15123. *Pardaliparus elegans*.

♂ ad. do

April 20, 1907. 170; 307; 92; 42; 12; 26; 22.5. Iris yellow.

Bill olive-brown above, greenish yellow on sides of base of maxilla and on mandible except the tip which is plumbeous. Tarsi yellow; toes greenish yellow; claws brownish horn color. The abdominal integument was thickened and oedematous, and many of the feathers had been plucked off the belly indicating that the bird had been brooding. Shot on the highest point of the Military Reserve, at Camp John Hay.

April 20, 1907. Just from the nest. Caught in the grass under the pines.

May 3, 1907. Parent of nest and 4 eggs preserved. See note-book, p. 30 for description.

May 5, 1907. This bird flew over an Igorot turf-fence. Mr. Carpenter followed and flushed it; but it immediately dropped in the grass; and, sooner than take wing again, it allowed Mr. Carpenter to catch it by hand.

May 6, 1907. 540; 830; 234; 123; 50; 43; 58; bill from extreme base, 58; bill from nostril, 37; height of bill at base, 21.5; greatest width of bill, 23; distance from tip of bill to center of pupil, 76; tip of bill to occiput, 102; from head of tibia to end of longest claw, 188. Shot by Mr. Carpenter.
 May 6, 1907. Iris yellowish brown with a dusky inner ring. Base of bill orange-red with a yellow margin next
