In order that you may not be disappointed I urge you to place your order as early as possible. I have a limited supply of these perennial plants available and can only fill orders as long as the stock holds out. I must of necessity return your money in the event your order is received too late.

Orders will be filled in the order in which they are received.

Note: All of the above Hardy Perennial Plants bloom the first year. I will send all six plants to you carefully packed for only \$1 prepaid to you and safe arrival guaranteed. Shipments will be made within three days after your order reaches me.

FACTS ABOUT PERENNIALS

THE GAILLARDIA is among the showiest and most effective hardy perennial plants and should find a place in every hardy border. They thrive in almost any position in any garden soil, require little or no protection and take care of themselves. If sown early they begin flowering in July, continuing in mass bloom until frost; fine for cutting; height 2 to 2½ feet.

COREOPSIS—This is one of the finest hardy plants, with large showy, bright yellow flowers, produced in great abundance from June till frost. As a cut flower it stands near the head of the list having long stems and lasting in good condition a week or more. Flowers the first year growing as high as 30 inches.

FOXGLOVE OR DIGITALIS — Handsome and highly ornamental plants of stately growth, succeeding under almost all conditions, and with but little attention will give a wealth of flowers during June and July. They are now used extensively with good effect for naturalizing in shrubberies, the edge of woods and other half shady places. Growth to 3 and 5 feet. Flower first year.

DELPHINIUM — One of the most marvelous flowers of the garden. Blossoms of rich blue closely clustered to a graceful spike. They require little attention; in fact one is rarely disappointed with the results obtained even when somewhat neglected. This flower is used most artistically with other flowers, chiefly Gladioli.

SHASTA DAISIES—A splendid hardy perennial with flowers rarely less than 5 inches across, of purest glistening white, with broad overlapping petals, and borne on strong stems, a beautiful cut flower, remaining in good condition a week or more.

COLUMBINE are among the most beautiful of hardy plants. They produce long, graceful spurred flowers on stems rising two feet or more above the beautiful divided foliage. They are marvelous flowers and most beautiful when interspersed among other flowers in bouquet. They are easily maintained and require little or no special culture. They should be grown in great quantity.
