MONTICELLO NURSERY COMPANY

MONTICELLO

FLORIDA

MAHAN Pecans

ACTUAL SIZE

Its giant size, thinness of shell and superior quality of meat won first prize for the Mahan pecan in a worldwide pecan contest supervised by the Texas State Agricultural College.

Mahan trees are exceptionally vigorous.

The Mahan nuts run about 61% meat and the meats analyze about 69% oil, giving the meats a wonderful, rich flavor.

Increased Land Values With Pecan Trees

The pecan tree is the greatest food engine in all nature and the nut growers of the future will be the ARISTOCRATS OF THE AGRICULTURAL WORLD.

Even a few pecan trees planted around the stable, cow lot, chicken yard, and in the garden, will in a few years give the owner MORE NET PROFIT than all the other crops on the average small farm combined! There is nothing that will give as big a return for as small an investment as to plant pecan trees.

They Grow in Clusters

Actual photograph of Mahan Pecan top-worked tree, grown at Texas A. & M. College, College Station, Texas. Note the five large nuts; such clusters are not unusual on Mahan trees. Note how luxuriant the Mahan foliage is.

What they Say About MAHAN Pecan Trees

MAHAN WINS FIRST PRIZE

In December, 1925, just after buying the parent Mahan tree, we entered the Mahan pecan in a World-Wide Pecan Contest that was held at College Station, Texas, under the auspices of the Texas A. & M. College. All pecan growers of the world were invited to enter this contest. The following letter gives the results of the contest.

Mr. F. A. MAHAN,
Monticello, Fla.,
Dear Sir:

Enclose find check as a prize for the BEST PECAN in a World-Wide Contest. The Mahan is the best pecan, judged from ALL standpoints, that we have any record of. If it does as well here as the ones you sent, your fortune is made.

(Signed) D. F. MOORE.

(We had won this same prize at the previous contest in 1921 with a Schley, before we purchased the Mahan, and as the contest has been held only twice, we are the only firm that has ever gotten this prize.)

Dec. 20, 1925.

Lake County Groves Corporation, W. C. Daniells, Manager, Eustis, Fla.: "All of our Mahan trees are doing very well, have made a nice growth, and seem to be strong and thrifty. As far as we can see they are the most thrifty pecans we have ever used."

Culledge Brothers, J. H. Culledge, Verbena, Ala.: "A year ago we put out ten Mahan trees, all of which grew off better than any trees we have ever set. This is no surprise to you as I have heard of other similar reports during the past winter. Two of our trees are bearing this year, one tree having ten nuts and another eighteen. Can you believe such a report? The nuts are in clusters of three each."

J. A. Kernodle, Proprietor Pecan-Ole Farm, Camp Hill, Ala.: "After careful examination of the Mahan Pecan, I unhesitatingly call it 'perfection and the ideal nut.' The meats are as fine as the Schley in quality and much larger.

"I bought two trees and one of them has nuts on it now, its second year, and both have made unusual growth. I have 24 varieties and have taken first prize in all fairs I have entered."

Harvey Mosty, of Mosty Brothers, owners of Kerryville and Center Point Nurseries, Kerryville, Texas.: "We are just in receipt of pecan samples recently sent us. Would like to know where in the world you ever got the samples marked 'Mahan,' they are certainly wonders."

THE TEXAS DEPARTMENT OF AGRICULTURE, in their Bulletin No. 95, on "Pecan Growing in Texas," has this to say about the Mahan Pecan:

"The Mahan is a large nut with very thin shell, resembling the Schley quite a bit and seems to be of just as high quality, but is somewhat larger than the Schley. A good individual nut, and should be tested further."

The same Bulletin shows actual size photographs of practically every variety of pecan, the Mahan being the largest of them all.

J. G. Woodruff, Associate Horticulturist, Georgia Experiment Station, Experiment, Georgia, says of the Mahan:

"I have had occasion to examine the botanical character of the catkins, pistillate flowers, foliage, and the nut of the Mahan Pecan, and they appear to be almost identical with the Schley except being more vigorous. A descriptive term might be 'Schley, plus.'"

ORDER BLANK for MAHAN Pecan Trees

Place.....

Date.....

MONTICELLO NURSERY Co.,
Monticello, Fla.,

Gentlemen:

You may enter my order for.....

Mahan (trade-mark registered) Pecan

Trees, size....., at \$..... each.

Payment enclosed \$....., Balance

Due \$.....

To be shipped about.....

to

via express collect unless otherwise stated. Trees to be shipped C. O. D. for unpaid balance.

Realizing the advantages of having all propagating of the Mahan variety done by one nursery so as to keep the strain clear and true to type, and realizing the great expense of the widespread testing and investigation of the Mahan variety and the great cost of its introduction, it is a protection to the general public as well as the Monticello Nursery Company from the imposition of substitution and misbranding often practiced by unscrupulous dealers. This is intended to prevent fakes from misbranding and marketing inferior varieties of pecans and pecan trees as genuine Mahans. Furthermore, this will enable nut growers who purchase genuine Mahan pecan trees to reap the rewards of the high prices on the nut markets for the Mahan nuts without having the damaging influence of bogus and inferior sorts which may be substituted as genuine. Thus the reputation of the Mahan for being the finest quality pecan in the world, with thin shell, large size, early bearer, luxuriant grower, and most profitable to raise will be maintained and protected by the cooperation of the Monticello Nursery Company and the purchasers of all Mahan trees, for the general good of all purchasers. Therefore, in addition to the money consideration, I also agree not to allow anyone directly or indirectly to use the Mahan trees purchased from you or any wood or buds from the trees for propagating purposes not will I myself use the Mahan trees or buds or wood from the trees for propagating purposes, before 1927. In the event that any part of this covenant is breached or violated, you or your assigns are to have the right to apply for and obtain injunction or other legal remedy from court of proper jurisdiction.

MAHAN Pecan Trees for PROFIT!

MAHAN Pecan Tree
at Monticello, Florida

19 months after planting, bearing over a pound of nuts. (All leaves were picked off tree before taking picture, so nuts would show.)

No other variety of Pecan was ever known to bear so many pecans at such a young age.

History of the Famous **MAHAN PECAN**

EIGHTEEN years ago, J. M. Chestnutt, of Kosciusko, Mississippi, while attending the Mississippi State Fair at Jackson, was attracted by a small number of unusually fine pecans in possession of a stranger; Mr. Chestnutt persuaded the owner to sell five of the pecans for \$1.00. Upon returning to his home at Kosciusko, Mr. Chestnutt planted the five pecans, and one of the young trees which sprang from the original planting showed exceptional vigor, outstripping all others in growth. When this young tree commenced to produce nuts they were observed to be much larger and of finer quality than the original nuts planted. The young tree continued to bear increasingly fine crops; when only fourteen years old it produced eighty pounds. The unusually large size of the nuts and their superior quality of meats attracted the personal attention of Mr. Henry B. Chase of Chase, Alabama, conceded to be an authority on pecan culture and one of the leading nurseryman of the United States. Knowing that we were specialists of long experience and recognized success in pecan propagation, Mr. Chase suggested that we purchase the tree, which we did. It was moved six hundred miles by truck from Kosciusko, Mississippi, to Monticello, Florida. Bud wood from this horticultural sensation was used for propagating trees which produce pecans that are unexcelled for size, thinness of shell, quality of meats and excellence of flavor.

MAHAN *Pecan Top*

At Texas A. & M. College, College Station, Texas. Sixteen months old, 15 feet high, with 24 nuts.

The Texas A. & M. College top-worked two trees $3\frac{1}{2}$ inches in diameter, in April, 1928, and both commenced bearing the second season.
