RHODODENDRONS

Rhododendrons · Kalmia

AND OTHER PLANTS

RHODODENDRONS and *Kalmia latifolia* are the most useful and satisfactory evergreens for planting, either in groups or around borders of deciduous trees or shrubs, or for the woodlands.

Will thrive both exposed to the sun or where it is shady.

They are perfectly hardy and bloom during the month of June and are of various colors.

They grow best in a peat soil, or ground prepared with leaf mold. They prefer an acid soil, as most evergreens do.

Plenty of water should be used in planting, and during the first summer should be watered at least once a week.

It is best to mulch the ground after planting with dead leaves or dead grass about three or four inches thick. This keeps the moisture in the ground, which these plants require. It is best to leave this mulch on during the Summer and Winter of the first year at least, if not longer.

Pinch off all seed pods after flowering, in order to get good buds for the next season. When planted and cared for under such conditions, the greatest success should prevail.

PRICES ARE F.O.B. POINT OF SHIPMENT

Prices given herein, per 100 and 1000, are for car lots and no packing charges. Prices, per 10, and for quantities less than car lots packing expenses additional at cost.

Terms—New customers, references or cash in advance.
