Executive Summary
FWP Neotropical Bird Survey
1998 Field Season

I. INTRODUCTION

The scope of work for the second year (1998) of the two year study was basically the same as for field work in 1997. Our guidelines for this work read:

"establish multiple concurrent point-count transects in northern plains grassland habitats of eastern Montana to obtain data on species composition, habitat association, and distribution of neotropical and resident birds...Data collected by the contractor will be used to assess the status of neotropical and resident bird species and identify habitat variables that affect populations. Grassland habitats to be sampled are in northeastern and north central Montana. Shrub-grass habitats to be sampled are in eastern and central Montana."

The study was designed to run for two years, with grassland habitats inventoried in 1997 and shrub-grassland habitats in 1998. Tasks would include surveying all transects in a uniform and systematic manner, following protocol outlined in Hutto's USFS Songbird Monitoring Program Training Manual (1994/1996) and using standard point-count methodology (Hutto et al. 1986).

Transect locations were selected during spring, 1998 and were intended to be straight-line transects with ten point-count locations at 300-meter intervals. The Hutto methodology used in 1997 suggested recording all birds detected (visually or by song) within a 25-meter radius during a ten-minute period, but field work in 1997 indicated that 100-meter transects would be much more appropriate.

Forms for the bird surveys were redesigned by OEA Research following the field season in 1997, and included several fields of information not on the 1997 forms. These forms also eliminated some vegetation information from the 1997 forms that proved to be less than valuable (Figures 1 and 2).

Each plot was to be surveyed four times: during the periods of May 15-31, June 1-15, June 16-30, and July 1-15.

II. FIELD WORK

A. Methods and Field Forms

Point-count transect locations were selected during early spring of 1998 by OEA Research personnel. The basic premise for site selection was to ensure that transects occurred in a relatively uniform shrub-grassland community. Ten transects were selected in each of three general areas of southern Montana; southwest, south-central, and southeast. These transects were to run through relatively uniform habitat (locations for straight lines on compass azimuths in uniform habitat are

very difficult to find) for 3000 meters with 10 survey points at 300-meter intervals. Ten minutes were allotted for each survey point and all birds seen or heard in a 100-meter radius from the point were recorded on the form.

The 1998 Bird Data field form differed from the form used in 1997 in that there was a place to record whether or not a bird "belonged" to a point and whether it was attracted to the point. A discussion of the reasoning behind these additions is included in the 1997 report.

Vegetation data recorded on the front of the form were habitat code and name, predominant grass species, shrub species and percent cover.

The Point Count Characterization form was for recording general transect point information such as topography, edaphic features, soil disturbance, grasses and shrubs in order of dominance and percent cover, land use, residual vegetation and other information on grasses, shrubs, trees, moss and bare ground. This form also included a place to sketch a general picture of the 100-meter radius circle of each point.

B. Problems and Solutions

The field forms developed for the shrub-grassland portion of this study worked well and caused no problems like the ones encountered with the 1997 forms used at grassland points.

C. Transect Locations

Consultation with FWP during late 1997 and early 1998 provided information on general areas to be surveyed in 1998. Survey areas in southwest Montana were located in Beaverhead County. South-central survey areas were located in Gallatin, Golden Valley, Musselshell, Petroleum and Stillwater counties. In southeast Montana, survey sites were located in Rosebud, Custer, and Powder River counties. Figure 3 lists 1998 transect locations.

III. RESULTS

During the spring and summer (15 May-15 July) of 1998, we performed 1180 ten-minute point counts at 300 points. These points were located on 30 three-km transects stratified by geographic area within Montana; 10 transects in southeast Montana, 10 transects in south-central Montana, and 10 transects in southwest Montana. We visited each transect four times over the season with the exceptions of two transects north of Melstone which were "weathered-out" on one visit.

Within 100 m of point centers we observed a total of 75 species during 1180 point counts. Sixty-three individuals and ten species were observed at distances greater than 100 m from the observer, or based on behavioral cues were deemed to be dissociated with the habitat and site.

Hence, we dropped these birds from analyses. The majority of species were observed in both low numbers and at low proportions of the total number of point counts and transects. For example, 87% of species were observed on less than 10% of the point count sites (Table 1 & Figure 4 - *Species Frequency of Occurrence*). Unsurprisingly, the most frequently encountered birds were Vesper Sparrows, Brewer's Sparrows, Western Meadowlarks, Horned Larks, Lark Buntings, Brown-headed Cowbirds, and Sage Thrashers.

The most abundant species followed a similar pattern to the frequency of occurrence with Brewer's Sparrows, Western Meadowlarks, Vesper Sparrows, Lark Buntings, and Horned Larks showing mean relative abundance greater than 1 bird per point (Table 2 & Figure 5 - *Species Means and SDs*).

Without surprise, this suite of most abundant species also showed the lowest variability in occurrence as measured by coefficients of variation. Horned Larks, Brown-headed Cowbirds, Western Meadowlarks, Brewer's Blackbirds, Vesper Sparrows, Savannah Sparrows, Grasshopper Sparrows, Lark Sparrows, Brewer's Sparrows, Lark Buntings, and Sage Thrashers all showed coefficients of variation of less than 5.0. These species, therefore, could be looked upon as the least variable and most equably encountered species within and among point count locations. Coefficients of variation for other species ranged from greater than 5 to over 23. Note that the majority (93%) of species were observed in low numbers (< 0.5 birds/point).

From one to sixteen species were observed at each of the 300 point count locations with a mode of four species (Figure 6 - *Number of Species Observed at Point Counts*). Interestingly, the ten transects located in southcentral Montana exhibited significantly greater species richness than transects in the southwest and southeast portions of Montana (Figure 7 - *Species Richness Observed by Transect*). Habitat, weather, phenology, diurnal timing, as well as observer may all contribute to this noted trend.

As in 1997, there lies a strong geographical component in the passerine occurrence and abundance data we collected (Table 3). Further analysis, whether habitat, trend, or pure numerical should incorporate location within statistical models. To exemplify this perspective, let's look at several illustrative species. The majority of Long-billed Curlews (71%), Horned Larks (60%), McCown's Longspurs (87%), Rock Wrens (78%), and Sage Thrashers (83%) were observed in southwest Montana. One of the most common species overall, Western Meadowlarks, were rarely observed in southwest Montana.

On the other hand, central Montana points contained the majority of the Eastern Kingbirds (58%), Brown-headed Cowbirds (98%), Brewer's Blackbirds (52%), Savannah Sparrows (81%), and Brewer's Sparrows (56%). Western Meadowlarks were observed most in southeast Montana (53%) as were Lark Buntings (53%) and Grasshopper Sparrows (99%). Southeast Montana sites

contributed the only Field Sparrows, whereas, southwest Montana yielded the only, but very notable, Sage Sparrows. Sage Sparrows were observed on three transects (9822, 9829, and 9830) and breeding behavior was noted. Vesper Sparrows were relatively equitably distributed across the southern tier of the state.

The 300 point count locations were situated within 30 cover classes totaling 324 cover class occurrences (Table 4 - Hutto *et al.* 1998). The majority (76.5%) of the occurrences were in grazed vegetative communities. Big sagebrush communities contributed 227 (70%) of the occurrences, whereas, greasewood communities contributed 51 (15.7%) of the total occurrences. The remainder of the vegetative communities were split between silver sagebrush, grass-dominated communities, low sagebrush, and wooded areas.

Table 5 is a summary of frequency of occurrence for bird species by transect and Table 6 is a summary of species abundance by point.

IV. DISCUSSION

As the scope of work for this project stated, our job was to "assess the status of neotropical and resident bird species and identify habitat variables that affect populations." Toward this end, we have surveyed birds at 450 individual points during two field seasons. We found some interesting information, saw some birds we expected to see and some we were excited to see.

While conducting these surveys and reviewing our data, we realized that we were seeing only the tip of the iceberg with our 450 points. Grassland and shrub-grassland habitats cover most of Montana and are the least well known by bird researchers. Land use management decisions are being made daily that can affect birds on enormous chunks of state, federal and privately owned land. Surveying this sea of habitat is an equally enormous task, but it is one that we have begun and one that should continue while there is momentum. Perhaps the greatest goal achieved by these two years and 450 points of inventory was to put the wheels in motion to continue surveys in Montana's grassland and shrub-grassland habitats.

Table 4. Cover classes contained within 300 point count locations; 1998

Description	Cover-type	Grazing Status	Total
Kentucky Bluegrass, low-structured (<15 cm ht) and medium cover (40-70%)	30917	Grazed	2
Big Sagebrush, medium-structured (.5-1.5m ht) and dense cover (>15%)	32003	Ungrazed	37
Big Sagebrush, medium-structured (.5-1.5m ht) and sparse cover (<15%)	32004	Grazed	24
Big Sagebrush, high-structured (>1.5m ht) and dense cover (>15%)	32007	Grazed	1
Big Sagebrush, medium-structured (.5-1.5m ht) and dense cover (>15%)	32009	Grazed	63
Big Sagebrush, medium-structured (.5-1.5m ht) and sparse cover (<15%)	32010	Grazed	44
Big Sagebrush, low-structured (<.5m ht) and dense cover (>15%)	32011	Grazed	29
Big Sagebrush, low-structured (<.5m ht) and sparse cover (<15%)	32012	Grazed	29
Low Sagebrush, medium-structured (.5-1.5m ht) and dense cover (>15%)	32112	Ungrazed	20
Silver Sagebrush, medium-structured (.5-1.5m ht) and dense cover (>15%)	32203	Ungrazed	2
Silver Sagebrush, medium-structured (.5-1.5m ht) and sparse cover (<15%)	32204	Grazed	3
Silver Sagebrush, high-structured (>1.5m ht) and dense cover (>15%)	32207	Grazed	3
Silver Sagebrush, high-structured (>1.5m ht) and sparse cover (<15%)	32208	Grazed	3
Silver Sagebrush, medium-structured (.5-1.5m ht) and dense cover (>15%)	32209	Grazed	2
Silver Sagebrush, medium-structured (.5-1.5m ht) and sparse cover (<15%)	32210	Grazed	3
Greasewood, medium-structured (.5-1.5m ht) and dense cover (>15%)	32303	Ungrazed	2
Greasewood, low-structured (<.5m ht) and dense cover (>15%)	32305	Ungrazed	6
Greasewood, low-structured (<.5m ht) and sparse cover (<15%)	32306	Ungrazed	2
Greasewood, high-structured (>1.5m ht) and dense cover (>15%)	32307	Grazed	6
Greasewood, high-structured (>1.5m ht) and sparse cover (<15%)	32308	Grazed	1
Greasewood, medium-structured (.5-1.5m ht) and dense cover (>15%)	32309	Grazed	9
Greasewood, medium-structured (.5-1.5m ht) and sparse cover (<15%)	32310	Grazed	6
Greasewood, low-structured (<.5m ht) and dense cover (>15%)	32311	Grazed	6
Greasewood, low-structured (<.5m ht) and sparse cover (<15%)	32312	Grazed	13
Juniper Woodland, 'decent' shape (no evidence of well-worn cattle trails)	40102	Ungrazed	1
Ponderosa Pine, mature (multi-story, trees ~20-40 cm dbh)	40202	Undocumented	2
Mixed Conifer, mature (multi-story, trees ~20-40 cm dbh)	41502	Undocumented	2
Cottonwood Bottomland, 'decent shape' (lush understory, no visible browse line)	50401	Ungrazed	1
Streamside Riparian, 'decent shape' (lush understory, no visible browse line)	50501	Ungrazed	1
Hardwood Draw, grazed by cattle (understory, sharp browse line)	50602	Grazed	1

Table 5. Frequency of Occurrence by Transect

FREQUENCY OF OCCURRENCE BY TRANSECT

TRANSECT	SPECIES	FREQUENCY OF OCCURRENCE (%)
9801	Killdeer	6.67
9801	Mourning Dove	3.33
9801	Horned Lark	83.33
9801	Brown-Headed Cowbird	10.00
9801	Red-winged Blackbird	3.33
