to 48 gallons per minute over this area, without run-off or flooding. It has been thoroughly tested and approved by the best known architects and greenkeepers.

This sprinkler is by comparison with other sprinklers that have gone before, a most remarkable sprinkler. It is revolutionary, as it is perfect in action under all conditions and will last longer than any other sprinkler ever designed.

No more delicate gears, triggers, flappers, vibrators, jumping jiggers or fast whirling freak parts to wear out or get broken off. Such contraptions work fine for a while, but experience is the best teacher and we have discarded the spectacular. Save money, labor and grief. Order GOLF KING No. 6 for either fairway or putting green work. State size of hose and amount of pressure.

Buckner Golf King No. 2

(at Left)

Another popular sprinkler of the geared-head type. Positive in action, with good distribution.

Price, with roller stand.....\$23.00

STOLON SPRAYERS—SEE PAGE 41.

Golf Course Hose Cart

Golf King Automatic Valve

Designed for Hoseless Systems. Self closing under any pressure. Rigid Quick Coupler. No leaks or wash when attaching or detaching. Connection is instantaneous.

Buckner originated the Hoseless System of golf course irrigation and the rigid quick coupling for connecting sprinklers and hose to systems instantly. And now we have the AUTOMATIC GOLF KING VALVE and QUICK COUPLER. This is a self closing valve allowing no leakage on hillsides or elsewhere. Effects great saving in expense by eliminating many control valves and service leads, as well as all hose and other upkeep cost.

The system is invisible and permits the use of one or any number of sprinkler at any point on the course without running around to open and close valves. Simply snap the sprinkler or the hose—where hose is used—to the valve in five seconds. This automatically opens the valve. Disconnect the sprinkler and valve automatically closes. No valve boxes required. No obstructions or hazards in the fairway. Mower or roller passes over without damage.

Valve only	\$4.25
Quick Coupling only	3.25

Lewis Golf Ball Washer

The most popular place at every tee centers around the *Lewis Golf Ball Washer*. Golfers and caddies like to see the muddy, grass-stained ball come out of the *Lewis Golf Ball Washer* gleaming white — and what's more, no matter how many times the *Lewis Washer* is used, the paint doesn't come off. A word to the wise, use soap. Under no condition should sand be used.

Most Clubs have the LEWIS

... at every tee. The members of your club deserve this pleasant economy.

Golf Books

THE LINKS—By Robert Hunter

This is one of the latest contributions to Golf Architecture and contains numerous new ideas on the layout and construction of Golf Courses.

THE LINKS has 163 pages with 48 pages of illustrations showing some of the outstanding Golf Architecture of world famous Courses.
Price, each\$4.00

Golf Architecture in America—By George C. Thomas, Jr.

This is another late book on the layout and construction of Golf Courses and contains many illustrations and layout plans of the foremost courses in the Old Country and in America.

Price, each\$5.00

Turf for Golf Courses—By C. B. Piper & R. A. Oakley

This book is one of the best, in fact, the only book dealing with the care and maintenance of Golf Courses published at the present time.

TURF FOR GOLF COURSES goes into the details of various turf seeds and their care as well as other maintenance problems.

Price, each\$2.50

The A. B. C. of Turf Culture—By O. J. Noer

This book, we believe, to be the very best on turf culture and fertilization. It goes very thoroughly into the subject of fertilization and is very plain and to the point.

Price, each\$3.00

The Sturdie Tee

This tee has been designed to give the utmost in service. It is sturdily built and can be used repeatedly. It is easily pushed into the turf and yet will provide a steady support for the ball at the height you like best. Packed 1000 per case either in red or yellow.

Price per 1000\$2.50
Quantity prices upon request.

Thomas Rough Mower

This mower is built for high speed tractor work. Has a 6 foot bar and will cut 3 acres per hour. Operated by man on tractor. Attached or detached instantly. Hyatt roller bearings. Two speed sickle.

Price,
F. O. B. Chicago.....\$150.00
