GLADS

1931

Louie Forman

Bloomington :: Illinois

Suggesting Some Arrangements

The successful arrangement of Glads, as of all other flowers, begins in the garden. If it is a hot day, and you are cutting many, take a bucket half full of water with you and put the spikes in it as you cut them. The stems will fill with water quickly and the flowers will not be bruised. For choicest blooms, cut light colors when the first floret shows color, and the dark ones when two florets are open. Use a sharp knife and cut the stems on a slant, leaving four or five leaves to mature the bulbs.

The ideal vase for Glads gives a feeling of stability and repeats to some extent the classic grace of their stems. It should only be high enough to give the necessary support, for we have discovered the charm of spreading, irregular bouquets that reveal the beauty of each individual spike. Pottery is always in order, with cream, green, gray and black the easiest to handle. There are delightful possibilities, however, in other colors when properly used, as when the exquisite cameo pink of Mrs. P. W. Sisson is enhanced by a powder blue bowl. Minuet or Phipps in a cream vase is a sight never to be forgotten; Dr. Bennett or Dr. Nelson Shook in black and Emile Aubrun in silver gray are stuff that dreams are made of.

Pitchers are useful, and the more crooked stems you can find for them, the happier they are. A white Italian pottery pitcher with a dull rose flower and a blue line may hold Rose Ash and blue Salvia; and Gloriana, Merced, and Ming Toy repeat the deep orange decorations of another. Metal containers are especially appropriate for dark reds and smokies. Sword of Mahomet, Romance and John T. Pirie look extremely well in brass. Any extra time spent in trying new effects should not be counted as lost, for you are creating a thing of beauty that will last not for hours, but days. Glads are not fussy about the frequent changing of water, and the lower florets can be removed when faded, and the stems shortened to keep the proportions correct. Even the tips will bloom out if cut off and placed in a low vase or bowl.

If you need support in a large vase or basket, arbor vitae is better than asparagus or cut leaves or stems, both in its body and keeping qualities. Chicken wire with a fine mesh or hardware cloth are used in flat baskets. Any greens should be put in before the Glads are arranged, not after. Huckleberry, tamarisk, privet, hemlock, gypsophila, Euphorbia Corallata and Artemisia are all effective.

The day of the set basket has passed and an irregular one-sided outline has taken its place. When two or more colors are used, arrange them in groups or drifts with the lighter predominating. A cluster of Veilchenblau with Phipps or Golden Measure brings out the color of both. Souvenir with Magic, Sovereign or Blue Lily are often seen, but always effective combinations. For pure delight, at one side of your basket or vase of Phipps, add a small group of Emile Aubrun, with two or three Marmoras above it as a final gesture.

Lovely arrangements can be made in one color by using varieties that differ in size and form. Phipps for height, Richard Diener for second height and substance, with sweet Jenny Lind as a finishing touch is altogether a dream of beauty. Captain Boynton, Mrs. F. C. Peters and J. D. Oliver make a delightful lavender ensemble. And when you want a new game to play, combine your beauties that have blotches or throat lines with self colored varieties that are the color of the blotch or lines, and see what fun you can have. Gloriana and Gold Eagle, Sweet Lavender and Anna Eberius are suggestions.

The familiar square iron holders make the mechanics of low vase and bowl arrangements a pleasure. In all the flower world no lovelier table decorations can be found than the dainty primis alone or with soft greens. Golden Frills, Patricia Carter, Cassopia, Cygnus, White Butterfly and The Orchid are especially good for this use.

Nothing is more beautiful or satisfying than Glads alone, and the stateliest beauties need no adornment. Even a single spike of Minuet, Mrs. Douglas or Betty Nuthall in a vase is a joy. But the delight of combining many varieties with other flowers should not be overlooked. Dr. Bennett is set off by high bush cranberries, Bristol Fairy Gypsophila or the roadside euphorbia; Giant Nymph and Iatris; Crinkles and Queen Anne's Lace; Magic and buddleia; Evelyn Kirtland and hardy blue salvia are lovely. Jenny Lind loves blue Delphinium, Mrs. Sisson a light blue, while Los Angeles smiles with either or the blue lupine. The combinations are endless and each new one seems lovelier than the last. Ease of handling comes with practice and the more you work the more you wonder at the miracles of color and form unfolding before your eyes.

Elizabeth W. Forman.

FOREWORD

After years of growing Gladiolus as a pastime, I am entering the commercial field with an assortment of CHOICE and UNUSUAL Glads that have been selected from the several hundred that I grow because of their beauty, popularity and ability to thrive under any and all conditions. Most of the varieties here listed have won for me the highest honors in regional, state and national exhibitions against the keenest competition of professional growers. In making this selection I have submerged my personal likes and dislikes and am offering the varieties that have proved most dependable and are held in highest esteem by popular acclaim.

Each year, there are added to my collection many new and different varieties, which after being grown for two years must measure up to the high standard of excellence demanded by the Glad-loving public, otherwise the variety is discarded and the stock destroyed.

These Glads are grown in the fertile black soil of central Illinois that requires no commercial fertilizing stimulant to produce the ideal type of bulb; large, high-crowned, smooth and plump. To minimize the possibility of disease, each year the location of the Glad field is moved to ground that has been in blue grass pasture for at least ten years and plowed to give sufficient time for the decay of the sod, thus supplying the humus so necessary in the production of gladiolus. Before planting, all bulbs and bulblets are given a strong chemical fungus destroying bath as a precautionary measure. Except in seasons of prolonged drought, such as was experienced in 1930, irrigation is not required and while the dry and extreme hot weather of last summer had a tendency to hold back and shorten the blooms, yet in October I harvested some of the best bulbs that I have ever grown.

Special care is taken at digging time and during cleaning and storage to keep each variety in a separate labeled container and I

GUARANTEE

my bulbs to be clean, free of disease, true to name and graded to standard size. Any order that is not satisfactory in every respect will be replaced or the money gladly refunded.

A WORD OF EXPLANATION

In listing the varieties, there are given in order:

The name of the variety.

The originator.

The type of the variety, whether it is

G. (Grandiflorus)

P. (Primulinus)

P. G. (Primulinus Grandiflorus)

*The approximate blooming date.

The American Gladiolus Society color classification.

Suggesting Some Arrangements

The successful arrangement of Glads, as of all other flowers, begins in the garden. If it is a hot day, and you are cutting many, take a bucket half full of water with you and put the spikes in it as you cut them. The stems will fill with water quickly and the flowers will not be bruised. For choicest blooms, cut light colors when the first floret shows color, and the dark ones when two florets are open. Use a sharp knife and cut the stems on a slant, leaving four or five leaves to mature the bulbs.

The ideal vase for Glads gives a feeling of stability and repeats to some extent the classic grace of their stems. It should only be high enough to give the necessary support, for we have discovered the charm of spreading, irregular bouquets that reveal the beauty of each individual spike. Pottery is always in order, with cream, green, gray and black the easiest to handle. There are delightful possibilities, however, in other colors when properly used, as when the exquisite cameo pink of Mrs. P. W. Sisson is enhanced by a powder blue bowl. Minuet or Phipps in a cream vase is a sight never to be forgotten; Dr. Bennett or Dr. Nelson Shook in black and Emile Aubrun in silver gray are stuff that dreams are made of.

Pitchers are useful, and the more crooked stems you can find for them, the happier they are. my bulbs to be clean, free of disease, true to name and graded to standard size. Any order that is not satisfactory in every respect will be replaced or the money gladly refunded.

A WORD OF EXPLANATION

In listing the varieties, there are given in order:

The name of the variety.

The originator.

The type of the variety, whether it is

G. (*Grandiflorus*)

P. (*Primulinus*)

P. G. (*Primulinus Grandiflorus*)

*The approximate blooming date.

The American *Gladiolus* Society color classification.

Ridgway's color description.

A short comment (compiled from field notes) of the variety as to color, form, vigor, conformation, habits, adaptability and popularity.

*The blooming dates are approximate as latitude, time of planting, size of bulb, soil and fertilization, general weather conditions and amount of moisture tend to lengthen or shorten the interim between planting and blooming. However, these dates can be relied upon as fairly accurate for large sized bulbs planted between April 20th and May 15th in the central Western states and grown under ordinary conditions.

ORDERS

No substitutions. All orders accepted subject to prior sale.

No order will be accepted amounting to less than \$1.00.

Orders under \$5.00, CASH.

A deposit of 25% of the amount of the order will hold orders of \$5.00 and over until March 15th, at which time the order will be sent C. O. D.

Postage or express charges prepaid on all orders.

Shipments will be made as weather conditions permit. Except on Southern orders, prefer not to ship before March 15th.

PRICES

You will find my prices fair and in line with those of other reputable growers. I have no inferior bulbs to unload at cut prices and for every dollar you send me you will receive one dollar's worth of **quality** with the following

DISCOUNT

Cash with order.

Orders of \$5.00 to \$15.00, a discount of 10% in bulbs of your selection.

Orders of \$15.00 to \$50.00, a discount of 15% in bulbs of your selection.

Orders of \$50.00 to \$100.00, a discount of 20% in bulbs of your selection.

OR

A cash discount of 10% on all cash orders.

5 bulbs at the 10 rate, 25 bulbs at the 100 rate.

MIXED BULBS

A quantity of bulbs of thirty named varieties that have become "scrambled" thru accidents. No primis and no seedlings. An ideal assortment for the flower lover who just wants cut flowers and does not crave the bother of keeping varieties separated.

	Large	Medium	Small
Per 100	\$ 2.00	\$1.50	\$.75
Per 1000	11.00	5.00	3.50

Limited stock of over two hundred varieties not listed. Probably can furnish small quantity of any variety you wish. Let me quote you prices on your wants.

SEE INSIDE BACK COVER PAGE for PERENNIALS and ROCK PLANTS.

To each new member sending me their application for membership in the ILLINOIS GLADIOLUS SOCIETY, I will give blooming size bulbs to the amount of \$1.00.

Dues in the ILLINOIS GLADIOLUS SOCIETY are \$2.00, which includes affiliated membership in the AMERICAN GLADIOLUS SOCIETY, subscription to THE GLADIOLUS REVIEW for one year and a copy of the Illinois Gladiolus Society 1931 YEAR BOOK.

Dues for both residents and non-residents of Illinois who are A. G. S. members, \$1.00.

Make checks for dues payable to Earl A. Holl, Secretary.
