DUBOIS Woven Wood Fence

BEAUTY , PROTECTION , PRIVACY

for Estates, Suburban and City Homes, Gardens
Laundry Yards, Front and Side Lawns, *Etc., Etc.*

From a famous wood-working factory in France comes Dubois Woven Wood Fence.

It is made of split, *live*, chestnut saplings which have first been carefully matched and then woven together against horizontal braces with heavy wire to form a solid screen.

Only the straightest saplings are chosen and the work is done entirely by hand. This makes for a perfection of form that machine-split fencing cannot duplicate. The wire used in binding the saplings is Copperweld, which not only possesses great strength but is absolutely rust-proof.

Dubois is shipped just as it is imported, in 5 ft. sections, and is easily handled. It comes in six heights, 10', 8', 6' 6", 4' 11", 3' 10", and a special new 18" height for bordering flower beds. It is also made up into charming gates, either curved or straight at the top. Special designs, blending the various heights, can be made upon order if desired.

Our Cover

This year we are again fortunate in having on our cover a picture which should be of real interest to garden lovers. It is a scene from "Ironclad," the beautiful estate of Mr. and Mrs. Lyman B. Chipman, at Cape Elizabeth, Maine.

"Ironclad" was the name given to the original old stone house which nestled on the cliffs looking out over the broad Atlantic, when owned by a club of prominent Portland men years ago. In developing his new home Mr. Chipman very happily left the old stone house almost intact.

This estate is not only one of the most beautiful along the Maine coast but the name "Ironclad," as applied to this home, is certainly synonymous with true Maine hospitality, as literally thousands of Mr. and Mrs. Chipman's friends and acquaintances can attest.

"A. S. & L. Special" Ensilage Corn

"A. S. & L. SPECIAL" ENSILAGE CORN. An early hybrid corn making large ears and an immense amount of foliage. This corn is grown especially for us by growers who have made an extensive study of ensilage corn so that we can highly recommend this variety, especially its milk producing qualities. It has been used extensively by our customers in this section the past two seasons and has given wonderful results. Price, \$4.50 per bushel.

EARLY EIGHT-ROWED YELLOW FLINT. This corn is grown right here in Maine and is the earliest yellow variety we know. It matures in ninety days and the ears are long with small cob filled to the tip with large broad kernels.

We cannot recommend this corn too highly for either Grain or Ensilage. Price on application.

GENUINE EUREKA ENSILAGE. The corn that grows more ensilage to the acre than any other variety. It grows very tall, attaining a height of 12 to 15 feet and makes a heavy thick growth of fodder. Try this variety if you want the maximum tonnage. Price \$3.00 per bushel.

IMPERIAL LEAMING. A yellow Dent variety very valuable for ensilage. The plants are tall with a large amount of foliage. Each stalk usually produces two good long ears with small red cobs, well filled with large, deep golden kernels. Price \$2.50 per bushel.

SWEET FODDER CORN. For soiling or ensilage. Some dairymen prefer the sweet fodder corn to the ordinary ensilage variety, and although it does not make as large a stalk, nor as much foliage, it is highly relished by stock. It does best when sown in drills at the rate of 2 bushels to the acre. Price on application.

STANLEY'S CROW REPELLENT.

Saves replanting, prevents crows, other birds and animal pests from pulling corn. Protects corn from rot caused by moisture. Makes seed germinate faster. Does not clog planter. Large can, enough for two bushels of seed corn, \$1.50. Small can, enough for one bushel, \$1.00.

Mixing Nitragin with Seed

Legume Germs die rapidly when dried. NITRAGIN, containing between 30%—40% moisture, will readily stick to the seed without adding water, and give inoculation. However, for best results, the preferred practice, recommended by The Nitragin Company and Agricultural Authorities is to use water when mixing legume culture with seed.

SEMESAN Seed Disinfectants

The **NEW IMPROVED SEMESAN BEL** gives better disease control at less cost. Better control of seed-borne potato diseases. More consistent increases in yield. Larger growing profits. That is what the **New Improved Semesan Bel** potato dip offers you—and at a cost of only 1½ to 3 cents a bushel. For less, even, than the cost of the old "two-hour" soak methods, you can now disinfect your seed potatoes by this effective time and labor-saving dip method.

A single pound of **Improved Semesan Bel** will treat from 70 to 80 bushels of seed potatoes—or from three to four times as many bushels as the original product. Potatoes can be treated as fast as you can fill and empty the baskets. No 1½- to 2-hour soaking is necessary. One man alone can treat from 300 to 400 bushels per day.
Price, 1 lb. \$1.75, 5 lb. \$8.00.

SEMESAN can be used for disinfecting all types of seeds and seed pieces, such as bulbs, corms, roots or tubers, as well as for cuttings and sprouts. It will prevent and control the more common externally seed-borne diseases of cereal, fiber, field, flower, forage, nursery and vegetable crops, as well as some of those infections which exist within the seed or infest the soils. Semesan also prevents and controls the development of parasitic organisms causing "dampening-off" and it will also eliminate and cure the "brown patch" of fine golf course or lawn grasses.

Price, 2 oz. 50c., 8 oz. \$1.60, 1 lb. \$2.75, 5 lbs. \$13.00.

SEMESAN JR. is exclusively a dust disinfectant for preventing and controlling the ear, root and stalk rots of field and sweet corn, for large acreages of which, it will be found more economical than Semesan.

Price, 4 oz. 50c., 1 lb. \$1.75, 5 lbs. \$8.00.

NASTURTIIUM

A popular flower which is in constant bloom throughout the season, making a better display than almost any other plant. New colors are being developed, and in our list will be found all the best varieties that have been introduced.

Nasturtiums are of the easiest culture and require very little care after the seed is sown, merely weeding and the seed-balls picked off. If these are permitted to mature the beauty of the plant is soon lost. Plant the seed one inch deep in moderately good soil. The tall sorts are specially adapted for covering unsightly fences or trailing over rocks and rough ground. Hardy annual.

Dwarf Varieties

Of dwarf, compact growth; bloom in two months from sowing and most profusely the whole season. Height 1 foot.

Pansies thrive best in a moist, shady location and in rich, loamy soil. Seed should be sown in the autumn for early spring blossoms. If sown in the spring, get it in as early as possible, so as to secure flowers during the early rains. Seed sown in a cool place in May or June, and well watered until up, will produce tall-flowering plants. Sow as early as the ground can be prepared in a deep, rich, moist soil, in drills 6 inches deep, covering about 2 inches deep. As the vines grow, fill up the trenches with soil and thin out to about 4 or 5 inches apart. A popular plan at the present time is to sow in double rows with a trellis or a row of brush between.

One-quarter of a pound of seed will sow fifty feet.
