Vegetable Seed Trials

Frost Proof Cabbage Plants

To My Friends and Customers:

In mailing you my 1932 catalog this season finds the general crop of Cabbage and Onion plants shorter than usual. The dry weather during the planting season has cut the Cabbage and Onion plant crop 75%. I planted more acreage than usual and have two hundred acres of the finest Cabbage and Onion plants I have ever had. By planting my early plants is the quickest way to cut down the cost of living and have some surplus money to spend. The first thing you should do this year—1932—is to get that home garden started. My plants are cheaper than the general run of plants because there are no weaklings—practically every plant makes good. I have twenty-three years experience and should know how to give you the best.

Charleston Wakefield

Cabbage Bring High Prices

You can easily raise from six to ten tons of Cabbage per acre from my fine frost-proof plants. Think of the profits—six hundred to a thousand dollars an acre quick money. I firmly believe that the man that puts out all the cabbage he can as early as possible in his locality will be the man with money in the bank when his crop matures. Think it over and act now.

Early Jersey Wakefield.—Many market gardeners consider this the very best Cabbage in cultivation. Its merits are many, among which are medium heads for an early variety, small outside foliage, and uniformity of crop. The heads are of medium size, and are white, solid and tender. This variety always brings a good price on the market on account of its earliness, thereby netting the grower large returns.

Charleston Wakefield.—This cabbage is very much like the Jersey only it has a much larger head and is about 10 days later. This is a very desirable variety for shipping purposes as the heads are very solid and firm. A strong favorite with growers for a main crop.

Succession.—The earliest of the flat head variety, a sure header, and a very hardy grower both in cold and warm weather. This variety is grown extensively in the South and gives universal satisfaction. Heads are of uniform shape, not too flat and very solid.

Large Late and Early Flat Dutch.—This variety is one of the oldest in cultivation, head very large and flat, very tender and fine-grained. My strain of these varieties are of the very best to be had.

Golden Acre.—Same price as other varieties.

C o p e n h a g e n M a r k e t.—Very fine, nearly as early as Jersey Wakefield; stem short; heads large, round and solid, with few outer leaves of an upright growth. My stock of this popular variety is very early, uniform and dependable.

Flat Dutch.

Vegetables sold early in the season bring many times the price of those marketed several weeks later. That's why Fulwood's Frost - Proof Cabbage Plants are so profitable for the gardener; they produce full-grown heads three weeks before plants which have been home-grown. I have been growing Cabbage plants for more than 23 years and because of my careful selection of seed you frequently get **TWICE AS MUCH CABBAGE PER ACRE.**

Fulwood's Frost Proof Cabbage Plants

NOW READY!

In this section the soil and climate conditions are just suited for growing tough, hardy Cabbage plants during the Winter and early Spring. The plants make a slow but steady growth, until at eight to ten weeks of age they are very tough and hardy. When in this condition they can be shipped to territory farther north and be planted in the open ground a month or six weeks sooner than the home-grown hot bed or cold frame plants. These **Frost-Proof Cabbage Plants** will stand a temperature of 20 degrees above zero without injury. The land freezing, or the plants being covered with ice, sleet or snow after they are planted will not injure them. You know what the difference in profits will be if your crop is matured and marketed before the general crop matures.

I know how to produce good plants; you'll find no runts or weaklings among those you purchase; practically every one makes good. You'll easily get from 6 to 10 tons of Cabbage for each acre you plant.

Succession.

Fulwood's Cabbage Plants

NOW READY!

How To Grow Cabbage.—To grow a good crop of cabbage I would advise selecting a deep sandy loam with a Southern exposure if possible. Apply broadcast from ten to fifteen loads of well rotted stable manure to the acre and plow in. The land should be harrowed thoroughly and rows laid off three to three and a half feet apart. Apply about 500 pounds of high grade fertilizer to the acre, and mix well with the soil. If you have no stable manure apply from ten to fifteen hundred pounds fertilizer to the acre, half broadcast and half in the drill. As Cabbage

are gross feeders bear in mind that you cannot fertilize them too heavily. The Wakefield varieties should be set out from fifteen to twenty inches apart. It is important to set the plants deep in the ground, up to the first leaf, in order to keep the stem from freezing and cracking, which will cause the plant to fall over and die. You can plant about twelve thousand plants of the Wakefields to an acre and ten thousand of the flat heads to an acre.

The first cultivation should be deep, but when they start to head cultivate them shallow and apply 200 pounds nitrate of soda per acre.

Growers in some sections of the country are selling plants, calling them frost proof plants that have never been subjected to a frost because they do not have frost in their locality. Be sure you get the genuine when you buy.

Up. Sackville, N. B. Canada, Dec. 14, 1931
P. D. Fulwood, Tifton, Ga.

Dear Sir—I have been using your Cabbage plants for four years, and am very well satisfied with them, as they come in much earlier than our home-grown plants.

Yours very truly, Geo. L. Fullerton.

Burlington, N. J., May 12, 1931.
P. D. Fulwood, Tifton, Ga.

Dear Sir—Those Tomato plants I received were A No. 1. Equal to spotted or transplanted plants. Also your frost proof Cabbage plants. I had plenty of Cabbage that weighed fourteen to seventeen pounds.

Samuel Bell.

Insure Your Crops

By Using Fulwood's High Grade Plants

Growing plants is all I do. I have been at it for t w e n t y - three years and devote my entire time to this work. I spare neither t i m e nor money to give you the very best plants

obtainable. I change my lands every year, thus keeping my plants free from disease. I have no hot-houses but grow all my plants in the open field, thus making them hardy, stocky and strong. You cannot risk planting your truck crops and garden with anything but the very best plants obtainable.

As this catalog goes to press I have over 200 acres of the finest Cabbage and Onion plants I have ever had. They are tough, frost-proof plants ready for shipment at any time wanted. My seed are treated before planting and sprayed after they come up to prevent disease. I plant on ground that has not been planted to plants before. I know there is not another plant grower in the plant business that takes the pains I do to give my customers the very best plants to be had.

My TWENTY-THREE years experience stands behind every shipment I make. Have your banker look me up in Bradstreet's.

My Guarantee.—I positively guarantee all plants grown by me to be exactly as described in this catalog, and fresh, pure, genuine and unadulterated, carefully selected and tested. I also guarantee them true to name and will replace free of charge any that may prove otherwise through possible error.

Some people when they are ready to buy plants pick up a paper and order from the cheapest ads. They are always disappointed as they are delayed in getting the plants and these cheap plants grown by people that know nothing of the plant business never give satisfaction. Send your order to a reliable grower.

Frost Proof Onion Plants

Varieties—Yellow Bermuda, Crystal Wax and Spanish Valencia.

Onion plants are much better than sets, as they make larger Onions and do not run to seed. They also keep when cured and stored. Ready October 1st, to June 1st.

Onion Plants Same Price as Cabbage Plants.

ONION PLANTS READY NOW!

Prices on Cabbage plants and Onion plants are the same and I will gladly mix an order shipping part Onion plants and part Cabbage plants if you desire.

My Onion plants are grown here on my farm and shipped you fresh, green and healthy. Do not confuse them with cheap cold storage plants shipped from Texas.

Sweet Potato Plants

My Sweet Potato Plants Are Certified
Free From Disease By Georgia
State Entomologist.

Porto Rico Sweet Potato Plants, Ready April 1st.

VARIETY:

Porto Rico.—In my opinion the Porto Rico is the very best all around Potato on the market. It is from two to three weeks earlier than any other yam. Enormous yielder and vigorous grower. Eating qualities unsurpassed, flesh red and very sweet. It is a heavy yielder and the best keeper. This is the Potato introduced into the Northern markets. Curing houses paying more for this Potato than any other variety.

Sweet Potato plants ready about the first of April. Shipments made throughout April, May, June and July. I would advise sending in orders for Potato plants as early as possible and the first orders received are the first orders filled and sometimes the supply does not meet the demand.

Packing

All plants are tied in bunches of 50, except Onion plants are tied 100 to bundle. Packed by experienced help, in the lightest crates possible. I have shipped plants successfully to all of the Southern States, Western States, and all of the Northern States and some places in Canada. Write your name, address and postoffice plainly. You will be notified by mail the day your plants are shipped.

All seed planted by me has been treated with Sem-e-san and the plants are raised on new soil which absolutely prevents the plants from having any disease of any kind. You can grow more Cabbage from my plants than any other plants on the market.

Woodlawn, Ill., February 28, 1931.

P. D. Fulwood, Tifton, Ga.

Dear Sir—I have sold and set your plants for the last ten years and always they give satisfaction.

Geo. R. Maddox.

Harper's Ferry, W. Va., March 9, 1931.

P. D. Fulwood, Tifton, Ga.

Dear Sir—Your plants did fine last year thru the worst drouth ever known. Practically every plant made a head.

J. W. Lynch.

Mammoth Springs, Ark., March 1, 1931.

P. D. Fulwood, Tifton, Ga.

Dear Sir—I like your plants fine. I had the finest Cabbage last year, though the drouth was awful. I had Cabbage when all others failed.

Mrs. Albert Bell.

Summit, Va., March 4, 1931.

P. D. Fulwood, Tifton, Ga.

Dear Sir—The plants bought from you have been fine. I have had the finest Cabbage I have ever raised. Your Onion plants cant be beat. With thanks to you from,

Mrs. E. C. White.

Harbor Spring, Mich., Nov. 6, 1931.

P. D. Fulwood, Tifton, Ga.

Dear Sir—We received some plants from you last spring. They were very fine and I might say we were first on Cabbage and Tomatoes. Beating out the hot-house growers by several weeks.

Adams & Company.

Kirkwood, N. J., May 9, 1931.

P. D. Fulwood, Tifton, Ga.

Dear Sir—The 15,000 Tomato plants shipped me May 7th reached me on the 9th. Very quick work and the plants were in wonderful condition.

Very truly, W. I. Tomlinson.

TOMATO PLANTS

READY APRIL 1st AND AFTER

Varieties:

**Greater Baltimore, Bonnie Best
and Marglobe.**

I ship more Tomato plants than any grower in the plant business, shipping millions of them to canning factories all over the country, as well as to small gardeners and truckers.

Tomato plants are not frost-proof and should not be ordered out until all danger of killing frost is past. I ship only well rooted, large, stocky plants.

My Tomato plants are open field grown and acclimated to outside temperatures. They will start growing quickly and produce ripe tomatoes much earlier than home-grown plants.

Plants are not perishable. When packed as I pack them in damp moss they will keep in good condition for several days.
