VARICK'S

RELIABLE SEEDS

BUSH BEANS

Stringless Green Podded (Burpee's) Beans

CULTURE—About the first of May select a sunny, deep, rich soil, and dig up into light; make drill two inches deep, and sow seeds in rows four feet apart; deep the beans three inches, and water the drills, and cover no more than two inches deep. The seed will grow, and then to keep down the weeds. Sow every two weeks for a continuous crop.

BUSH BEANS

Two pounds will plant about 100 feet of drill

Copenhagen Market	10c	35c	\$1.00	\$3.00
Glory of Enkhuizen	10c	35c	\$1.00	\$3.00

CULTURE.—The beet thrives best in deep, rich, dry land soil. Sow in drills about 15 in. apart and 1 in. deep. Make the soil firm over the seed. For early use, sow as soon as the ground can be worked, for fall use, in May; for winter, from the 20th of June to the middle of July, according to the variety. Thin plants to 4 or 5 in. apart. Give frequent shallow cultivation.

CARROT

An ounce will sow
about 100 feet of drill;
3 lbs. to the acre.

Danvers Half Long Carrot

Chantenay	10c	15c	35c	\$1.10
Hutchinson	10c	15c	35c	\$1.10

CAULIFLOWER

An ounce will produce about 2,000 plants

CULTURE.—In general, the Cauliflower requires about the same treatment as the cabbage; moist land is, however, more essential; and heavier manuring and more frequent cultivation aid to a greater extent the full development of the plant. In this climate the plant heads well only in the cool fall months. Seed should therefore be sown as for late cabbage, from the middle of May to middle of June, the late varieties, however, requiring a little more time than most late cabbage.

	Pkt.	¼ Oz.	Oz.
Henderson's Early Snowball	10c	60c	\$2.00

CELERY

One ounce of seed will produce about 3,000 plants

CULTURE.—Sow the seed in a light, rich, dry border as early as the ground can be worked, in drills, eight to ten inches apart and cover the seeds about a quarter of an inch deep, rolling or treading them in if the ground be dry. The beds should be kept well weeded, and an occasional soaking with water in dry weather will do the plant good. The plants may be set in a single row in a narrow trench, or the trench may be made into a bed wide enough to hold two, three or four rows, and in this case the plants are in a compact form to be covered for the winter where they grow. The beds should be made very rich with

Giant Pascal Celery

thoroughly decomposed manure. The plants will need to be earthed up two or three times.

	Pkt.	½ Oz.	Oz.	¼ Lb.
White Plume	10c	18c	30c	85c

ONION

One ounce will sow 100 feet of drill; 5 or 6 pounds per acre

Yellow Globe Danvers Onion

CULTURE.—For sets, sow the seed as early as possible in the Spring, using drills in drills. As soon as the tops die off in summer, remove them, and in the fall, and early in the following Spring replant by sowing the seed in shallow drills twelve inches apart and about four inches deep in the drills. The onions obtained by this process are of a size one inch in diameter. They may also be grown to full size by sowing the seed in rows by sowing thinly in drills one foot apart, and growing them until they are in March or early in April, in strong land, well manured, and then pulling them out to stand three or four inches apart in the drills. They delight in a strong, rich, deep, loamy soil, and will grow in successive years on the same ground. By sowing the seed in rows in February or March and transplanting in April, onions of various sizes can be obtained. For this purpose the various varieties of onions (Globe white, yellow or red) and Prizetaker are specially adapted.

	Pkt.	Oz.	¼ Lb.	Lb.

ONION SETS

CULTURE.—Onion sets should be planted near the surface as early as possible, and in drills about twelve inches apart and four inches deep in the drills. They produce a very early and profitable crop, and are of a size of 1½ inch. Add 50 cents per quart if sent by mail, to cover cost of packing charges.

Shallot	50c	\$1.10	\$2.00

PARSLEY

One ounce to 100 feet of drill

CULTURE.—Parsley seed germinates very slowly, taking two to three weeks to come up. Hence it is sown early, the seed should be sown in the spring. Make the rows 12 or 14 inches apart. Thin to 3 or 4 inches apart, or transplant at this distance, and be sown in drills in February, or later in the spring, and. Late in autumn, place about 15 plants over each of the plants to toughen out the season of winter. For ornamental purposes, nothing equals parsley; it is also used in salads, soups, etc. A good soil is suitable for growing this plant.

Champion Moss Curled Parsley

	Pkt.	Oz.	¼ Lb.	Lb.
Champion Moss Curled	10c	15c	40c	\$1.00
Plain Leaf	10c	15c	40c	\$1.00

PARSNIP

One ounce to 150 feet of drill

CULTURE.—Sow thick in April in rows eighteen inches apart and one inch deep, in rich, deep soil, well manured the previous fall, or with fine manure early in March. When the plants are two or three inches high, thin out to five or six inches apart in the rows. Unlike carrots, they are improved by frost, and it is usual to take up in the fall a sufficient quantity for winter use, leaving the rest in the ground until spring to be dug up as required.

HOLLOW CROWN

One of the best grown for the table or stock.

GARDEN PEAS

Two pounds will plant about 100 feet of drill; 112 to 170 pounds to the acre

Sutton's Excelsior

CULTURE—Though light, warm soil is desirable for the early varieties, they will, generally, succeed in any soil that will grow a good early wheat. The early season of these very hard and round seed pods is not so early as some of the green and round seed pods mentioned in this list. The early season of these hard and round seed pods is not so early as some of the green and round seed pods mentioned in this list. The early season of these hard and round seed pods is not so early as some of the green and round seed pods mentioned in this list.

RADISH

An ounce will sow 100 feet of drill

Early Scarlet Globe Radish

CULTURE—Sow as soon as the ground is dry in the spring, in rows 8 to 12 inches apart, every row 4 to 5 days before planting in the middle of May. This will give the seed a head start in the soil. A spot can be found where the ground is shaded during part of the day. They should be sown in light, rich soil as early as March. Radishes are produced in many colors. See the list for the full list of colors and uses. See, also, the list for the full list of colors and uses. See, also, the list for the full list of colors and uses. SQUASH

An ounce of small seeded varieties will plant 30 to 40 hills; of the larger seeded varieties, 12 to 15 hills

Improved Green Hubbard Squash

CULTURE—The Squash is very tender and should not be planted until all danger of frost and cold nights are passed. It thrives best in enriched soil, but can hardly be made too rich; manure should be worked up into the soil over the entire area, and hills should have a liberal quantity of this which is well rotted. To avoid borers, it is more or less the custom to plant as late as possible and is often done as late as the middle of June. In such case, an application of commercial fertilizer is often made to hasten the first growth. The early bush varieties are generally planted in hills about 5 feet apart and the running varieties about 10. Thin to three plants to the hill.

TURNIP

One ounce to 150 feet of drill; one pound to the acre

Purple Top Strap Leaf

CULTURE—For early use sow as soon as the ground opens in the spring in drills from twelve to fifteen inches apart; thin out to six or eight inches in the rows. For a succession, continue to sow every two weeks until June; for a fall and winter crop sow in July and August. The Ruta Bagas are grown for feeding stock, and are also excellent for the table. Take up the roots in November or before severe frosts; cut off the tops within an inch of the crown, store in a cool cellar or pit, or pile up in a conical form out of doors in dry ground; cover carefully with long straw and finish by earthing up, covering them with about twelve or fifteen inches of earth, leaving a trench around the heap to carry off the water. Put away in this manner they will be found in good condition in the spring.

	Pkt.	Oz.	¼ Lb.	Lb.

ASPARAGUS ROOTS

CULTURE—The quickest and easiest way to secure an asparagus bed is to plant two-year-old roots, and thus secure a good producing bed from one to two years before one can be had from seeds.

CONOVER'S COLOSSAL—Two-year-old roots, per 100	\$2.00
PALMETTO—Two-year-old roots, per 100	\$2.00

MISCELLANEOUS GARDEN SEEDS

BRUSSEL SPROUTS

CULTURE—Species of the cabbage family. It produces along the whole length of the stem small sprouts resembling miniature cabbages. The heads are a great delicacy boiled in the same way as cauliflower. Seeds should be sown about the middle of May in a seed bed and the plants afterwards set out in rows two feet apart and cultivated like cabbage. Being small and hard, the sprouts are not in the least affected by frost.

	Pkt.	Oz.	¼ Lb.
Long Island, Improved	10c	25c	75c

CRESS OR PEPPERGRASS

CULTURE—Sow thickly in shallow drills, early in spring and at intervals throughout the season, for a succession, as it soon runs to seed. Watercress requires a stream of running water, ditch or pond, in which it will grow without care, except at first keeping the weeds from interfering with it.

	Pkt.	Oz.	¼ Lb.
Extra Curled	10c	15c	35c
True Watercress	10c	50c	\$1.50

DANDELION

One ounce will sow about 100 feet of drill

CULTURE—Sow in May in drills ten inches apart, thin out to 4 inches apart. Cultivate during the summer and in the following spring the plants will be fit for use.

	Pkt.	Oz.	1/4 Lb.	1 Lb.
Improved Thick Leaved	5c	85c	\$2.50

SWEET, MEDICINAL AND POT HERBS

ANISE (*Pimpinella anisum*). Hardy annual, used for garnishing and seasoning.

Used as a drink for the sick and for culinary purposes.

BASIL, SWEET (*Ocimum basilicum*). Seeds sown in April, indoors, in rich, light soil, and in beds in June.

BORAGE (*Borago officinalis*). Used for flavoring, and flowers furnish bee pasture.

CARAWAY (*Carum carui*). Grown for the seeds, which are used in flavoring.

CATNIP, or CATMINT (*Nepeta cataria*). Used for medicinal purposes.

CORIANDER (*Coriandrum sativum*). Young leaves used in soups and salads. Seeds in confectionery, and for flavoring.

DILL (*Anethum gracile*). Leaves used for flavoring.

FENNEL, SWEET (*Anethum foeniculum*). Leaves used in fish sauces and for garnishing.

LAVENDER (*Lavandula vera*). Flower spikes are dried for their peculiar lasting fragrance.

MARJORAM, SWEET (*Origanum marjorana*). Hardy perennial, cultivated for use of its leaves for flavoring.

ROSEMARY (*Rosmarinus officinalis*). Foliage used for medicinal purposes.

SAGE (*Salvia officinalis*). Used for seasoning.

THYME (*Thymus vulgaris*). Leaves and tops are used for culinary purposes.

LARGER CROPS IN FIELD AND GARDEN IF YOU USE

"NITRAGIN"

100% Nitrogen, ammonia, carbon, iron, boron, calcium, phosphorus, and other legumes should always be inoculated with Nitragin. The lack of necessary bacteria in the soil is often the cause of a poor legume crop—a weak start—or a total failure.

GRASS SEEDS AND CLOVERS, GRAIN, RYE, WHEAT, ETC., at the Lowest Market Rates, and of the Best Quality. FERTILIZERS for the Home Garden and Lawn

SWIFT'S LOWELL 3-8-4 ANIMAL BRAND FERTILIZER

For Corn, Grain, Grass and Vegetables
Guaranteed Analysis

Ammonia	2 1/2 to 3 1/2 per cent
Nitrogen	2.95 to 2.87 per cent
Total Phosphoric Acid	11 to 12 per cent
Available Phosphoric Acid	10 to 11 per cent
Potash	2 to 3 per cent

This is a popular brand at moderate cost, and is used not only for Corn and Grain, but for Potatoes and Grass, and is an excellent fertilizer for Cranberries and all crops. It gives an early and vigorous start, promoting steady growth to maturity. It contains more Ammonia and available Phosphoric Acid than ever before, which in large measure takes the place of potash and is a most reliable and economical brand to use.

100-Lb. Bags, per 100 Lbs.	\$2.25
25 to 50 Lbs., per Lb.	.03
Less than 25 Lbs., per Lb.	.05
Price per Ton	34.50

PULVERIZED SHEEP MANURE

The best of all manures for Home Lawns and Gardens, House Plants, Window Boxes, Golf and Country Club Greens and Fairways, Shrubbery, Trees, Vines, Fruits, Berries, Melons, all Vegetable Crops, under glass or in the field. Effectively sterilized, weed seed killed. Supplies the humus, bacterial action and plant food that makes everything grow. A convenient Wagon Load of Manure in a Bag.

100-Lb. Bags, per 100 Lbs.	\$2.50
50-Lb. Bags	1.50
25-Lb. Bags	.90
Less Than 25 Lbs., per Lb.	.05
Price per Ton	42.00

CANADIAN UNLEACHED HARDWOOD ASHES

Acts as Both Insecticide and Fertilizer. Especially recommended for grass (top dressing 1 ton to acre), also all crops but potatoes, especially onions and garden truck. Spread after ploughing and harrowing, 2 tons to acre.

100-Lb. Bags, per Bag	\$1.55
25 to 50 Lbs., per Lb.	.02 1/2
Less than 25 Lbs., per Lb.	.03
Price per Ton	25.00

SWIFT'S LOWELL 7-6-5 MARKET GARDEN SPECIAL GRASS AND LAWN DRESSING

Guaranteed Analysis

Ammonia	6 to 7 per cent
Nitrogen	4.92 to 5.74 per cent
Total Phosphoric Acid	9 to 10 per cent
Available Phosphoric Acid	8 to 9 per cent
Potash	2 to 3 per cent

A most concentrated and powerful fertilizer. It is economical, too, because it is not necessary to apply so much per acre as of lower grades.

For Asparagus, Celery, Lettuce, Spinach, Squash and all Vine Crops it is excellent. Fields that need top dressing or reseeding in the spring should receive an application of this quick acting and reliable fertilizer. With sufficient moisture, it will double the crop over the yield where no manure or fertilizer has been used. It is strongly recommended for Lawns, Flowers, Trees, Shrubbery and Vegetables. In short, it is our best foliage and garden fertilizer.

100-Lb. Bags, per 100 Lbs.	\$3.00
25 to 50 Lbs., per Lb.	.04
Less Than 25 Lbs., per Lb.	.05
Price Per Ton	46.95

5-Lb. Package	.60
12-Oz. Package	.10

POWNAI LAND LIME

Put up in Paper Bags

Price per Ton, \$9.50	100 Lbs., 55c
-----------------------	---------------

SWIFT'S LOWELL 4-8-4 POTATO MANURE

Guaranteed Analysis

Ammonia	3 to 4 per cent
Nitrogen	2.46 to 3.28 per cent
Total Phosphoric Acid	11 to 12 per cent
Available Phosphoric Acid	10 to 11 per cent
Potash	3 to 4 per cent

This is a fertilizer made for Potatoes and Vegetables, at moderate cost, to be used with or without barnyard manure, although it may be profitably used alone. It contains higher percentages of Ammonia and Phosphoric Acid than in previous years.

100-Lb. Bags, per 100 Lbs.	\$2.50
25 to 50 Lbs., per Lb.	.03 1/2
Less Than 25 Lbs., per Lb.	.05
Price per Ton	37.75

The best of all manures for Home Lawns

PURE GROUND BONE

Four to 5 per cent ammonia, 21 to 23 per cent phosphoric acid. A valuable fertilizer, especially for lawns, vines and fruit trees.

100-Lb. Bags, per 100 Lbs.	\$3.50
25 to 50 Lbs., per Lb.	.04 1/2
Less Than 25 Lbs., per Lb.	.05 1/2
Price per Ton	52.00

EDIBLE BONE MEAL

For lawns use 3 to 5 lbs. per 100 sq. feet. For roses, small fruit bushes and shrubs, use two handfuls around each plant and spade or hoe it in. For garden crops, use at the rate of 2 or 3 lbs. per 100 square feet (10 ft. square). Rake it in.

100-Lb. Bags, per 100 Lbs.	\$4.35
25 to 50 Lbs., per Lb.	.05
Less Than 25 Lbs., per Lb.	.06
Price per Ton	80.00

CHEMICALS

	100 Lbs.	25 Lbs.	Lbs.
Tankage	\$4.25	\$0.05	\$0.06
Acid Phosphate	1.50	.02	.03
Sulphate of Ammonia	4.25	.05	.07
Muriate of Potash	3.75	.05	.07
Nitrate of Soda	4.00	.05	.07

LAND PLASTER

Excellent for composting and fertilizing; it is also used for preventing bugs from destroying Cucumber, Melon and Squash vines.

Price per Ton, \$16.00	100 Lbs., \$1.00

VARICK'S LAWN GRASS SEED

VARICK'S LAWN GRASS SEED is composed exclusively of the best cleaned seeds of the choicest fine-bladed grasses, to which is added a suitable quantity of white clover, but not too much. This heavy, cleaned seed, free from chaff, is much stronger in vitality than usual grades. A given measured quantity will produce three to four times as many grass plants, besides making a stronger and quicker growth.

In cartons containing 7 oz. Lawn Grass Seed	22 cents
In cartons containing 14 oz. Lawn Grass Seed	42 cents

A large carton will sow about 250 square feet; a pound about 300 square feet.

Per pound	40 cents
10 to 20 pound quantities (per pound)	37 cents
20 pounds and over (per pound)	35 cents

"SHADY NOOK" LAWN GRASS SEED

Many of our customers, having fine shade trees on their lawns or shaded corners receiving but little sunlight, have written regarding the difficulty of securing a good growth of grass under the trees or in other heavily shaded locations. As this mixture is composed entirely of choice, clean seed of the finest and most costly grasses, it cannot be sold at so moderate a price as our regular lawn mixture. It is all clean, heavy seed, free from chaff, and will give the best results with a minimum quantity of seed. PER POUND, 45c.
