LAWN AND SHRUB MIXTURE is the best. It is not odorless, which in itself is a guarantee that this mixture contains organics making it a slow feeder which will not force such as a chemical or odorless fertilizer. Too much forcing causes the lawns to burn or turn brown. 6c lb.; 50-lb. bags, \$2.50; 100-lb. bag, \$4.50.

Peas

When grown as a market crop, peas are never staked; for private use they are generally sown in double rows and the tall varieties staked up by bush. For an early crop, sow as soon as the ground can be worked, and make repeated sowings every two weeks for succession. After the first of June sowing should be discontinued until the middle of August when a good crop may sometimes be secured by sowing an extra-early sort for Fall use.

All marked thus (*) are wrinkled varieties. Extra Early Dwarf Peas.

Vine and foliage moderately heavy, medium green; pods medium green, 3½ inches long, broad, thick and "stubby" appearing, square ended pods contain 7 medium green peas of best quality; fairly productive and in season, slightly earlier than Thomas Laxton. Tomatoes

Marglobe—This new main-crop or mid-season tomato is a wilt-resistant variety bred for use in disease infected districts. In addition to being wilt-resistant, it is a handsome deep red globe shaped tomato of great merit. The plants are vigorous and productive and the fruits are quite large. In our trials they averaged $7\frac{1}{2}$ ounces in weight. The flavor seems to be a happy medium between the acid and non-acid sorts. The shape and size of the fruits makes this a very desirable salad or slicing tomato and the color and quality seem ideally fitted for canning. JUNE PINK

Turnips

Three ounces of seed will sow 100 yards of row. Four pounds to the acre. Matures for table in from 60 to 90 days, according to variety and season.

Turnip seed may be sown when the peach is in bloom, or among the first seeds in early Spring; indeed, the only hope of a successful Spring crop is in an early start, as otherwise the period of maturity extends into hot weather, when the bulb becomes fibrous and pungent.

EARLY RED TOP GLOBE TURNIP

Midsummer and early Autumn are the seasons for successful turnip drilling, though frequently the conditions of the soil then are not favorable to satisfactory vegetation.

The seed of Cattle Turnips is always drilled in rows, while the early maturing and surface-rooted table turnip is generally sown broadcast. We advise the sowing, either in drills or broadcast, of not less than three pounds to the acre to insure a satisfactory stand.

The Bloomsdale Swede, like other Ruta-Bagas, is slower in growth than the rough leaved turnips, but produce roots more solid and more nutritious—less laxative and more fattening. The Ruta-Baga is a gross feeder and will do best with 20 to 25 tons of stable manure to the acre; when it cannot be obtained apply 500 pounds of superphosphates.

Early Fiat Red or Purple Tob (Strap-leaved)—60 days. The oldest standard red. 1 oz., 10c; $\frac{1}{4}$ lb., 20c; lb., 60c.

Satterthwaite's

Evergreen Lawn Seed

PREPARING FOR PLANTING

The first thing is to see that there is a good top soil of at least six inches. This should be graded and drained, if necessary. The ground should be thoroughly mellowed by digging. Then it should be raked and rolled. All stones and roots should be removed. Now the seed may be sown. It should be lightly raked in and then rolled. If the seed is sown in April and May it will make a good lawn by August.

The seeds in this mixture are the best tested seeds obtainable. They are full of vitality and will secure a lawn quicker than any other seed. Sow five bushels to an acre. Sow one quart to every two hundred square feet.

*How
to Make
Better Lawns
and Gardens....*

A Sure Way to Make Your Lawn, Plants and Shrubbery Grow!

YOU can make a beautiful lawn and garden or grow a big crop of delicious vegetables if you provide your plants with a rich, mellow soil and a plentiful supply of natural plant food. Your soil must be friable and well supplied with humus to insure quick germination of seeds and a strong, thrifty root growth. Moreover, your plants must have a steady supply of natural, easily digested food to enable them to grow and develop their real beauty. So if you want your lawn and plants to thrive, be sure to make your soil rich and fertile with Wizard Sheep Manure.

WIZARD Sheep Manure is a highly concentrated manure, sterilized by a direct heat process that kills all weed seeds. This natural soil building plant food adds the humus and beneficial bacterial action that puts new life into worn-out soils. Wizard can be safely used by every home owner and gardener without fear of burning plants because it supplies plant food in a safe, natural form. Wizard has been used and recommended by successful florists and landscape gardeners for over twenty-two years. Read the following pages and learn how easily you can grow a velvety lawn, beautiful plants and big, profitable crops with Wizard Sheep Manure.

Why Wizard Insures Better Lawns, Flowers and Vegetables

Lawns and Gardens

NOTHING makes a home more attractive than a beautiful lawn and garden. Your success in making beautiful lawns depends upon the condition of your soil. If the soil is hard and dry the tiny grass seeds will not germinate. The tender roots cannot penetrate nor find food in worn-out soils. The first and most important step is the preparation of a mellow, finely pulverized seed bed—one rich in plant food and humus. For this purpose Wizard Sheep Manure is unexcelled. It produces a thick, velvety green lawn of lasting beauty. It provides the soil with the natural plant food that feeds the millions of grass plants that make a smooth, thick turf. Start right by using Wizard Sheep Manure and your success is certain.

Wizard is absolutely weedless, easily applied and just what nature needs to make plants grow.

In making new lawns, pulverize the surface soil well and broadcast at the rate of 6 to 10 lbs. per 100 sq. ft., raking well into the surface soil. Sow seed and roll.

For renovating old lawns, use 6 lbs. per 100 sq. ft. and rake into the surface soil previous to sowing seed. One or two additional light applications during early summer or fall will greatly improve both color and growth of starved lawns. Apply Wizard on a still day and if possible wet down with a hose.

Flower Gardens — House Plants

IN THE flower garden Wizard stimulates increased growth of healthy green foliage and a wealth of vivid colored flowers. It puts new life into shrubbery and trees. House plants and window boxes need frequent applications of this natural plant food. For garden planting use one pound to seven sq. ft. and cultivate into the surface soil. Do not place the pure manure in direct contact with the roots—mix it well with the soil. To make liquid manure for house plants, mix one pound of Sheep Manure in five gallons of water.

For Greenhouses and Hot Beds

THE florist can rely on Wizard for quick and sure results. Unexcelled for feeding carnations, 'mums, asters, roses, etc. Absolutely weedless and safe for all crops grown under glass. Mix with the soil when beds are filled or use as a dry or liquid manure for feeding during the growing season. Makes a fine uniform seed bed for hot-beds. No weeds to disturb the tender seedlings. Especially recommended for tobacco beds.

How Wizard Improves All Soils

THERE is no substitute for manure in making soils rich, mellow and fertile. Wizard supplies the humus and natural plant food that is lasting in its beneficial action. It loosens heavy clay soils and stimulates increased root growth. It binds loose, sandy soils and increases their water holding capacity. It gives worn-out soils all the natural elements necessary to promote healthy plant growth. Insure permanent soil improvement by using this safe soil builder.

Vegetables and Fruit

FOR growing crisp, tender vegetables, Wizard Sheep Manure is indispensable. Its forcing action causes quick growth, insuring big crops early in the season when prices are highest. Wizard provides the humus to loosen heavy soils and improves drainage so that the soil warms earlier in spring. It builds up the soil and makes possible the production of two or three crops from the same soil each year.

Its superiority over ordinary manure is very plain when you realize that Wizard is weedless and that One Bag Equals a Whole Wagon Load of Stable Manure. The amateur grower will find it safe and dependable, a source of increased delight in his hobby because of the wonderful results it brings.

Wizard is recommended by expert market gardeners for all vegetables, especially for radishes, lettuce, onions, celery, cabbage, early potatoes, etc. For growing luscious fruits, berries and melons it is unsurpassed.

Applications can be made broadcast after plowing and harrowed into the soil at the rate of 1,000 to 1,500 lbs. per acre. If used in the drill at planting time, use 700 to 1,000 lbs. per acre. Side application later in the season will be found very profitable.

When Wizard is applied in the hill, mix a double handful with the soil before setting plants in place.

Don't Plant Without Wizard — It Builds Up the Soil

THE best of all manures for Home Lawns and Gardens, House Plants, Window Boxes, Golf and Country Club Greens and Fairways, Shrubbery, Trees, Vines, Fruits, Berries, Melons, all Vegetable Crops under glass or in the field. Effectively sterilized, weed seed killed. Supplies the humus, bacterial action and plant food that make everything grow.

CAUTION: *Insist on Wizard Brand Tag on every bag. It protects you against inferior so-called sheep manure being sold on Wizard Brand reputation.*
