NEW RED-LEAVED JAPANESE BARBERRY AT LOWEST PRICES EVER OFFERED

It is only once in a lifetime that a really worth while, outstanding novelty in hardy shrubs is introduced, and in this new Barberry we have such a plant.

It is similar in all respects to the green-leaved Japanese Barberry which is so popular for mixing in the shrubbery border, as single specimens, or for planting in clumps on the lawn, as well as for foundation plantings and for hedges, but the foliage of this new variety is of a rich, lustrous, bronzy red, similar to the richest red-leaved Japanese Maples. However, unlike these and other colored shrubs in which the coloring fades or disappears entirely as the season advances, this new Barberry becomes more brilliant and gorgeous throughout the summer, and in the fall its foliage changes to vivid scarlet, and red shades, more brilliant and more effective than in the ordinary Japanese Barberry. In this coloring it is unequalled by any other shrub and is followed by the same brilliant scarlet berries common to the type, which remain on the plant the entire winter.

All that is required to develop its brilliant coloring at all seasons is that it be planted in full exposure of the sun. Plant 1 foot apart for hedges. Price: 8 to 12-inch plants, 15c each; 25 for \$3.00; 50 for \$5.00; 100 for \$9.00; prepaid. 12 to 15-inch plants, 30c each; 4 for \$1.00; prepaid. 15 to 18-inch plants, 40c each; 3 for \$1.00; prepaid.

Best Hardy Shrubs

A walk with nature in her undisturbed retreats will soon reveal to her student and lover that she has been most lavish with certain species of shrubs in the various localities. These varieties are frequently good to be used when beautifying the home surroundings, but aside from these, many other varieties are always needed to add variety and many times to aid in making up the succession of bloom. In many ways nature may be followed. It has been noted among other things that isolated specimens are seldom if ever to be found. Here we learn to plant in masses of groups for best results. Do not delay another season in planting at least some shrubs, for they add materially to the beauty and attractiveness of any home or public place. CLIMBING ROSES

2-YEAR-OLD—FIELD GROWN

So many uses can be found for Climbing Roses that we have selected the best varieties and listed them below. A Rose hedge or fence may be wanted, or a variety to use on a trellis, for roadside planting or in banks. We will make specially attractive prices on these varieties in 1000 lots for roadside planting.

CLIMBING ORLEANS—Bright red with light center; blooms in gigantic clusters on vigorous canes. Practically ever-blooming.

CRIMSON RAMBLER—Will attain a height of 10 to 20 feet in a season; produces a marvelous profusion of rich and glowing crimson clusters during June and July. It is the supreme novelty among climbers and the forerunner of the splendid array of "Ramblers" now embraced in this class.

CLIMBING AMERICAN BEAUTY—The famous American Beauty Rose in climbing form. Has all the characteristics of its relative, including form and fragrance. Healthy foliage and has strong climbing habit of growth; the abundant bloom being in prime before the June show of the bush type. The demand for this type has increased so rapidly it is hard to keep up its propagation.

DOCTOR VAN FLEET—One of the newest type of climbers and very hardy. Flowers when open run four inches or more in diameter in which it compares with the Tea class. Center built high, petals undulated and cupped. Color is a remarkably delicate shade of flesh-pink. Admirable cutting variety with stems 12 to 18 inches long.

DOROTHY PERKINS—A most beautiful shell pink. The flowers are borne in large clusters of small double bloom and very sweet scented. Foliage smoother and darker than the Crimson Rambler. This is undoubtedly the thriftiest, showiest and most practical of the older pink ramblers and trails its ribbons over more verandas, windows and trellises than any other variety.

EXCELSA

A sensational new hardy climbing Rose, sometimes called "Red Dorothy Perkins." Best described as an improved Crimson Rambler with heavy glossy, varnish-like foliage, without any of the defects of the Crimson Rambler, which is very unsightly at times because of mildew on the foliage. This great new Rose is nearly evergreen and is absolutely hardy. The flowers are very double, produced in immense trusses of thirty to forty flowers to each truss. Color intense crimson—new and distinct. One of the great hardy climbing Roses. Hardy as an oak. Lasts a lifetime. A gorgeous sight when in bloom.

FLOWER OF FAIRFIELD (The New Ever-blooming Scarlet Rambler)—Flower of Fairfield commences flowering in the spring or early summer and produces repeatedly crops of bloom until late in the autumn. It blooms very profusely on young wood the first year after planting. Very effective for covering walls, trellises or arches, and is equally attractive for table decoration or other uses as cut flowers.

GARDENIA—Bright yellow, cream color when open; very fragrant and free; early flowering. This is the hardy Marechal Niel; double yellow flowering.

MARY WALLACE

A GREAT BREEDER'S LEGACY

This is Dr. Van Fleet's masterpiece. The trade is slow in taking hold of this charming pillar rose. Hardy as far north as Central Ohio. Blooms two or three times during the summer months. A pillar rose supporting itself in a bushy growth 6 to 8 feet high. Bright clear rose-pink with salmon at base of petals. The largest Hybrid Wichuraiana in existence.

PAUL'S SCARLET CLIMBER—A wonderful Rose for trellis or pergola. Winner of Gold Medal as best new climbing rose at National Rose Society's Exhibition. Flowers are scarlet, shaded crimson. Corresponds to the Climbing American Beauty and Dr. Van Fleet as to size, shape and habit. Blooms very long, holding flower after many June bloomers have dropped their petals.

YELLOW RAMBLER—Flowers deep golden yellow. Very fragrant.

The flowers are borne on the previous season's growth and appear very early in the spring, before the foliage. Later in the season it throws up many new branches (next season's flowering wood) and these branches are of a beautiful deep red color, which makes the shrub a garden attraction almost throughout the growing season. Strong field-grown plants, each 75c; 3 for \$2.00. Prepaid

SHADE AND ORNAMENTAL TREES

Trees, with their great height, symmetry and graceful habits, are the keynote of the general landscape. Who would be without their shady comfort in the summer time, or fail to feel the deep thrill of opening buds in the spring and the first flutter of the green leaves? Much of the loveliness and charm of autumn would be gone without the gay red and yellow foliage of the shade trees.

PLUMS

Plum trees are often called the poor man's tree because they require so little room to grow and are always such prolific bearers. The market's demand for high-grade Plums is almost unlimited, and for dessert, cooking and canning, no fruit is more delicious.

Use Plum trees to fill the places on your farm where other fruit trees will not have room to grow. Plant a commercial orchard of Plums; give it good attention and it will bring you large profits and prove a good investment. Fruit prices this year are very high—and a very small acreage of bearing trees.

PEARS

Our Pear trees are of the finest quality for transplanting, for they are well developed, stocky trees. In the course of five years, they will be bearing a fine crop of fruit.

We have both standard and dwarf varieties. For the permanent orchard we recommend the standard varieties, the dwarf being better for small lot.

MAKE MONEY BY GROWING YOUNGBERRIES

The Youngberry has achieved the greatest success ever scored by any of the berry family. It not only bears very heavily, but the fruit is easy to handle, is very attractive, ships well, keeps well, cans well, and has so many commercial possibilities, and fits in so well in the home garden, that everybody should be interested in having a few vines or a commercial planting.

QUALITY COUNTS AND MAKES THEM SELL

Youngberries are universally liked and easily grown. They are among our largest berries of dark wine color, have a minimum of seeds, are highly flavored, and yield a rich looking, cherry colored juice. In the home garden you will find that more fruit will be produced from a few Youngberry bushes than most any other that will grow in the same amount of space.

Youngberries thrive where any other bush fruit grow but do best in states the same latitude as Ohio and South.

20,000 BASKETS TO THE ACRE

The Youngberry has been tested and for three seasons the yield has been measured at 20,000 boxes per acre.

On account of the size of the berries much labor cost is saved in picking. And any home garden grower will find that more fruit will be produced from a few Youngberry bushes than most anything else that will grow in the same amount of space.
