HOW TO ORDER BY MAIL

YOUR NAME AND ADDRESS—Be sure that your name and address are plainly written in full.

CASH WITH ORDERS—The proper way is to send remittance in full with your orders, otherwise sent by C. O. D. Shipping C. O. D. adds an unnecessary expense. Plants we never sent out C. O. D.

REMITTANCES—All remittance to be made by post-office money order, express money order, or bank draft on San Francisco. For amount up to One Dollar, clean and unused postage stamps may be sent for the value. Coins should not be sent by mail. Checks on local bank may be sent, of which will be a great convenience to all costumers at distance. We are not responsible for any orders which have not duly reached into our hand.

FREE DELIVERY OFFER—We prepay and stand for postages on all shipments to anywhere in this country. Prices are given in this Catalogue cover for all, except where otherwise stated.

FOR FOREIGN ORDERS—Add postage at the rate of 14 cents per pound (35 cents for Cuba). All orders for foreign countries are packed carefully and are sent by insured or registered mail when possible, however, is made at customer's risk.

Our Oriental Seeds are produced in our own gardens in Japan and China under a great care and personal control, and they are imported directly from these countries into our hand. We guarantee the quality to be pure and strong in vitality with high germination.

GUARANTEE OF SATISFACTION—We positively guarantee all seeds and plants sold by us to be exactly as described in this catalog, and free from disease and insect pests. We also guarantee them true-to-name, and will replace, free of charge, any that may prove otherwise through a possible error.

While we guarantee all seeds and plants to reach you in good growing condition, we do not guarantee crop, and cannot be held responsible if later the plants fail. The life of a plant after it reaches the planter in good condition depends entirely upon conditions over which we have no control. A tree, shrub or other plant is a living organism, as much as a cow, horse or man. It breathes, drinks and feeds, and is subject to attacks of disease and insects. Even with our superior quality seeds and plants, success depends largely upon cultivation, soil and weather conditions, so it is therefore agreed that in no case shall the Oriental Seed Co., be liable for more than the original purchase price.

CHINESE CABBAGE 支那白菜

“Paoting” genuine Wong-Bok

(REGISTERED BRAND)

東洋種物會社白菜種子畑の一部(支那保定府在)

Acres of Chinese Cabbage on Our Paoting-fu Farm in Chili, China

and mild flavor make it peculiarly appetizing. It may also enter into a combination salad, by stripping the leaves from the central stalks and cutting up the stalks as with celery, for which it makes an excellent substitute. The stalks, when stripped, appear like celery and will be eaten with an equal zest. When cooked in any of the ways in which ordinary cabbage is used, it not only equals, but, in some respects, surpasses the latter.

The culture is the same as for spinach or lettuce. The seed should be sown any time after May, and for main crop from July to September, $\frac{1}{2}$ inch deep in the row and rows about 24 inches apart. When the plant has grown up 5 to 6 inches thin out to 10 inches apart. Cultivate well and when large enough they should be blanched by earthing up and tying closely with burlap. Any good soil is sufficient, but they seem to head up best in rich black adobe soil. One ounce of seed is enough for 500 feet of drill.

“PAOTING” (genuine “WONG-BOK”) Registered brand (銹球白菜) - Big compact tender and crisp. An excellent “Wong-Bok.” We have found this to be absolutely the best firm-heading “Chinese Cabbage” to grow during the summer months. It will not scald or burn and will make a head when other varieties fail. It somewhat resembles “Kinshu” in shape and “Shantung” in character of leaf, color and size, but the head is more tightly compacted. It will produce a head of 15 pounds and will stand long before bolting to seed. It is excellent in quality; crisp, tender and brittle, with a fine celery flavor. We recommend it either for the market gardener, trucker or private planter, as it is a perfect “Chinese Cabbage” in every respect, not only being in the largest size, but of handsome color and of the finest quality. It is probably the safest variety for an amateur to plant, as it does well at all seasons and one is almost sure of getting a crop. It is vigorous and free from insects. (Pkt. 10c.) (Oz. 50c.) (4 Ozs. \$ 1.50) (lb. \$ 5.00) (2 lbs. \$ 8.00) postpaid. This seed grown in our Paotingfu Farm, in Chili, China.

Chinese Cabbage 支那白菜

(Chinese Celery Cabbage)

This exceptionally fine vegetable is of the cabbage family from china and possesses some distinguishing characteristics which place it, as a cabbage, in a class entirely by itself. In shape it is unlike any other familiar type of the cabbage family. Its habits of growth resemble Cos-lettuce, while the outer leaves, except in their elongated shape, resemble ordinary cabbage leaves in general texture. When the outside leaves are stripped away we see an appetizing picture of lettuce and celery combined, presenting a cool, crisp, inviting appearance well-nigh irresistible.

Shredded and served raw, it outclasses the finest cabbage slaw, or with dressing the best raw cabbage salad; its tenderness

and mild flavor make it peculiarly appetizing. It may also enter into a combination salad, by stripping the leaves from the central stalks and cutting up the stalks as with celery, for which it makes an excellent substitute. The stalks, when stripped, appear like celery and will be eaten with an equal zest. When cooked in any of the ways in which ordinary cabbage is used, it not only equals, but, in some respects, surpasses the latter.

The interior blanches creamy-white, crisp and delicious, and of that desirable rich celery flavor. It produces successfully throughout the year and is considered one of the best late fall and winter Pe-Tsai. It is a good keeper and shipper and its attractive appearance and fine quality make it one of the best sellers. We can say without exaggeration that this is the finest Pe-Tsai in existence to day. Whether for medium early, main crop, or late use, it has no equal, and is so finely bred and so true to type that in a field of several acres every head appears alike. (Pkt. 10c.) (Oz. 50c.) PALMETTO—A very early maturing and prolific variety, producing an abundance of very large deep green shoots of the best quality. (Pkt., 10c.) (Oz., 20c.) (40 zs. 45c.) (lb., \$1.25.)
Roots (40c. per doz.) \$2.75 per 100) postpaid, (\$2.00 per 100 by express).

MARY WASHINGTON (メリーワシントン)—This is the latest introduction of the rust resistant varieties and the best with the advantage over all other varieties of being earlier, which means so much to the grower. Seed is very scarce. Per (Pkt. 10c.) (Oz. 35c.) (4Ozs. \$1.00) (lb. \$3.50) postpaid.

ARGENTEUIL—An excellent variety for the canner and early shipper. This variety is now more extensively grown by large planters and shippers because it is more prolific and stands shipping better. Also its purple tinge is attractive, and its excellent flavor puts it on an equal with the Palmetto for table use. (Pkt. 10c.), (Oz. 20c.), (4 ozs. 45c.), (lb. \$1.25) postpaid.

ARTI CHOKE SEED—Large Green Globe. (Pkt., 15c.) (Oz., 90c). It is advisable to set out plants in preference to seed as the seed usually produces a very large percentage of spiny fruit.

JERUSALEM OR TUBEROUS-ROOTED ARTICHOKE (Per lb., 20c.) (10 lbs., \$ 1 50).

BEANS (ビ ンズ)

Beans should not be sown until April 15th, or until all danger from frost is over, and for a continuous supply should be planted every four weeks until August. A warm, well drained, sandy loam is best suited. Sow the bush varieties in rows 2 feet apart and 3 inches apart in the row. Plant the pole beans 4 feet apart in hills and set a pole firmly in each hill. Sow 5 or 6 beans in a hill. Cover the seeds from 1 to 2 inches deep. One pound of the bush varieties will sow 100 feet of row and 35 pounds will plant an acre. One pound of the pole varieties will plant 100 hills and 25 pounds will plant an acre.

Dwarf Green & Wax Podded (青黄莢つるなし)

KENTUCKY WONDER—King of Pole Beans. The best and most popular pole bean in cultivation. It grows luxuriantly and is enormously productive; the pods hanging in great clusters from top to bottom of pole. Color, silvery green; entirely stringless; very delicious. (Pkt., 10c.) (lb., 35c.) (10 lbs., \$3.00).

KENTUCKY WONDER WAX—An exceedingly productive variety, bearing a large quantity of rich golden yellow pods which are thick, stringless and very tender. (Pkt., 10c.) (lb., 35c.) (10 lbs., \$3.00).

Scarlet Runner (紅花いんげん)

One of the pride of Chinese flowering beans that has been planted chiefly for ornamental purposes. But few people know that the Scarlet Runner may be planted May 1st and in six weeks attain a height of eight feet, and rapidly cover an arbor with vines twenty feet long. In northern location where summers are cool and short this takes the place of the Large Lima Bean. When fully ripened the dry beans are of bright scarlet, heavily blotched with purple. (Pkt., 10c.) (lb., 45c.).

FUJIMAME BEAN (Dolichos Lablab (ふじ豆)) (Imported Seed)—Sometimes called as "Daylight" or "Hyacinth Bean" on account of their handsome flowers. One of excellent snap bean varieties. The pods are large and meaty and very tender when young and entirely stringless. The annual climber of rapid growth and the valuable ornamental vine plant being large cluster of beautiful flowers from early spring to Fall. (Pkt., 10c.) (1 lb., 50c.) (lb., \$1.50).

Sword Beans (なた豆) (Imported Seed)

The annual climber of rapid growth. The full-size of the pods measures up to ten inches in length and two inches in width. The pods are cut to pieces and boiled or put into soup and other ways as usual beans, while it is still far from being ripe. They have excellent flavor. (Pkt., 10c.) (1 lb., 50c.) (lb., \$1.50).

Lima Beans (ライマビーンズ)

FORDHOOK BUSH LIMA—This variety is decidedly our preference among the bush lima beans. It is nearly as early as any. The pods are about four inches long, of medium size, well filled, the beans very thick, tender and of fine quality. The plants are very robust, never coming into contact with the ground. It yields continuously all summer, in this respect superior to any other sort. (Pkt., 10c.) (lb., 40c.) (10 lbs., \$3.50).

Col repollo **CABBAGE** (キャベチ) 甘 藍 カンラン

It is difficult to give definite cultural directions for cabbage, since it is possible to have good cabbage at all seasons of the year in some part of the country. Seed may be planted almost any time of the year. However, there are the seasons preferable for sowing—in September for early spring cabbages, from January to April for summer and fall cabbages, and July to August for winter cabbages. Sow the seed $\frac{1}{2}$ inch deep and transplant the early varieties to rows 24 inches apart and 18 inches apart in the rows. They will mature in about 105 days. The late varieties mature in about 150 days and should be planted in rows 30 inches apart and 24 inches apart in the row. To prevent the heads from splitting open before they are ready to be harvested, the plants should be loosened a little at the root. Cabbages require plenty of moisture, but too much water causes them to rot very readily.

Early Varieties (早生) わせ

COPENHAGEN MARKET (コーペンハーゲン、マーケット)—A new and early variety producing fine heads weighing 10 to 12 pounds, which are very solid and of excellent quality. It is the largest of the early round varieties. Pkt., 10c; oz., 50c; $\frac{1}{4}$ lb., \$1.65; lb., \$5.00. Postpaid.

(子持キャベジ)

BRUSSELS SPROUTS (子持キャベジ) *Berza de Bruselas*

Brussels Sprouts are more hardy than cabbage, and in mild climates may remain in the open ground all winter, the heads being removed as desired. For winter use in cold localities, take up plants that are well laden with heads and set them close together in a pit, cold frame or cellar, with a little soil around the roots.

One ounce will produce 1,000 plants and will mature in about 150 days. Sow as directed for cabbage, and set the plants in rows 2½ feet apart and 2 feet apart in the rows. TOKYO DARK GREEN CLIMBING CUCUMBER

Black Spine. The vines attain twice the length of common varieties. Young plants are bushy, but as soon as they are well established begin to throw out runners and climb, so may be grown on fences, poles or trellises, thus saving much valuable space in small gardens. Fruits 9 inches in length by 2½ inches across when mature, of fine green color; flesh is thick and firm, never bitter, a superb variety for slicing. When young, makes fine pickles. Very prolific; fruits are raised well above the ground so seldom suffer from wet weather or insects. Vines are almost mildew-proof and continue in bearing until late in the season. This excellent climbing variety is noted for standing hot dry summers without serious harm and so is well adapted to Southern climate. It also does well north. If kept picked, the vines will bear freely all season and retains deep green color of the skin for a long time after picked. (Pkt. 10c.) (Oz. 35c.) (4 Ozs. \$1.00) (lb. \$3.50) postpaid. “ORIENTAL'S CHINA-LONG”

A most remarkable and handsome new long green out door cucumber from China. The most fleshy and finest flavor of the long green type. The vines make a tremendous growth. They are unusually vigorous, bearing an enormous crop. The foliage is rich dark green and is quite resistant to diseases and insect attack.

ORIENTAL'S CHINA-LONG makes perfectly straight fruit. They average about 20 inches. They are thickest in the middle of fruit, where they average 2 to 3 inches in diameter. The attractive fruit taper gently toward the ends, holding their thickness well until they run off into a round stem and blossom end.

The skin of the fruit is a beautiful rich dark green set with a number of the characteristic long green. We have many enthusiastic letters from customers who have proclaimed it the most beautiful and best of all long green cucumbers. A most remarkable feature of **ORIENTAL'S CHINA-LONG** is the fact that it retains the beautiful deep green color of the skin until it is fully ripe.

ORIENTAL'S CHINA-LONG is practically all flesh, containing but very few seeds. The thick flesh is a beautiful white. It is crisp, juicy, and of the most delicious flavor, and essentially a qualified cucumber which is absolutely unequalled for market or home use.

The fine large long fruits are extra fine for slicing, but if picked when of small size, they make tasty little pickles. The people in China store surplus products for their winter table after cutting into four or five pieces and drying. The vigorous vines bear continuously, particularly if the fruit is picked as soon as it has reached a good size.

We recommend this novelty cucumber as much the best of all, and the variety anyone should plant. This seed grown in our Paotingfu Farm in Chili, China. (Pkt. 10c.) (Oz. 50c.) (4 Ozs. \$1.75) (lb. \$5.00) postpaid. Imported Seed.

CHAYOTO チャヨテ (隼人瓜) 一個送費共五十仙

CULTURAL DIRECTIONS—One fruit envelopes one seed, which sprouts from the large end. Plant where you intend it shall grow. Cover only the large end, leaving the small end exposed. (See Picture.) Or let the fruit lie around until it has well sprouted, and then plant the seed, leaving the sprout well above ground. Water freely and do not be alarmed if frost should destroy it. A new shoot will soon appear. Give it abundance of water throughout the hot summer season.

The vine is a rampant grower. The first year from seed it will grow twenty to thirty feet. Destroyed to the ground by frost, it soon sends out new growth, and during the second season will extend vines forty or fifty feet in every direction. During September it starts blooming, having a small, white, insignificant flower. Within four weeks the fruit is large enough for the table. One vine in two years if properly trellised will produce more than one thousand fruit. 50c, each postpaid.

MUSHROOM SPAWN (茸の種子)

CULTURAL DIRECTIONS

Ten pounds will spawn about 10 feet square. Mushrooms can be grown in any dark room or cellar where the temperature can be kept at from 50 to 70 degree. From some old pasture procure good, rich soil, and to every bushel of this soil add 2 bushels of fresh horse manure. Of this well-mixed compound prepares a bed, say, 4 feet wide. Put down a thin layer and pound it down hard, and go on until you have a bed 12 or 18 inches thick. As soon as the temperature of the

bed falls from 75 to 50 degrees, the spawn may be inserted in pieces about the size of a walnut, about 2 inches deep and 6 inches apart. Cover with loamy soil about 2 inches deep and beat it down evenly and firmly. Finish off with a covering of clean hay, about a foot thick, and the work is done. If the temperature is right, in 6 or 8 weeks you may expect mushrooms. The beds will continue bearing from 20 to 30 days. After the first crop is gathered spread over the bed an inch of flesh soil, moisten with warm water, and cover with hay as before. The main conditions in mushroom growing are proper and uniform temperature and very rich soil.

WATERMELONS *Zandia* (西瓜) ウオタメロン

A light, sandy soil, with good exposure to the sun, is the best for watermelons. It should be prepared deep, but receive shallow cultivation. Hoe often and thoroughly. To get good, strong vines early in the season, form large, well-drained hills of earth, made very rich, about 8 feet apart. In these plant the seed as soon as the ground is warm and dry, dropping 6 to 10 seeds in the hill. Protect the young plant from insects. One oz. to 30 hills, 3 lbs. to the acre. When the plants are about 4 inches high thin out, leaving only four of the strongest plants to each hill.

Klondike Watermelon
(クロンダイク ウオタメロン)

KLONDYKE—A great favorite of recent introduction. Oblong, dark rich green, flesh bright red, very crisp and sweet. We first offered the Klondike watermelon in 1914. It gained in popularity each year, first in one market then another. On account of the thin rind and extreme crispness the shipper was slow to accept it. But its extreme popularity impelled the shipper to grow it. Each year a larger acreage was planted, bringing greater profit to the grower. Although having a very thin rind it is a better shipper because it does not wilt. We now feel that the Klondike has fairly won the title. "The Prince of all Watermelons." The seed is small. One pound of Klondike will number as many seeds as two pounds of other varieties. The color of the seed is brown, mottled black. (Pkt., 10c.) (oz., 25c.) (¼ lb., 85c.) (lb., \$2.50) (2 lbs., \$4.00)

KOLB'S GEM—A very large round or slightly oval melon. Rind exceedingly hard and firm, making it one of the best round sorts for shipping. Flesh bright red, sweet and tender; black seeded. (Pkt., 10c.) (oz., 20c.) (¼ lb., 45c.) (lb., \$1.25) (2 lbs., \$2.00) postpaid.

大冬瓜

The meat is dark crimson red, deliciously crisp and sweet and fine flavor. It is especially prolific and attractive. We highly recommend this variety to all market growers on account of its many excellent qualities. (Pkt. 10c.) (oz., 20c.) (4 ozs., 50c.) (lb., \$1.50) (2 lbs., \$2.40) postpaid.

ONIONS (アニオン) *Cebolla* 玉葱

Onions are extremely hardy and will grow in any soil. No special knowledge or care is required, providing the soil is kept loose, and naturally onions, like anything else, will do better in good rich soil well drained. For extra early onions the seed should be sown in beds from August 1st to October 1st. Transplant when they are as large as lead pencils 5 inches apart, in rows 15 inches apart during December and January, as the plants will be large enough by that time.

PARSLEY *Perijil* (パセリー)

PLAIN or SMOO-LEAVED—This variety has a richer parsley flavor than the curled varieties and should be preferred for the home garden. It is not profitable to the market gardener for the reason that the curled variety will produce much more per acre. (Pkt. 10c.) (oz. 20c.) (¼ lb. 45c.) (lb. \$1.25) postpaid.

CHAMPION MOSS CURLED—Extra dark. Leaves are crimped and curled, giving a most beautiful decorative appearance. (Pkt. 10c.) (oz. 20c.) (¼ lb. 45c.) (lb. \$1.25) postpaid.

Midribs are boiled and minced and seasoned with butter, served as asparagus, very tender and excellent flavor. The seed should be sown thinly in drills early in spring, in the shady place. It is quite hardy, but should be protected by a thin mulch or hay or straw. Will produce more tender, sweet, blanched, white midribs by earthing up. (Pkt. 10c.) (oz. 20c.) (¼ lb. 60c.) (lb. \$1.75) postpaid. Imported Seed.

Parsley (パセリ)

PEPPERS *Pimiento* (ペツパー)

CULTURE—Peppers are tender and require to be raised in the hot bed. Seed should be sown from December to February, and when large enough transplanted into the ground in rows from one and one-half to two feet apart, and a foot and a half in rows. Sow in open ground during July and August for Fall crop. There are more Peppers raised here than in any other section of the country; the hot varieties are used for seasoning and making pepper sauce, the mild varieties are highly esteemed for salad. Care should be taken not to grow two different kinds close together as they mix very readily. Matures in 95 to 130 days. Four ounces will produce 1,500 plants; 4 ounces to the acre.

SUNNYBROOK, or IMPROVED SWEET CHEESE—The outstanding feature of this Pepper is its unusually fine flavor. In appearance, quality and flavor it is almost identical to the much advertised Topepo, which is erroneously reported to be a cross between Stone Tomato and Ruby King Pepper. It is a much more satisfactory variety than the Topepo ripening much earlier and averaging much larger in size. It is in great demand in all localities where it has been introduced. (Pkt., 10c.) (3 pkts., 25c.) (oz., 60c.) (¼ lb., \$1.80) (lb., \$6.00) postpaid.

Keep the earth about the plants loose and free from weeds. One ounce for 25 hills, 3 to 4 pounds per acre.

TOMATO Tomato (トメート)

For early plants sow in hotbeds early in March or April, in drills 5 inches apart and ¼ inch deep; when the plants are about 2 inches high, transplant into another hotbed 4 inches apart each way; plant out in the open ground early in May, or as soon as danger from frost is over, 4 feet apart each way in hills, which should have a shovelful of well-rotted manure mixed with the soil. Water freely at time of transplanting, but after the plants are well established water sparingly and at the roots only, as spraying the vines and overwatering causes the blossoms to drop off; when the first fruit is set, pinch off the ends of the branches to obtain early fruit. Sufficient plants for a small garden can be grown in a shallow box by placing it in a sunny window in a warm room. For late use sow in a sheltered border in May, and set out the plants in July; the green fruit can be picked off before frost and ripened under glass. By training the vines on trellises or trying to stakes, the fruit will ripen better and be of finer quality. The fruit matures in 150 days.

PETUNIAS

Petunias grow with little attention or care and in any soil when once started and bloom profusely all spring and summer. The large, double varieties do not produce seed, but the pollen from them is artificially crossed on the large single, and fringed plants, and the seed so produced will make a percentage of double blossoms. The giant-flowered types produce large, single, plainedged or fringed-edged blossoms, or very thickly double flowers. As Petunia seed is exceedingly fine, start the seed in a box or flower-pot and merely press into the soil after sowing, cover with chopped moss, or sift a little sand over to cover, and, if possible, allow the water to soak up from beneath. The weakest looking plants will develop the handsomest flowers, so save all the plants carefully.

Petunia seed is very fine and very expensive; there is, therefore, but very little seed, almost like dust, in each packet

PEAONIA MOUTAN (牡丹)

(Tree Peony)

These immense beautiful and well known flowers from another source of Japanese pride, and are too well known to require description. Their present popularity is due to the great improvement in them in recent years their easy culture, the handsome appearance of the plant, and the brilliant and striking effect of these massive, finely formed and rich colored flowers. The attention given to them in this country and Europe has resulted in the production of many notably fine new varieties which rank about first for lawns or flower borders or shrubby decoration. Sow Seed outdoors in well pulverized, rich and covering about one inch. Very slow germinate as will take 3, 4 months seedlings come out. With ordinary care, will bloom in third year, (Pkt. 25c.) (5 Pkts. \$1.000); postpaid. Imported Seed.

THE ROSE

December, January, February and March are the best months for planting but should the season be favorable you can still plant during the early part of April. The plants sent out during these months are what we call dormant two-year-old budded plants. Roses give best results when planted in a fairly sunny location and in good heavy sediment soil to which may be added some old manure or bone meal, but never use fresh manure. When planting straighten out all roots and as the dirt is filled in see that it is well packed around them; this keeps out the air and encourages a new growth of rootlets. Be sure that the Rose is planted so that the point where it is budded shall be just below the surface.

The bulbs should be planted about 4 inches deep and 7 or 8 inches apart. Any good garden soil will make strong plants and good bloom, but a light application of any well decayed manure or good commercial fertilizer applied on the top of the ground after the plants are several inches high will aid in producing larger blooms. Keep the ground moist until the flower spikes begin to appear, then water freely. The bulbs should be taken up in the fall, after the leaves have become yellow, and then stored in a cool, dry place, free from frost. From December to April are the months to plant Gladiolous.
