MARKET ST.
Philadelphia, Pa., U.S.A.**

SPECIAL NOTICE

We make a specialty of supplying Market Gardeners with the best strains of seeds that can be produced. We are always on the alert for a better strain, and if we find it, we spare no expense in securing stock of it. We handle absolutely nothing that we do not believe to be the best obtainable. We do not claim to compete in prices with irresponsible parties, whose sole effort is to secure the lowest priced seeds, regardless of quality; such seeds are not cheap, but dear at any price. The first cost of seeds is insignificant, compared with time and labor that must be expended upon a growing crop. Quality is our first consideration, and the prices we offer are as low as first-class seeds can be sold for.

It is our endeavor to maintain the prices quoted in this catalogue throughout the season, and while we do not think there will be any serious change, they are subject to change without notice. We recommend that you order as early as possible.

How to Order and Remit—Read Carefully

Use the order sheet enclosed in Catalogue if possible. Write your name, post-office, nearest express or freight office (if different from post-office), County and State. Write plainly to avoid mistakes.

Remittances should be made by POSTAL MONEY ORDER, EXPRESS MONEY ORDER, CERTIFIED CHECK, or by REGISTERED LETTER.

Prepaid Orders.—We Prepay Transportation (Parcels Post, Express), our option, on all flower and vegetable seeds in packets, ounces, quarter pounds, half pounds and pounds, at prices quoted herein, to any point in the UNITED STATES, CANADA, SOUTH AMERICA, WEST INDIES, including CUBA, when CASH accompanies order.

Bulk Orders.—We Prepay Freight or Express Charges, our option, to your nearest railroad station to any point in the UNITED STATES or CANADA on orders amounting to TEN DOLLARS or more if CASH accompanies order on vegetable and flower seeds, providing not more than 50% of the value is PEAS, BEANS or CORN.

Purchaser Pays Transportation on POTATOES, ONION SETS, IMPLEMENTS, INSECTICIDES and FERTILIZERS, also on PEAS, BEANS and CORN, when ordered alone in five-pound lots or more.

The Parcels Post rate to CANADA, SOUTH AMERICA and the WEST INDIES, including CUBA, is 14 cents per pound.

C. O. D. Orders.—If goods are to be sent by EXPRESS C. O. D. or SIGHT DRAFT BILL OF LADING ATTACHED, 25 per cent of the amount must accompany the order. All C. O. D. CHARGES must be assumed by customer.

If wanted by C. O. D. Parcels Post, charges will be ADDED thereto.

Parties buying large quantities of any one variety will be quoted special prices on application.

Express and freight rates are cheaper in large quantities. We make no charge for delivery to freight depot or express office.

We Do Not Warrant Seeds

The fact that no reputable seedsman now warrants seeds in any respect being well known, renders it unnecessary for us to say very much on this point, as it must be apparent to every intelligent person that no seedsman can afford to send out poor or worthless seeds. There could be no more certain way of destroying his business. We beg to append the following notice:

We give no warranty, express or implied, as to description, purity, productiveness or any other matter of any seeds, bulbs or plants we send out, and we will not be in any way responsible for the crop.

TESTIMONIALS

We could print hundreds more if we had the space.

"Last year I planted 2 lbs. of your Delicious Cantaloupe Seed. I have raised Cantaloupes for market for sixteen years at this location and last year's crop was the only one I ever raised when there was not a loss of from 20% to 50% by splitting open on hot days after a shower.

"The Delicious did **not** split. As your catalog does not give this trait and it is of great importance to Southern Growers, I am under the impression you do not know it."

(Signed) B. H. BICKNELL, Jr.,
Citronelle, Alabama.

"The Seeds we received from you last year proved more than satisfactory, and have more confidence in you than all other seedsmen from whom we have bought before."

(Signed) JULIUS PETER,
West Allis, Wisconsin.

"Your seeds are the best I ever had. I believe every seed of everything I ordered came up."

(Signed) E. O. HENDRICKS,
Evergreen, Ala.

"I received my order of Seeds, which I ordered February 29th, today, March 2nd, I got everything exactly O. K. It sure was packed fine and such quick service as your firm gave the order is surely something to be well proud of; and I hope to, next year, be able to send a very much bigger order.

"Thanking you very much for your quick service and wishing your firm every success, I am

Yours truly, A. R. BECKELER,
R. F. D. No. 1, Egg Harbor, N. J."

"I have ordered your Incomparable Second Early Beet Seed several times this season, and find them true to name. No mixture. We have been growing your Incomparable throughout the season for several years."

(Signed) HENRY J. HUSTER,
3758 Neosho St., St. Louis, Mo.

"All the seeds we got from you last year bore excellently, and we will have our large order in soon."

SEEDS For OUR SPECIALTY CONSERVATIVE BUYERS

ARTICHOKE

German, **Artischoke.** Italian, **Articiocca.** Spanish, **Alcachofa.**
French, **Artichaut.**

Large Green Globe: Perennial.—Grown for its large flower heads, and cooked like asparagus. Matures the second year.
Pkt., 10c.; oz., 40c.; $\frac{1}{4}$ lb., \$1.25; lb., \$4.50.

ASPARAGUS

German, **Spargel.** Italian, **Sparagio.** Spanish, **Esparragos.**
French, **Asperge.**

Cultural Directions.—One ounce for 300 roots.

Asparagus Seed is sown in the spring. The earlier the better after frost is out of the ground and the soil in good workable condition, not sticky. Scatter the seed an inch apart in drills 2 to 3 feet apart and cover with about $\frac{3}{4}$ -inch of soil. After the plants are well up thin them to stand not less than 2 inches apart. Such seedlings, if kept cultivated, free from weeds and not allowed to suffer from lack of water, during summer and autumn will be fit to be planted out in permanent beds the succeeding spring and should commence bearing in 3 or 4 years from seed sowing.

Mary Washington.—This variety is the result of careful breeding by the U. S. Department of Agriculture, Washington, D. C., with the object of eliminating rust. It produces large straight shoots of a dark green color. The tips are tight and firm and do not open out or begin to branch until well out of the ground; a very valuable feature.

Pkt., 10c.; oz., 15c.; $\frac{1}{4}$ lb., 40c.; lb., \$1.25; 10 lbs., \$11.50.

Early Giant French Argenteuil.—A variety imported from France, which is claimed to resist rust better than some American sorts. It produces an abundance of heavy dark green shoots and is very early.

Oz., 10c.; $\frac{1}{4}$ lb., 25c.; lb., 70c.; 10 lbs., \$6.00.

Palmetto.—A very early maturing and prolific variety, producing numerous deep green shoots of excellent quality. One of the most popular varieties.

Oz., 10c.; $\frac{1}{4}$ lb., 25c.; lb., 70c.; 10 lbs., \$6.00.

Starkey's Mammoth Prolific.—Originated at Bustleton, Philadelphia, and is well known in the Philadelphia market. Produces heavy green shoots of fine quality and always brings the highest market price.

Oz., 10c.; $\frac{1}{4}$ lb., 25c.; lb., 70c.; 10 lbs., \$6.00.

ASPARAGUS ROOTS

Cultural Directions.—A saving of one to two years is effected by planting roots. A bed 12 x 40 feet, requiring about 100 roots, should give a sufficient supply for an ordinary family; 5000 roots will plant an acre. Select good loamy soil, plow deep, put in a good quantity of manure and 100 pounds kainit to 1000 square feet of bed. Mix thoroughly, make a trench eight inches deep, set plants nine inches apart. In field culture, rows are placed four feet apart.

Postage Extra, 15c. per 100.

We can supply strong two-year-old roots of the following varieties:

Mary Washington, per 100, \$1.75; per 1000, \$12.00.

Early Giant French Argenteuil, per 100, \$1.50; per 1000, \$10.00.

Palmetto, per 100, \$1.50; per 1000, \$10.00.

Starkey's Mammoth Prolific, per 100, \$1.50; per 1000, \$10.00.

BEANS

German, **Zwerg Bohnen.** Italian, **Fagioli.** Spanish, **Haba.**
French, **Haricot.**

One pound of Beans equals one pint.

For postage on 5 lbs. and over, consult inside front cover.

We sell $\frac{1}{2}$ pounds at pound rate, 5 pounds at ten-pound rate, 25 pounds or over at hundred-pound rate, of one variety.
Prices Subject to Change Without Notice.

DWARF OR BUSH WAX PODDED VARIETIES

Cultural Directions.—Beans can be planted with safety any time from May 1st to August 1st. They do better in light, loamy soil, but will thrive well in any good soil. Sow in rows $2\frac{1}{2}$ or 3 feet apart; 2 lbs. will sow 100 feet of drill; 60 to 90 lbs. to the acre.

Brittle Wax or Round Pod Kidney Wax.

—The best of the round podded sorts, maturing early, prolific and bearing long stringless, waxy, yellow pods of excellent quality. Pkt., 10c.; lb., 35c.; 10 lbs., \$2.50; 100 lbs., \$23.00.

Burpee's New Kidney Wax.—A more robust and prolific grower than Wardwell's. The flat, brittle, fleshy pods are of a rich lemon color, stringless, and of fine flavor. Pkt., 10c.; lb., 35c.; 10 lbs., \$2.50; 100 lbs., \$23.00.

California Rust Proof Wax.—An extra early, extremely hardy variety, producing an abundance of handsome, long, yellow, flat pods. Pkt., 10c.; lb., 35c.; 10 lbs., \$2.40; 100 lbs., \$22.00.

Cracker Jack, or Webber Wax.—Since offering this unrivalled wax bean, we have received the most flattering testimonials from growers in all parts of the country commending its superior merits. It combines every quality that a bean should possess—extreme earliness, productiveness, immunity to spot or blight and vigorosity of habit. The pods are flat, of a beautiful golden color, very fleshy and entirely stringless. **Cracker Jack** is the most suitable name we can use to do justice to this remarkable wax bean, as it has never failed to give the utmost satisfaction.

Pkt., 10c.; lb., 35c.; 10 lbs., \$2.40; 100 lbs., \$22.00.

If wanted very early, sow in hotbeds and transplant, cutting off outer leaves. For early outdoor crop, sow about one inch deep in rows one foot apart as early as the ground can be worked. When plants are large enough, thin out to three inches apart in rows. One ounce will sow 50 feet of drill, six to eight pounds for an acre.

One ounce will produce 2000 plants; half-pound required to transplant an acre.

Cultural Directions.—The early varieties of Cabbage in our Northern States must either be sown in hotbeds in February, or, what is still better, wintered over in cold frames; for this purpose the seed is sown from the 10th to the 20th of September. Cover the seed $\frac{1}{4}$ -inch deep. The plants are set out from the middle of March to the middle of April, in rows about two feet apart, and eighteen inches between the plants in rows. This earliest crop matures in July. For second early the early kinds should be sown first week in April and planted out in May. This crop matures in August and September. Late Cabbage for fall and winter use sow from May to June. The plants are set in July, at distances of $2\frac{1}{2}$ feet between the rows and $2\frac{1}{2}$ feet between the plants. This crop matures in October and November.

First Early Varieties

Pkt., 10c.; oz., 35c.; $\frac{1}{4}$ lb., \$1.00; lb., \$3.50; 10 lbs., \$34.00.

CHINESE CABBAGE

Cultural Directions.—This exceptionally fine vegetable is a native of China, and possesses striking characteristics which place it in a class by itself.

Grows like Cos-lettuce and when its outer leaves are stripped off shows a picture of Lettuce and Celery combined.

Shredded, it makes the finest slaw, and stripped of its mid-ribs, which are eaten as celery, it makes a fine salad.

It possesses a very mild flavor.

Sow the seed like regular Cabbage. If for early planting sow in hot beds in February; if for later planting sow early in July.

This plant matures 12 to 15 weeks from time of sowing seed, and will not stand frost.

CARROT

German, **Gelbe Rueben.**
French, **Carotte.**

Italian, **Carota.**
Spanish, **Zanahoria.**

Cultural Directions.—1 oz. for 100 feet of drill, 4 pounds for an acre.

The carrot, like other root crops, delights in a rich, sandy loam, well tilled. For early crops, sow in spring, as soon as the ground is in good working order, say April or May; for late crops they may be sown any time from the middle of June to July. Sow one-half inch deep in rows 12 inches apart, thinning out to three inches between the plants. As Carrot seed is slow to germinate, extra precautions must be taken to firm the seed in the soil.

Chantenay, or Model.—One of the most popular carrots. Half long, stump rooted, smooth and good color. Medium-size top and medium early. Grown principally for bunching, but can also be used for a bushel carrot.

Pkt., 10c.; oz., 15c.; $\frac{1}{4}$ lb., 35c.; lb., \$1.00; 10 lbs., \$9.00.

Danvers Half Long.—Half long, smooth and good color. It grows longer than Rubicon and does not make so quickly. Generally grown for late or main crop. It makes an excellent barrel carrot to sell through the winter.

Danvers Special Half Long.—A selected strain of Danvers, producing very uniform roots of an exceptionally deep orange color. It is nearly the same thickness from top to bottom and on account of this bushels up rapidly. The illustration we show is from a photograph.

Early Short Top Forcing.—The best for first outdoor crop. Ideal for growing under glass, as the tops are small, and it develops its deep orange color when quite young. It is a half-long, stump-rooted variety and matures very early. Not recommended for summer, as it will not hold its top.

Half Long Nantes.—A handsome stump rooted variety of a bright orange color, smooth skin, small top and free from stringiness. Excellent for bunching. Pkt., 10c.; oz., 15c.; $\frac{1}{4}$ lb., 40c.; lb., \$1.25; 10 lbs., \$11.50.

CAULIFLOWER

German, **Blumenkohl.**

French, **Choufleur.**

Italian, **Cavolfiore.**
 Spanish, **Coliflor.**

Cultural Directions.—Cauliflower requires the same treatment and cultivation as cabbage and can be grown both early and late. Not so hardy as cabbage in resistance to either hot, dry or cold weather. They should have an abundance of water in the summer and protection during cold weather.

For early crop sow in hotbed in January or February and transplant when freezing weather is past. For late crop, sow in May or June and treat exactly like late cabbage. Set out the plants 15 to 18 inches apart in 3-foot rows.

One ounce of seed will produce 2000 plants.

Simon's Early Perfection

SIMON'S SUPERB CELERIES

Of Exceptional Merit

Simon's Special Golden Plume

Golden Plume

CELERY

German, *Sellerie*.

French, *Celerl*.

Italian, *Sedano*, accl.

Spanish, *Apio*.

Cultural Directions.—Celery requires water, and lots of it, from the time the seed is sown in boxes in March, until it is pulled in the autumn or winter. The seed is slow to germinate, and the soil where it is planted needs to be kept very wet.

Plant seed in hotbed or very early in open ground. When 3 inches high transplant 4 inches apart in rich soil, finely pulverized; water and protect until well rooted. In June or July transplant into rows 3 to 4 feet apart, either on surface or well-manured trenches a foot in depth, half filled with well-rotted manure. Set the plants from 6 to 8 inches apart. To blanch, draw earth around the plants from time to time, taking care not to cover the top of the centre shoots.

One ounce of seed will produce 3000 to 5000 plants.

Columbia.—A recent introduction. Plant medium height, with thick ribs, and well hearted. In season it is quite early and the quality is unsurpassed.

Pkt., 10c.; oz., 25c.; $\frac{1}{4}$ lb., 75c.; lb., \$2.50.

French Golden Self-Blanching (Old Strain).—Plant short and stocky, with a full heart and broad ribs. This is the original strain that has been on the market for years.

Pkt., 15c.; oz., 65c.; $\frac{1}{4}$ lb., \$2.10; lb., \$8.00.

TESTIMONIAL

"On November 16, 1929, you sent me a sample of your Special Golden Plume Celery seed. This seed was planted along with your Golden Plume, and also with seed from other houses. About a month before harvest it was quite distinguishing to note that this Celery spread less, but made up for this in height and uniformity of size in the stalks. I noted also that it bleached very nicely and was less subject to rust as the outer and older leaves were practically free, and same care was given to the entire field. This Celery was recently cut, and although I was unable to market it separately on account of the small amount, it turned out mostly 3's and 4's, much heavier than the adjoining Celery. I am so well pleased with this strain that I am planning to put one-half of my acreage to this strain next year."

(Signed) C. G. Tilden, Florida.

We sell $\frac{1}{2}$ pounds at pound rate, 5 pounds at ten-pound rate, 25 pounds or over at hundred-pound rate, of one variety.
Prices Subject to Change Without Notice.

French Golden Self-Blanching (New Strain).—This strain grows 8 to 10 inches taller than the old strain. The ribs are much broader and it does not contain as many heart stalks.
Pkt., 15c.; oz., 75c.; $\frac{1}{4}$ lb., \$2.60; lb., \$10.00.

Golden Plume is the last word in Self-Blanching Celery. It is a week earlier, blanches more easily, and is far more resistant to blight and crown-rot than Golden Self-Blanching. It has a beautiful golden color, is crisp, free from strings and has that rich nutty flavor so much desired by lovers of fine Celery.

Pkt., 15c.; oz., \$1.00; $\frac{1}{4}$ lb., \$3.25; lb., \$12.00.

Golden Plume, Simon's Special.—We consider this a decided improvement on Golden Plume. The plants are 5 inches taller, more compact, heavy and full hearted. The stems are much longer to the joint, are broad and thick, brittle, free from strings and of excellent quality.

Pkt., 25c.; oz., \$2.25; $\frac{1}{4}$ lb., \$8.00; lb., \$30.00.

Giant Pascal.—For quality this is one of the best. Plant vigorous, stout, but rather shy hearted, and requires careful handling, as it is very brittle. A good, late keeper. Used extensively around Boston. Our stock is true and will give excellent satisfaction.
Pkt., 10c.; oz., 25c.; $\frac{1}{4}$ lb., 75c.; lb., \$2.50.

Perfection Golden Self-Blanching.—The most popular and best of the early varieties. Our stock of this most important variety is perfection in every respect. The ribs are broad, the plant very stocky and full hearted. It is free from the objectionable green sorts. Plants of a yellowish-green color, but as they mature they turn to a beautiful golden yellow. Critical growers will find our strain of this important variety unsurpassed.

Pkt., 15c.; oz., 65c.; $\frac{1}{4}$ lb., \$2.10; lb., \$8.00.

Perfection White Plume.—The earliest celery, but not compared in quality or appearance with Golden Self-Blanching. As the plant matures, the inner stems and leaves turn white, and require but a short time to be earthed up before it is in condition for use. Can be bleached with boards. Our stock will give excellent satisfaction. Pkt., 10c.; oz., 25c.; $\frac{1}{4}$ lb., 85c.; lb., \$3.00.

CELERY—Continued

Sanford Superb or Easy Bleacher.

SANFORD SUPERB or EASY BLEACHER

The three stalks shown above were grown by M. V. Dilkes, Philadelphia.

Sanford Superb, or Easy Bleacher.—This is the most valuable variety of recent introduction. Planted the same time as Golden Self-Blanching it will be ready for market two weeks later. Bleaches readily with boards and grows well both on muck and upland. It is equally stout and a trifle taller than Golden Self-Blanching, and much less susceptible to blight. The eating and keeping qualities are both superior to Golden Self-Blanching. This is the popular green variety so extensively grown in the famous Celery centre of Sanford, Fla.

Pkt., 10c.; oz., 45c.; $\frac{1}{4}$ lb., \$1.35; lb., \$5.00.

Simon's Winter King.—Plant medium height, exceedingly stocky, with thick, heavy ribs. The quality is exceptionally fine, being equal to Giant Pascal, and contains more heart stalks than this variety. It can be marketed by November 15th, and by keeping it cold will retain its good quality as late as April 1st in the vicinity of Philadelphia. We pronounce it the best late-keeping sort.

Pkt., 10c.; oz., 45c.; $\frac{1}{4}$ lb., \$1.35; lb., \$5.00.

Soup, or Cutting Celery.—Used to cut while young for flavoring. Sold as soup greens. (See Flavoring Celery.)

Pkt., 10c.; oz., 20c.; $\frac{1}{4}$ lb., 50c.; lb., \$1.50.

Winter Queen.—Of very stocky growth, particularly valuable on account of its excellent Winter keeping qualities. It has a full heart and makes a very attractive bunch.

Pkt., 10c.; oz., 25c.; $\frac{1}{4}$ lb., 75c.; lb., \$2.50.

Celeriac, or Turnip-Rooted Celery

German, **Knollen Selleric.** Italian, **Sedano-Rapa.**
French, **Celeri-rave.** Spanish, **Apio raiz de Nabo.**

Cultural Directions.—This plant forms a thick root, which is used instead of the stalks. It is fit to use when about two inches in diameter. Seed should be sown and given same treatment as Celery, but the plants do not require earthing up. Plants can be set six inches apart in rows two feet apart. To keep over Winter, treat same as carrots or beets, except that moist soil should be worked in about the roots to keep them plump.

Large Smooth Prague.—Very large, round roots, quite smooth.

Pkt., 10c.; oz., 25c.; $\frac{1}{4}$ lb., 75c.; lb., \$2.50.

We sell $\frac{1}{4}$ pounds at pound rate, 5 pounds at ten-pound rate, 25 pounds or over at hundred-pound rate, of one variety.

German, **Chicorie.**

French, **Chicoree.**

Italian, **Cicoria Selvatica.**

Spanish, **Achicoria de Care.**

Cultural Directions.—Sow in open ground in June in rows 12 inches apart, selecting good, deep, rich soil. Roots should be taken up in November, selecting those that have attained a diameter of from $1\frac{1}{4}$ to 2 inches (discard divided roots and those with narrow leaves, as well as any which bear several heads). Trim off tops about $1\frac{1}{2}$ inches from the neck, and any secondary shoots that appear on the sides. Cut off the lower end of roots so they are of a uniform length of eight to ten inches. Plant in a trench 16 to 18 inches deep. Place roots upright one and one-half inches apart, fill the trench completely with good, light, well-drained soil. If speedy growth is desired, surface should be covered with manure, varying in depth according to quality and prevailing temperature, but never less than 16 inches nor more than three feet. In four to six weeks they should be blanched and ready for use. Placing manure under roots has not been satisfactory, the heads opening instead of remaining closed, from which it would appear a heavy pressure is needed in order to induce the heads to grow into the right shape. Eaten raw as a salad or boiled like Curled Endive.

Large Rooted, or Common.—This variety is cultivated principally for the roots, which, when matured, are dried and ground. It is a substitute for coffee, and is used sometimes for flavoring the latter. The roots can be boiled and served like Salsify.

Pkt., 10c.; oz., 20c.; $\frac{1}{4}$ lb., 45c.; lb., \$1.35; 10 lbs., \$12.50.

Witloof (French Endive).—This grows in a solid oblong head and blanches ivory white. When lifting, cut whole head with part of the roots to hold the leaves together. It is the choicest of all the winter salads, and is used to such an extent in this country that much of it is imported.

Pkt., 10c.; oz., 20c.; $\frac{1}{4}$ lb., 50c.; lb., \$1.60; 10 lbs., \$15.00.

COLLARDS

German, **Blattkohl.**

French, **Chou.**

Spanish, **Cabu.**

Italian, **Cavoli.**

Cultural Directions.—This is a tall, loose-leaved cabbage-like plant. It is extensively used for the table, as well as for stock feeding in the South, where it continues in growth and is usable throughout the entire winter. Collards usually succeed in locations where cabbage cannot be grown to perfection. Sow the seed thickly in drills, in rich ground, transplanting when about four inches high; or sow in drills where the plants are to remain and when well started thin to two or three feet apart in the row. In the South seed may be sown from January to May and from August to October.

Georgia, Southern or Creole.—This is the white or green stemmed variety, growing two to three feet high and forming a large, loose, open head or cluster of leaves with a rather long stem. A frost, if not too severe, will improve rather than injure the quality of the leaves.

Pkt., 10c.; oz., 15c.; $\frac{1}{4}$ lb., 25c.; lb., 65c.; 10 lbs., \$5.50.

CORN SALAD or FETTICUS

German, **Ackersalat.**

French, **Mache.**

Italian, **Valeriana.**

Spanish, **Macha o Valerianilla.**

One ounce for 100 feet of drill.

Cultural Directions.—Sow in August or September for winter or spring about one-quarter inch deep, in rows one foot apart. Thin out and keep clear of weeds. Protect in winter by thin covering of straw or meadow hay. Ready early in spring; use same as Lettuce. For summer use sow early in spring.

Large Seeded Broad Leaved.—Leaves large and broad. Used as a substitute for Lettuce and Spinach. The best sort.

Pkt., 10c.; oz., 15c.; $\frac{1}{4}$ lb., 45c.; lb., \$1.35; 5 lbs., \$6.25.

CRESS

German, **Kresse.**

French, **Cresson.**

Italian, **Agretto.**

Spanish, **Mastuerzo.**

Fine Curled, or Pepper Grass.—As early in spring as the ground can be worked sow the seed in rich, well prepared soil, in shallow drills about 16 inches apart, covering with about one-half inch of fine soil firmly pressed down. When the young plants are well started thin four to six inches apart in the row. For succession, plant every two weeks, thinning out as required for use.

Pkt., 10c.; oz., 15c.; $\frac{1}{4}$ lb., 25c.; lb., 65c.

True Water.—This is a distinct variety of Cress with small, oval leaves. It thrives best when its roots and stems are submerged in water. A fair growth may be obtained in soil which is kept wet, but does best when grown along moist banks or in tubs in water-covered soil. It is one of the most delicious of small salads and should be planted wherever a suitable place can be found. The seed is usually sown and lightly covered in gravelly, mucky lands along the borders of small, rapid streams. The plants will need no subsequent culture, as under favorable conditions they increase very rapidly by self-sown seed and extension of the roots. When gathered for the market the shoot should be cut, not broken off. In summer it is best to cut them closely, the oftener the better.

Pkt., 10c.; oz., 40c.; $\frac{1}{4}$ lb., \$1.25; lb., \$4.50.

CORN—Table Varieties

German, **Zuckermals.**
French, **Mais.**

Italian, **Maiz, Granone dolce.**
Spanish, **Maiz.**

For postage on 5 lbs. and over, consult inside front cover.

One pound for 150 hills; 12 to 16 pounds in hills for an acre.

Cultural Directions.—All varieties of Sweet or Sugar Corn may be either sown one inch deep in rows three to four feet apart, and the seeds placed about eight inches apart in the rows, or planted in hills at distances three or four feet each way, according to the size of the variety grown or the richness of the soil in which it is planted. The taller the variety, or the richer the soil, the greater should be the distance apart. We make our first plantings in this vicinity about the first of May and continue successive plantings every two or three weeks until the last week in July. In more Southern latitudes planting is begun earlier and continued later. The earliest varieties of Sweet Corn are ready for the table in eight or nine weeks from the seed sowing and the late varieties from eleven to twelve weeks.

First Early Table.—The first table corn with a decent sized ear to come into the market. It is not strictly sugar corn, the grain being white and smooth, but if pulled at the proper time it is fairly sweet and sells remarkably well. Can be planted earlier than the shriveled grain sorts, as it will stand more cold, wet weather.

Pkt., **10c.**; lb., **35c.**; 10 lbs., **\$2.20**; 100 lbs., **\$20.00.**

Golden Bantam.—Very early and of excellent quality. Ear small and grain yellow. Fodder dwarf.

Pkt., **10c.**; lb., **35c.**; 10 lbs., **\$2.40**; 100 lbs., **\$22.00.**

Simon's Early Wonder.—This new, sweet corn is truly a wonder. It is three to five days earlier than White Cory, with a larger and much better shaped ear. The quality is far superior, being better than any of the early varieties. The ears, when husked, are eight inches long with ten to twelve rows.

Pkt., **10c.**; lb., **35c.**; 10 lbs., **\$2.40**; 100 lbs., **\$22.00.**

Simon's Perfection Second Early.—The best medium early to follow the extra earlys. Fodder 5 to 6 ft. high often producing two ears with 16 to 18 rows of deep wedge-shaped grains of the Evergreen type. It matures with Howling Mob. TESTIMONIAL

I am writing to you for a little advice along the line of advertising by way of using a label on all of my boxes.

One of my specialties is radishes. Varieties as follows: White Icicle, Cincinnati Market, Crimson Giant, Sparkler White Tip and Hot House. Model Chantenay Carrot, Purple Top White Globe Turnip, Beets, Kleckley's Sweet Watermelon and Klondike, Golden Beauty Casaba and Cantaloupe.

I get all my vegetable seed from I. N. Simon & Son, because they show up well and show good breeding, on account of this fact I am able to sell all I can grow to the best trade both wholesale and retail. I wanted a neat label showing each article in its natural color and shape, and the name "Johns Best" or something of the kind. Do you think this will pay?

Read What Other Growers Say About Kirby Cucumbers

"It gives us much pleasure in recommending Kirby Cucumber supplied by I. N. Simon & Son, of Philadelphia, under their seal. We have used it ever since it was introduced by them and have had an increasing demand year after year. It has given our growers entire satisfaction and they insist upon having it in sealed packages. We cannot recommend it too highly and feel that any grower planting any other cucumber for the Northern and Western markets is doing himself an injustice. Wishing you every success."

(Signed) WAUCHULA FARMERS SUPPLY CO.,
Florida.

"I have planted the Kirby Cucumber ever since it was introduced by Mr. Kirby of I. N. Simon & Son, Philadelphia, Pa., and have found it to be the best variety to grow for either Eastern or Western markets. It is earlier than any variety that we have ever planted, more productive and makes a larger percentage of No. 1 cucumbers than any we have grown. It is the darkest in color and its uniformity in size makes it the most valuable cucumber in the market. I purchase all my seed from I. N. Simon & Son, under their seal and my share croppers this season have planted 1,500 pounds."

(Signed) J. S. BEVILLE, Florida.

February 24, 1930.

"I want to express my thanks for the sample pkt. of Kirby Cucumber seed you sent me last spring. It is the best cucumber I have ever raised. It is earlier, smoother and yields more and stays green longer than any I have ever tried, and also the best seller. I am not going to plant any other kind this season. I meant to write you sooner but just neglected it."

"Would appreciate getting your prices on seed in quantities. I had such wonderful success with your seed last year, will want to plant them altogether this year. The Kirby Cucumber is decidedly the finest we have ever planted."

(Signed) J. WADE DICKMAN, South Carolina.

"Kirby seed is far superior to any other variety. I would not plant if I could not get Kirby's, because I know what they will do. I made over 700 crates on one and one-half acres and Kirby sold when others would not. Kirby's good enough for me."

"I have just made my first cutting for pickles, 'The Kirby,' and want to say I am sorry I did not make my entire planting of 'Kirby.' Do not grow for Cucumbers, but am satisfied from the few large ones, they can't be excelled for Cucumbers, and as pickles, I have tried them all and the 'Kirby' is a winner in color and shape."

CUCUMBER—Continued

German, **Gurke.**French, **Concombre.**Italian, **Cetriolo.**Spanish, **Pepino.**

Cultural Directions.—Cucumbers succeed best in warm, moist, rich, loamy ground. They should not be planted in the open air until there is a prospect of settled warm weather. Plant in hills about four feet apart each way. The hills should be previously prepared by mixing thoroughly with the soil in each, a shovelful of well-rotted manure. Sprinkle the vines liberally with Slug Shot to protect them from bugs, and when all danger from insects is past, thin out the plants, leaving three to four of the strongest to each hill. **One ounce of seed will plant about 50 hills; two pounds will plant an acre.**

Simon's Famous White Spine

DANDELION

German, **Loewenzahn.**
French, **Pissenlit.**Italian, **Dente de leone.**
Spanish, **Amargon.**

Cultural Directions.—The seed is sown one-half inch deep in the open ground as soon as it can be worked in spring, in rows one foot apart, thinning the plants to about three inches apart if grown for "Greens" or if to be blanched for salad the rows should be 15 to 18 inches apart and the plants thinned to about eight inches. A gathering of young leaves may be made in eight or nine weeks from seed sowing and be continued until the growth gets too old and bitter. The plants being hardy if allowed to stand over winter, will yield a very early crop of tender young leaves the following spring. One ounce will sow 100 feet of drill.

LETTUCE

German, **Lattich Kopfsalat.**French, **Laitue.**Italian, **Lattuga.**Spanish, **Lechuga.**

Cultural Directions.—Lettuce thrives on nearly all soils, but because the growth should at all times be rapid to insure crispness and best flavor, the soil should be heavily enriched and well worked before planting. Lettuce being quite hardy, seed may generally be sown as soon as ground can be worked. While prolonged or continued freezing will kill the plants, they are but little injured by an ordinary frost. Seed may also be sown in the hotbed in gentle heat, and the plants, if well hardened by having been often exposed to the air, may usually be set in the open ground very soon after the time suggested for sowing seed outdoors. Planting guide on page 1 tells when.

One ounce will sow 150 feet of drill.

All Seasons.—A good variety to plant throughout the season. Head good size and compact.

Pkt., 10c.; oz., 15c.; $\frac{1}{4}$ lb., 45c.; lb., \$1.35; 10 lbs., \$12.50.

Big Boston.—One of the most popular varieties. Heads large and very solid. One of the best for shipping long distances. While this variety does exceedingly well in the spring and fall, we do not recommend it for summer, as it is apt to burn in the heart. Cold weather will also turn outer leaves red.

Pkt., 10c.; oz., 15c.; $\frac{1}{4}$ lb., 45c.; lb., \$1.35; 10 lbs., \$12.50.

Black Seeded Big Boston.—A very fine uniform strain of Big Boston, which produces black seeds instead of white. Heads are larger than the white-seeded, are equally firm and will stand a few days longer before bolting to seed.

Pkt., 10c.; oz., 20c.; $\frac{1}{4}$ lb., 50c.; lb., \$1.60; 10 lbs., \$15.00.

Black Seeded Simpson.—One of the best loose-leaved curled sorts for sowing outdoors. Can be grown all through the season. Very tender and remains in condition for use for a long time.

Pkt., 10c.; oz., 15c.; $\frac{1}{4}$ lb., 45c.; lb., \$1.35; 10 lbs., \$12.50.

Black Seeded Tennisball.—Heads firm and medium size. A good variety throughout the season, but especially adapted for early sowing outdoors.

Crisp as Ice.—A slightly elongated, medium sized, compact heading variety; leaves very broad, somewhat blistered and crumpled and very thick and stiff; outer leaves variegated dark brown and green, the brown predominating; quality excellent.

Pkt., 10c.; oz., 20c.; $\frac{1}{4}$ lb., 50c.; lb., \$1.50; 10 lbs., \$14.00.

Dreer's All Heart.—Similar to Salamander. The head is more compact and it stands the heat better than Salamander. We recommend it as an excellent sort to sow through the summer months.

Pkt., 10c.; oz., 20c.; $\frac{1}{4}$ lb., 50c.; lb., \$1.50; 10 lbs., \$14.00.

French Big Boston, Without Red Edge.—This is an excellent type. It heads very uniformly and is extremely hardy, never turning red from cold.

Pkt., 10c.; oz., 20c.; $\frac{1}{4}$ lb., 50c.; lb., \$1.75; 10 lbs., \$16.50.

Grand Rapids.—The best loose-leaved curled variety for forcing. It is a very rapid grower, and will stand high temperature. It does not wilt quickly after cutting, and will therefore stand shipping.

Pkt., 10c.; oz., 15c.; $\frac{1}{4}$ lb., 45c.; lb., \$1.35; 10 lbs., \$12.50.

Hopkins' Big Boston.—The most uniform pure and sure-heading strain we have ever seen. Nearly every plant makes a salable head, and it contains practically no off types. We have taken great care to keep this true and uniform.

Improved Salamander.—One of the most popular and best all-season heading sorts. The leaves are thin, tender and buttery. The quality is all that could be desired. Paris White Cos.—This variety is lighter in color than Trianon. Pkt., 10c.; oz., 20c.; $\frac{1}{4}$ lb., 50c.; lb., \$1.50; 10 lbs., \$14.00.

Prize Head.—One of the very best loose-bunching or non-heading varieties. Leaves brown, very curly and of remarkably fine flavor. Grows quickly, and all except the outer leaves are very brittle. It is probably the most easily-grown lettuce in cultivation.

Pkt., 10c.; oz., 15c.; $\frac{1}{4}$ lb., 45c.; lb., \$1.35; 10 lbs., \$12.50.

Silesia Early Curled.—A loose-leaved curled variety, similar to Black Seeded Simpson. It matures somewhat earlier.

Pkt., 10c.; oz., 15c.; $\frac{1}{4}$ lb., 45c.; lb., \$1.35; 10 lbs., \$12.50.

Simon's Cabbage Head.—This is one of the finest varieties of lettuce ever offered, and is superior to Big Boston in many ways. It does not scald in the heart and does not turn red from cold. It is just as large and firm as Big Boston, and is a little lighter in color. Some market gardeners grow it throughout the season, but we especially recommend it for spring and fall use. If you have been using Big Boston, try this, for it will surely please you.

Simon's Dutch Butter.—A selection from Philadelphia Dutch Butter. Heads are larger and it heads up more uniform. The leaves have fewer spots on them. We have taken extra pains to have this important variety bred up to its present standing, and feel confident that the strain we offer is as good as can be produced.

Pkt., 10c.; oz., 25c.; $\frac{1}{4}$ lb., 75c.; lb., \$2.50; 10 lbs., \$24.00.

Simon's Hot Weather.—We have found this to be absolutely the best firm-heading lettuce to grow through the summer months. It will not scald or burn and will make a head when other varieties fail. It somewhat resembles Salamander in character of leaf, color and size, but the head is more compact, and it will stand longer before bolting to seed. It is practically all head, having very few outer leaves. It heads up quickly, making it valuable for an early crop. After repeated trials we have found it to be the best smooth-leaved, firm-heading, all-season variety.

ONION

German, Zwiebel.

French, Oignon.

Italian, Cipollo.

Spanish, Cebolla.

Cultural Directions.—The Onion thrives best in a rather deep, rich loamy soil, and, unlike most vegetables, succeeds well when cultivated on the same ground for successive years. The best culture requires that the ground should be deeply trenched and manured the previous autumn, and laid up in ridges during the winter to pulverize. As early in the spring as the ground is in working order, commence operations by leveling the ground with a rake and tread it firmly; sow thinly in drills about one-fourth of an inch deep, 1 foot apart; cover with fine soil, and press down with the back of a spade or a light roller. When the young plants are strong enough thin gradually so that they stand 3 or 4 inches apart. Keep the surface of the ground open and free from weeds by frequent hoeing, taking care not to stir the soil too deeply, or to collect it about the growing bulbs. Early Green Onions can best be obtained by planting Egyptian Top Onion Sets which are only planted in the fall and produce an early scallion. The Egyptian Onion does not produce a bulb; it is grown only for its green top for early spring use. They should be planted one inch deep.

Onion sets are planted early in the spring to produce an onion earlier than from the seed.

One ounce of seed is sufficient for 100 feet of drill, 5 to 6 pounds for one acre. One quart of onion sets will plant 50 feet of drill.

Ailsa Craig.—The great English exhibition onion. It is globe-shape, slightly pointed at the top and base, color straw yellow. It grows to gigantic size. PEAS
Early Varieties

German, **Erbsen.** Italian, **Pisello.** French, **Pois.** Spanish, **Gulsante.**

Cultural Directions.—Peas do best in a light, rich loamy soil that has been liberally manured the previous season. Plant the smooth varieties as early as the ground can be worked. The wrinkled peas are not so hardy as the smooth kinds, and should be planted later; they are, however, sweeter and better flavored. For a succession, plant every two weeks—until June 1st, then discontinue until August 1st, when the extra early varieties may be planted for a fall crop. When grown for market, peas are rarely staked; in small gardens grow in double rows, 12 inches apart, and stake with brush. They should be kept clean and the earth worked toward them two or three times during growth.

Two pounds will plant 100 feet of drill; 120 pounds for an acre.

TOMATO

German, **Liebesapfel.**

French, **Tomate.**

Italian, **Pomo d'oro.**

Spanish, **Tomates.**

Cultural Directions.—Tomatoes do best on warm light moderately rich soil, and success depends to a great extent on securing rapid and unchecked growth in the early part of the season. For early crop, sow seed in hot-bed in January, transplanting to cold frame when plants have at least four leaves, in order to strengthen the body of the plant, and transplanting later to open ground, after all danger of frost is over, in rows 3 to 4 feet apart, and 3 feet apart in the rows. For later crop sow seed any time up to middle of June. Spray regularly, to prevent blight. For the private garden, trellising the vines will prevent rotting, due to the fruit lying on the ground.

One ounce will produce about 3000 plants

Acme.—A popular early, purple-fruited sort of medium size.

Break O'Day.—The earliest, disease resistant, globe shaped, scarlet fruited, meaty Tomato yet introduced. 10 to 12 days earlier than Marglobe, and very productive. Break O'Day will fill a long felt want for an early Tomato with the good qualities of the popular later sorts. It was developed by Dr. Fred J. Pritchard, senior Physiologist of the U. S. Dept. of Agriculture, and is a cross between Marglobe and Marvana, having the disease resistant quality of its parents. Vine is of open habit similar to Marvana, but heavier in growth. Fruits are of the Marglobe type, deep globe shaped, solid—meaty, with few seeds, and a beautiful scarlet color. Excellent for home gardens, truck farmers or canners. It is destined to be the "PEER" of early Tomatoes. Try it.

Pkt., 10c.; oz., 30c.; $\frac{1}{4}$ lb., 90c.; lb., \$3.25; 5 lbs., \$15.75.

FROM A PLEASED CUSTOMER

I bought an ounce of Extra Early Mascot Tomato from you last winter and I raised about 100 hampers from it. These are the most wonderful yielders I ever saw, and all fine Tomatoes.

S. J. Graham, Ponchatoula, La., Box 108.

ANOTHER PLEASED CUSTOMER

Your Early Mascot was fully two weeks earlier than the Earliana with me. They are unsurpassed for an early Tomato.

Your Sweet Peas were perfectly beautiful. They bloomed from June until fall. Such a mass of flowers I have never seen before.

Marglobe (Special Stock).—This Great New Tomato introduced by the U. S. Dept. of Agriculture through the efforts of Dr. Fred J. Pritchard, of the Bureau of Plant Industry is **the last word in Tomatoes.**

Never before has a hybrid of such great promise been brought to our notice. Its fine appearance, great productiveness, deep globe shape and superb table qualities is giving it first place wherever known. Its spreading habits of growth enable it to bear large, perfect globe-shaped fruit in great abundance. In color it is a most beautiful scarlet, ripening well up to the stem. Its eating qualities, likewise, are very much superior to most of the common varieties. In the south, especially on the East Coast of Florida where there is danger of nail-head rust, "The Marglobe" has proven resistant to the disease, and is being planted almost exclusively to all others.

Pkt., 20c.; oz., 75c.; $\frac{1}{4}$ lb., \$2.25; lb., \$8.00.

SIMON'S PERFECTION LAWN GRASS SEED

QUALITY OF SEED

Good seed is of greatest importance, and next is the preparation of the soil, for upon this depends the life of the lawn. One of the first conditions for a perfect lawn is, that the land be perfectly drained either naturally or artificially. Five inches of good soil should overlay the sub-soil and where trees are planted there should be at least twice that depth of good soil. Dig deeply and rake until thoroughly fined down; all stones, roots, etc., should be removed so that a smooth surface may be obtained. After seed is sown the ground should be tamped with the back of a spade or rolled.

FERTILIZERS

The question of fertilizer is an important one. After digging, use well-rotted stable manure or pulverized Sheep Manure, spread thickly enough to cover the ground, then harrow or rake it in. Though a little more costly the best plan, to insure permanency for the lawn, is to use 1500 to 2000 pounds per acre of coarse ground bone, as it decomposes slowly, giving lasting enrichment. For small areas use 10 pounds to 300 square feet.

SEED SOWN ON A GIVEN AREA

One quart is sufficient for a space, 10 by 20 feet, or five bushels per acre, for new lawns, or half that quantity for renovating old lawns. In the latitude of Philadelphia, seed may be sown any time from April to June, also during the early fall months (September being the best).

Simon's Perfection Mixture represents what the name implies, a "Perfect Lawn." It is made up of an intelligently arranged combination of eleven fine-leaved dwarf grasses, which are at their best during different months of the year, thus insuring that carpet of deep velvety green so much desired by lovers of good lawns, and is as fine in quality as years of experience and careful selection of seeds can make it.

Lawns.—By F. F. Rockwell. You will find use for this information year after year, for it shows both how to start a lawn right and how to keep it smooth and velvety thereafter. Full of suggestions on laying out the lawn, grading, fertilizing, planting, care after planting, weed and pest control, and remaking and repairing old lawns. 39 illustrations, 87 pages. Fairmount Park Mixture.—A good mixture of grasses that is less expensive than our Perfection mixture.

Shady Nook Mixture.—On many lawns are bare spots under shade trees. Such spots are frequently sour, perhaps covered with a green scum or moss. In such cases apply hydrated lime, which is powdered fine, at the rate of one bushel per thousand square feet, removing all moss or scum first and then loosening the soil in same manner as already prescribed for regular lawn making. Our mixture of grass seed for shaded spots is one best adapted to the requirements of much shaded lawns and will grow perfectly where an ordinary grass mixture would fail.

Pt., **25c.**; qt., **45c.**; 2 qts., **80c.**; 4 qts., **\$1.50**; pk., **\$2.75**; bu. (20 lbs.), **\$10.00**; 100 lbs., **\$47.50**.

Golf Links Mixture.—This mixture of grass seed is giving the best of satisfaction, being composed in proper proportions of the hardy and dense growing kinds best adapted for the purpose. Stands heat and drought well, and being deep-rooted will withstand wear and tear.

Terrace, or Embankment Mixture.—It is usually difficult to establish turf on steep inclines or on terraces. This mixture is composed of deep rooting varieties which will give satisfactory results.

Pt., **25c.**; qt., **45c.**; 4 qts., **\$1.50**; pk., **\$2.75**; bu. (20 lbs.), **\$10.00**.

Permanent Pasture Mixture.—To get a really good pasture that will last for many years, it is necessary to sow grasses that will form a close heavy turf and such as are not injured by close cropping and tramping of the animals. There are many grasses of this kind. Some start early in the spring and others continue growing late in the fall, so a considerable number of different kinds should be used. With this thought in view we have made a mixture best suited to make a permanent growth calculated to give a crop of hay if so desired or a good pasture. Sow $2\frac{1}{2}$ to 3 bushels per acre.

GRASS SEED—Continued

Creeping Bent.—One of the most valuable lawn grasses because of its short growth and deep green, fine-leaved foliage. Its stoloniferous roots form a strong, close enduring turf, which is not injured by being frequently walked on. Sow 2 bushels to the acre.
Lb., \$1.25; 10 lbs., \$12.00; bu. (20 lbs.), \$23.00; 100 lbs., \$115.00.

Creeping, or Red Fescue (*Festuca Rubra*).—Resists extreme drought, thrives on inferior soils, gravelly banks and exposed hills. Sow 25 lbs. per acre.
Lb., 50c.; 10 lbs., \$4.50; bu. (14 lbs.), \$6.30; 100 lbs., \$40.00.

Crested Dogstall.—A valuable addition for lawn grasses which require close cutting and an ability to resist tramping, as in golf links, etc. Sow 1 to 2 bushels to the acre.
Lb., 50c.; 10 lbs., \$4.50; bu. (21 lbs.), \$8.40; 100 lbs., \$40.00.

Lb., 45c.; bu. (12 lbs.), \$4.80; 100 lbs., \$35.00.

Italian Rye.—This is distinct from English Rye, the preceding being of much larger and stronger growth, with large, broad, glossy-green blades. It succeeds best in moist, fertile soils. Sow 3 bushels to the acre.
Lb., 25c.; 10 lbs., \$2.10; bu. (20 lbs.), \$3.20; 100 lbs., \$16.00.

Kentucky Blue.—Also called "June Grass;" an early grass of much value; will do well in any ordinary soil; stands the heat of summer remarkably well. For pastures and lawns it has no superior, giving that peculiar rich shade of bluish-green so much admired in the best lawns; also making a very close, velvety turf. It is usually sown mixed with other fine grasses, when used alone, 40 to 50 lbs. per acre. Blossoms in June, can be sown by itself either in spring or fall.
Lb., 60c.; 10 lbs., \$5.50; bu. (14 lbs.), \$7.70; 100 lbs., \$50.00.

Orchard Grass.—This grass stands the drought, and grows well in the shade, does well in wet or poor ground; produces large crops of hay and affords excellent pasture for stock. Sow 20 to 25 pounds per acre.
Lb., 40c.; 10 lbs., \$3.20; bu. (14 lbs.), \$4.48; 100 lbs., \$27.00.

Red Top, or Herd's Grass.—A permanent and very hardy native perennial grass, succeeding best on moist land, making a good pasture when fed close; is valuable for low, wet meadows, producing large crops of good hay. It accommodates itself to a variety of soils, however, even to quite dry situations, and stands our hot climate admirably. It is, perhaps, the most permanent grass we have. It remains green for the greater part of the year; sown with Timothy and Red Clover, its stems form a very close matted turf, not affected by tramping and of fair quality when not allowed to go to seed. Sow 1½ to 2 bushels per acre.

Red Top (Fancy Recleaned).—Lb., 45c.; 10 lbs., \$4.00; bu. (32 lbs.), \$11.20; 100 lbs., \$35.00.

Sudan Grass. A forage plant valuable in the middle West. Grows from six to ten feet high. Sow seed when ground has become warm, 4 to 6 lbs. per acre, in drills 18 to 24 inches apart, and cultivate like corn.
Lb., 22c.; 10 lbs., \$1.70; 100 lbs., \$12.00.

Pacey's Rye Grass.—Similar to English Rye. The growth is shorter and the grass somewhat finer, making it better adapted for lawns.

Lb., 30c.; 10 lbs., \$2.30; bu. (24 lbs.), \$4.35; 100 lbs., \$18.00.

Timothy.—This crop is cut for hay; probably surpasses any other grass in cultivation; it thrives best on moist, loamy soils, and is not well suited to light, sandy or gravelly soils, it should be cut just when the blossom falls. Sow either in spring or fall at the rate of 12 lbs. per acre if alone, but less if mixed with other grasses.

Lb., 25c.; 10 lbs., \$1.90; bu. (45 lbs.), \$6.30; 100 lbs., \$14.00.

Wood Meadow Grass.—Grows from one and one-half to two feet high, has a perennial creeping root and an erect, slender, smooth stem. Well adapted to shaded situations, such as orchards and parks. Sow about thirty pounds per acre.

Lb., 85c.; 10 lbs., \$8.00; bu. (15 lbs.), \$12.00; 100 lbs., \$75.00.

MILLETS

**WHITE
WONDER
MILLET**

White Wonder Millet has been raised in Western Kansas for several years, and it is just as hardy and vigorous as other millets.

The yield is extremely heavy, being fully half again as heavy as that of German Millet.

Another very desirable feature is its earliness. This variety is much earlier than German Millet, but not quite as early as the Siberian variety.

The foliage is very heavy, the leaves broad, and therefore it produces an immense amount of excellent fodder, which cures very readily.

Lb., 17c.; 10 lbs., \$1.20; bu. (50 lbs.), \$3.50; 100 lbs., \$7.00.

East India, or Pearl Millet (*Pennisetum*).—This makes a most nutritious and valuable continuous cutting forage plant, and is increasing in popularity throughout the country. It will grow 10 to 12 feet high, but cutting can be commenced when it has attained the height of 3 to 4 feet, when it will stool out enormously, and make a rapid growth, and it can be cut this way three or four times in a season. It is largely used by dairymen and others who have cattle, for furnishing them green food through the summer. If a sufficient quantity is sown, it can be cut as desired, furnishing a daily supply of green feed until killed by

freezing weather. It can be fed either green or cured as dry forage, making a most nutritious feed, which is relished by all kinds of stock.

Sow 20 to 30 lbs. per acre broadcast or 5 to 6 lbs. per acre in drills, 3 feet apart and cultivate lightly occasionally. Being a foreign millet from a warm country do not sow before May.

Lb., 23c.; 10 lbs., \$1.80; bu. (50 lbs.), \$6.50; 100 lbs., \$13.00.

Golden, or German.—This is the favorite variety for planting in good land to produce a large crop of hay or forage during the summer months, of very strong growth. 1 bushel to the acre. Tennessee grown.

Lb., 18c.; 10 lbs., \$1.30; bu. (50 lbs.), \$4.00; 100 lbs., \$8.00.

Hungarian.—An annual forage plant, early and productive, growing 2 to 3 feet high, with an abundance of foliage, often yielding 2 to 3 tons per acre. Sow 1 bushel to the acre.

Lb., 17c.; 10 lbs., \$1.20; bu. (50 lbs.), \$3.50; 100 lbs., \$7.00.

Japanese Barnyard.—Enormously productive, yielding from four to six tons of cured forage per acre on rich soils. Six to eight feet in height. Sow in May. Broadcast, ten to fifteen pounds per acre, or in drills, eight pounds per acre.

Lb., 17c.; 10 lbs., \$1.20; bu. (32 lbs.), \$2.24; 100 lbs., \$7.00.

MISCELLANEOUS FARM SEEDS

Barley—Six-Rowed

Finest sort for growing in Pennsylvania or New Jersey. Makes a good stiff straw, standing up well. Is the earliest variety, making a quick growing crop of excellent and nutritious green fodder, and is growing in popularity wherever used. It will also make a good grain crop, although its principal value is an early nutritious forage crop to feed green or to cure as hay. If for the latter it should be cut when in the milky state. Sow $2\frac{1}{2}$ bushels per acre as early as ground can be worked.

Per bu. (48 lbs.), **\$1.92**; lb., **10c.**; 10 lbs., **60c.**; 100 lbs., **\$4.00.**

Buckwheat—Japanese

Makes the finest buckwheat flour. The seed is grown from the largest type imported from Japan, and is much larger in grain than that usually offered. It ripens fully a week earlier than Silver Hull, straw is heavier and yield double. It branches more and does not need to be sown as thickly as other varieties. For bees it is of the greatest value and for this purpose has displaced all others. Sow 1 bushel per acre in June or July.

Per bu. (48 lbs.), **\$2.40**; lb., **12c.**; 10 lbs., **70c.**; 100 lbs., **\$5.00.**

Selected Seed Oats

New Victory.—This splendid, white branch Oat originated at the Royal Seed Breeding School of Svalof, Sweden. Straw is good length, stands up well and has a strong root system. Heads are branching and well filled with grain of the finest quality for milling or feeding purposes. The New Victory has been grown successfully in Pennsylvania, Ohio, Michigan, Indiana, Illinois, Wisconsin, Minnesota, the Dakotas, Montana, Wyoming and Nebraska. In Shelby County, Ill., these Oats yielded **134 Bushels per acre.** Other states gave yields of 90, 95, 100 and 105 bushels per acre. In Sweden where the weather was cool and ideal for maturing an oat crop, the Victory Oats yielded 125 to 150 bushels per acre, grain testing 40 to 48 pounds per bushel.

Per bu. (32 lbs.), **\$2.24**; lb., **12c.**; 10 lbs., **90c.**; 100 lbs., **\$7.00.**

Swedish Select.—Scientific breeders of seed in Sweden have devoted themselves to the improvement of Oats. Probably Swedish Select is the best all-around oat among them. It thrives well on all soils, is a strong grower and a great drought resister. The grain is short, plump and heavy. This variety is strongly recommended by the United States Department of Agriculture.

Per bu. (32 lbs.), **\$1.44**; lb., **10c.**; 10 lbs., **65c.**; 100 lbs., **\$4.50.**

Speltz or Emmer

This grain is of comparatively recent introduction in this country. It is claimed by some to be the primitive wheat, the kind grown by the ancients. It resembles rye in habit of growth, is early, will stand drought, yields well, makes a fine pasture or hay. The grain resembles wheat, but has a husk like barley. Sow in spring broadcast or in drills $1\frac{1}{2}$ to 2 bushels per acre.

Per bu. (40 lbs.), **\$2.40**; lb., **12c.**; 10 lbs., **80c.**; 100 lbs., **\$6.00.**

Sorghum or Cane—Early Amber

Furnishes a large yield of most nutritious forage, which can be fed either green or cured; and will yield two or three cuttings a year, stooling out thicker each time it is cut. The saccharine matter is of the finest quality, and it also produces a fine sugar or syrup. It grows ten to twelve feet high. This is the favorite sort in Northern and many Western States. Sow at the rate of one peck per acre in drills $3\frac{1}{2}$ to 4 feet apart.

Per bu. (50 lbs.), **\$4.00**; lb., **15c.**; 10 lbs., **\$1.00**; 100 lbs., **\$8.00.**

Sunflower—Mammoth Russian

Usually a very profitable field crop, the seed being used for bird and poultry feed. Plant and cultivate same as corn.

Lb., **20c.**; 10 lbs., **\$1.50**; 100 lbs., **\$10.00.**

Spring Rye

Although this grain is often planted, especially for papermakers, who prefer it to any other, its principal value is as a "catch" crop to sow where winter grain has failed. The straw is shorter and stiffer than that of the winter variety and is more easily harvested. The grain although smaller, is of equal value.

Per bu. (56 lbs.), **\$2.80**; lb., **12c.**; 10 lbs., **75c.**; 100 lbs., **\$5.00.**

Winter Rye

Rosen.—This new Russian rye is said to be the best variety now grown. The grain is large, plump and of light color. Straw is strong, very long and stands up well. The heads are long, well filled and an unusually heavy yielder. The Rosen is a distinct improvement over common rye and should be more extensively grown.

Sow $1\frac{1}{2}$ bushels per acre.

Per bu. (56 lbs.), **\$2.24**; lb., **10c.**; 10 lbs., **60c.**; 100 lbs., **\$4.00.**

Wisconsin Pedigree.—This improved variety was originated at the Wisconsin Experiment Station by selecting individual plants of the Pitkus Rye that produced the largest heads, best grain and largest straw. By keeping this selection up for 10 years or more a very fine "Pedigree" strain was obtained. It has uniformly long heads, large, light-colored grain, and tall, stiff straw. In many trials it has yielded from 8 to 12 bushels more per acre than common rye in the same field. Sow $1\frac{1}{2}$ bushels per acre.

Per bu. (56 lbs.), **\$2.24**; lb., **10c.**; 10 lbs., **60c.**; 100 lbs., **\$4.00.**

Jersey, or Common.—For plowing under.

Per bu. (56 lbs.), **\$1.68**; lb., **10c.**; 10 lbs., **50c.**; 100 lbs., **\$3.00.**

Spring Wheat—Marquis

This famous variety is of Canadian origin. It attracted great attention at the New York Grain Exposition in 1911 when it was awarded the \$1000 prize given by Sir Thomas Shaughnessy for the best wheat in America. It is extremely early and productive. A five year average at the Brandon Experiment Station was 44 bushels per acre. Milling tests show that it contains a greater amount of gluten, is a better color and shows greater absorption than any other spring wheat.

Per bu. (60 lbs.), **\$3.00**; lb., **12c.**; 10 lbs., **70c.**; 100 lbs., **\$5.00.**

Winter Seed Wheat

Sow in drills or broadcast $1\frac{1}{2}$ to 2 bushels per acre in September or October, north of Virginia; further south as late as November.

Per bu. (60 lbs.), **\$2.70**; lb., **10c.**; 10 lbs., **65c.**; 100 lbs., **\$4.50.**

Pennsylvania 44

Pennsylvania 44 Wheat is a selection of Fulcaster originating from a single head, selected in 1909 in a field of Fulcaster at the Pennsylvania Agriculture Experiment Station. In appearance it resembles the parent variety, but has a ranker growth of straw. It has red grains, is bearded, has white chaff and purple straw.

In milling and bread-making qualities it is like Fulcaster, one of the best bread varieties grown in the state.

In stiffness of straw, it is like Fulcaster and others of that type, and on rich soil or soil heavily manured it is likely to lodge.

At the Agriculture Experiment Station in the 10 years, ending in 1923, it surpassed the next highest in yield by an average of over three bushels per acre and in 91 farmers' co-operative tests conducted in various parts of the state, from 1919 to 1922, it averaged over five bushels more wheat per acre than the other varieties.

Klondike.—An exceptionally vigorous, white grained, bald wheat. A great stooler and withstands unfavorable weather conditions better than most white grained varieties. An excellent sort for milling.

Miracle.—Is a bearded, red grained sort, a little larger than the average wheat and its remarkable stooling habit makes it a heavy dropper. A popular milling sort.

Red Wave.—A vigorous, tall growing, red grained, bald variety. Popular on account of its hardness, stooling and good yielding qualities. It stands unfavorable weather conditions much better than the average wheat; extremely hardy, giving satisfaction everywhere. The grain is large and plump and well liked by millers.

COW PEAS

Weight 60 lbs., per bushel.

Invaluable for plowing under for green manure. They can be cut down for feeding or cured like clover and fed through the winter. Sow $1\frac{1}{2}$ to 2 bushels per acre broadcast about May 1st.

Gray Crowder, or Improved Whippoorwill.—Very early in maturity. The vines are not runners, but grow erect in bunches. The seed is brown speckled. Lb., 12c.; 10 lbs., \$1.00; 100 lbs., \$8.00; bu. (60 lbs.), \$4.80.

Large Blackeye.—This variety is more prolific, better flavored and brings a higher price than the ordinary Blackeye, and farmers will find it more profitable to plant; they make a more profitable crop to grow for picking the dry peas for sale in our markets during the winter. Lb., 15c.; 10 lbs., \$1.25; 100 lbs., \$10.00; bu. (60 lbs.), \$6.00.

New Era.—Upright in growth, quicker to mature than Whippoorwill, prolific in peas. The vines make a large growth, cure easily and make fine, dry forage. The seeds are of a dull red color, and, being smaller than ordinary Cow Peas, less seed is required to sow an acre, 1 to $1\frac{1}{2}$ bushels being ample. Lb., 12c.; 10 lbs., \$1.00; 100 lbs., \$8.00; bu. (60 lbs.), \$4.80.

Whippoorwill.—Very valuable, upright growing variety of medium height, producing large quantities of well-filled pods, which are very long. The plant makes excellent forage for cattle and hogs. Lb., 12c.; 10 lbs., \$1.00; 100 lbs., \$8.00; bu. (60 lbs.), \$4.80.

Mixed Varieties.—This comprises a combination of varieties that will give excellent satisfaction, either for hay or plowing under. Lb., 12c.; 10 lbs., \$1.00; 100 lbs., \$7.50; bu. (60 lbs.), \$4.50.

SOY OR SOJA BEANS

Weight, 60 lbs. per bushel.

Culture.—Sow about May 1st according to instructions given below.

The use of Soy Beans is constantly increasing on account of their value as a forage and feed crop as well as their great fertilizing properties. They can be sown with cow-peas to hold the pea vines off the ground, which thus can be cut and cured to better advantage for hay. They can be grown generally where corn can, and do equally well on light and heavy soils. Where a crop of Soy Beans is growing it is nearly impossible for weeds to grow. For hay or fertilizer they should be sown from 60 to 90 pounds to the acre. When sown for ensilage it is better to sow in corn at 15 to 20 pounds to the acre. Sow for the shelled Beans at the rate of 60 to 90 pounds to the acre, in drills $3\frac{1}{2}$ feet apart, and cultivate.

Hollybrook Early.—The earliest yellow seeded variety. Makes a quicker growth and matures its crop 2 or 3 weeks earlier than Mammoth Yellow, and makes a large yield both of forage and pods. It has special value where an early crop of Hay or Beans is required. Lb., 12c.; 10 lbs., 85c.; 100 lbs., \$6.00; bu. (60 lbs.), \$3.60.

Mammoth Yellow.—This variety will not mature seed in the North, but makes a large growth or forage and is used for hay and to plow under to improve the soil. Lb., 12c.; 10 lbs., 85c.; 100 lbs., \$6.00; bu. (60 lbs.), \$3.60.

Wilson's Early Black.—One of the best in our opinion for the Northern States, where a quick-growing variety is desired. Average height on good land is about three feet, requires from 100 to 115 days to mature. Its fine stem enables it to cure quickly, which is a point in its favor. Lb., 12c.; 10 lbs., \$1.00; 100 lbs., \$8.00; bu. (60 lbs.), \$4.80.

GENUINE DWARF ESSEX RAPE

There is no plant that will give so heavy a yield of forage at such a small cost as this, and its general cultivation would add largely to the profits of American farms. Especially valuable for green manuring and pasture. It will probably do more to restore and make profitable exhausted soils than any other plant.

Ground should be prepared same as for Turnips. Sow in June or July in rows two and one-half feet apart, at the rate of two and one-half pounds of seed per acre. It may be sown broadcast, either with other fall forage crops or by itself, using from one to five pounds of seed per acre. Lb., 20c.; 10 lbs., \$1.50; 100 lbs., \$10.00.

Dwarf Essex Rape.

VETCH

Halry, or Sand Vetch (Vicia Villosa).—An excellent plant for a winter cover crop to prevent leaching; also for forage and fertilizing. If sown in August or September it will make a good crop of forage the following spring. It is quite hardy and very seldom winter kills in the vicinity of Philadelphia, unless planted on wet, heavy soil. It is being used extensively in this vicinity for plowing under; also for dairy stock and poultry pasture. Sow 1 to $1\frac{1}{2}$ bushels per acre. If sown with rye, use $\frac{1}{4}$ to 1 bushel of Vetch with $\frac{1}{2}$ bushel of rye. Lb., 20c.; 10 lbs., \$1.65; 100 lbs., \$14.00; bu. (60 lbs.), \$8.40.

Spring (Vicia Sativa).—A perennial pea-like plant grown as an annual in the North. Desirable as a forage plant, and valuable as a cover-crop for orchards. Culture same as for field peas. Sow 90 to 120 pounds per acre. Lb., 15c.; 10 lbs., \$1.15; 100 lbs., \$8.00; bu. (60 lbs.), \$4.80.

CANADA FIELD PEAS

Entirely different from Cow Peas, requiring to be sown early in the spring, and maturing a crop ready for cutting in May or June. Makes a most satisfactory and large yielding early forage crop. When sown alone, use $1\frac{1}{2}$ to 2 bushels per acre, but a seeding of Oats along with them will increase the yield and help support the pea vine. Lb., 15c.; 10 lbs., \$1.00; bu. (60 lbs.), \$4.80; 100 lbs., \$8.00.

BROOM CORN

One bushel weighs 46 pounds.

Culture.—Sow in drills 3 feet apart at the rate of 8 to 10 pounds per acre, thinning out stalks about 70 to the rod. Cultivate as for corn. Rich land requires thicker seeding and more stalks than medium or poor soil. Cut when seed is in the milky state.

Evergreen.—Where the location is suitable for growing Broom Corn, farmers find it a paying crop, as the demand for the brush exceeds the supply. This Evergreen variety grows from 8 to 10 feet high, stands up well and is free from crooked brush. The fibre is long and fine and does not turn red. It is strictly a green variety. Sow 8 to 10 pounds per acre, in drills 3 feet apart, thin out to 3 inches in the rows. Lb., 17c.; 10 lbs., \$1.20; per bu. (46 lbs.), \$4.14; 100 lbs., \$9.00.

One-Hundred Day Bristol, or White Cap Yellow Dent.—This is one of the most prolific varieties of dent corn grown. Said to give better results on poor thin or sandy soil than any other kind. The corn is yellow with a white tip or "cap" to each kernel, so that the ear looks white on the outside, but when shelled is light yellow and very handsome. The ears are of good length (about 10 inches), with twelve rows, and filled out to the tips.

1 qt., 20c.; 1 pk. (14 lbs.), \$1.15; bu. (56 lbs.), \$4.25.

Lancaster County Sure Crop

Orange Dent.—This exceptionally early Yellow Dent Corn produces good size stalks averaging 7 to 10 feet in height, with large size ears, 8 to 10 inches long, having an average of 16 rows of kernels. The kernels are of a beautiful orange yellow shade, unlike any other Yellow Corn. A very heavy Corn and a wonderful sheller, maturing in 80 to 85 days.

1 qt., 20c.; 1 pk. (14 lbs.), \$1.15; bu. (56 lbs.), \$4.25.

SIMON'S PERFECTION ASTERS

The most popular of all annual flowers and easy of culture, being invaluable for garden decoration and for cutting. The varieties listed represent the finest Asters of the early, mid-season and late types, and will give a profusion of bloom from July to late October. Asters require good rich soil and during the growing period should be well supplied with water. Wood ashes or slacked lime worked into the soil before planting will prevent stem and root disease to which Asters are liable.

CHOICE SELECTED CANNAS

Cannas do well in almost any kind of soil, but they will repay liberal treatment. For the best results they should be planted in good loam that has been well mixed with an abundant supply of well-rotted stable or other manure. The beds should be spaded 2 feet deep or more, and the soil well pulverized. Water should be applied abundantly at all times, but good drainage is essential.

Cannas are most effective when planted in masses, either alone or in combination with Salvia (Scarlet Sage) and bordered with Coleus or other dwarf-growing bedding plants. They are also frequently used with some of the tall-growing ornamental grasses, with which striking combinations can often be secured. They do best in sunny situations, and should be set out about 2 feet each way.

The varieties we offer of Tall and Dwarf large flowering French Cannas are in dormant roots only. Six Cannas of a variety at dozen rates; 25 of a variety at 100 rates.

Add 10c. per dozen if wanted by mail. If by express, at purchaser's expense.

THE "OUT-U-KUM" WEED PULLER

An Entirely New Principle

A slight Push and Pull thoroughly loosens the surrounding soil and removes not only the weed, but the entire root.

When pushed into the ground, the two points guide the BRIDGE down alongside the weed, loosening the soil from that side. It then crosses under the root disengaging the latter. As the tool is withdrawn the BRIDGE slips up the opposite side of the weed, loosening the ground from that side and engages the head of the weed above the ground. The now thoroughly loosened weed is readily withdrawn in its entirety with little or no clinging soil.
