VEGETABLE SEEDS

We continue our long established policy of offering only the highest grade seeds because we are sure it pays our customer as well as ourselves, to plant the best seed obtainable. However, in accordance with the universal custom of the seed trade, we give no warranty, express or implied, as to description, quality, productiveness or any other matter of any seeds we send out, nor will we be in any way responsible for the crop.

Orders of \$2.00 or over are subject to a discount of 5% for cash with order.

This vegetable resembles the cauliflower. The plant forms a large, solid head which remains green. Why Not Grow Melons?

Trial plots of the department of vegetable gardening at M.A.C. during the past four years have shown quite conclusively that muskmelons can be well grown in this section of the state.

Various cultural methods have been followed in the tests and approximately 70 varieties and strains comparatively studied.

The two varieties which are the most outstanding sorts and are the ones recommended to be grown are: Lake Champlain and Bender's Surprise.

In culture the most outstanding factors recommended are the use of liberal quantities of manure and commercial fertilizer, the use of plant protectors in the spring, the use of a good grade mulch paper, and the consistent and thorough practice of spraying with Bordeaux mixture.

ANNUAL FLOWER SEEDS (STANDARD VARIETIES)

Annuals are those which go through all stages of their growth in the open ground, from germination to the final seed ripening. They form a very useful class, and are valuable for garden decoration, filling gaps in the perennial border, and for cutting.

The greatest cause of failure in the growing of annuals is due to their not being sufficiently thinned. Dwarf sorts should be thinned to about 4 inches apart, intermediate sorts to about 6 inches, and taller varieties from 10 to 15 inches.

Half-hardy Annuals should be sown under glass in March and transplanted at an early stage to prevent their becoming "leggy", usually being hardened off before putting in the open ground.
