Values in Canterbury Boxwood

NATURE AND OUR PERFECTED METHODS HAVE COMBINED TO PRODUCE LARGER AND BETTER PLANTS

Careful inspection shows that the plants of *Buxus suffruticosa* in the 4 to 5- and 5 to 6-inch sizes are at least an inch broader than in past years. Do you realize that this means an actual reduction of nearly 25 per cent in the number of plants required for an edging or border?

Canterbury plants are in better condition than ever before. Growing conditions have been distinctly favorable. Plenty of moisture, careful cultivation, and skilful pruning have brought both *B. suffruticosa* and *B. sempervirens* to a point that we thought almost impossible to attain. We have indeed set a new mark for quality, and can supply this quality without regard to the number of plants that you may require.

This is a year of unusual values to buyers of Canterbury Boxwood. In addition to the growth of the plants, we have bowed to the trend of the times and reduced prices on all sizes of *B. suffruticosa* and *B. sempervirens*. Because of increased size, you need fewer plants for a given space, and you get these better plants at lowered rates—a combination distinctly unusual even in these days of reductions. Wise buyers of Boxwood will not overlook these three important points.

There is another important point: Canterbury Nurseries grow Boxwood by the million. From this enormous stock, plants are selected for each order, thus insuring uniformity in height and diameter. Landscape architects, superintendents of large estates, and the leading nursery firms specify Canterbury plants because of these important facts. Orders may be placed for shipment at desired time in fall or spring.
