Excerpt from "The Lilies of Eastern Asia"

by ERNEST H. WILSON.

Lilium philippinense var. *formosanum*:

THE finest plants I saw grew among coarse Miscanthus Grass, on a wind-swept knoll, 6,000 ft. above sea level, in Nanto prefecture. They were over 6-feet tall and had relatively broad, uniformly 5-nerved leaves. I gathered seeds and plants raised from them in the garden of Professor C. S. Sargent, Brookline, Mass., blossomed in six months from sowing but were in every respect indistinguishable from others raised from a narrow-leaf form which grew at sea level. At low altitudes in Formosa this Lily appears to flower every month in the year, the bulbs take little or no rest, but keep growing and breaking up into colonies. At higher levels, where the seasons are to be defined, the Lily conforms to them and flowers but once a year. That it should blossom in six months from seed is remarkable and shows that the Lily is markedly precocious.

The seed we offer has been collected by Messrs.

T. Sakata & Co. of Yokohama, Japan.
