Grown on Puget Sound where the grass is green all the year round.

BULBS

Grown at...

**GREEN BRAE
GARDENS**

by...

F. S. FLICKINGER

*Richmond Beach,
Washington*

ALL bulbs offered here are grown on our place at Richmond Beach, Washington, on a gentle slope to the west and within a stone's throw of Puget Sound. Our soil and climate are particularly adapted to the growing of most bulbous subjects that do not require a tropical climate, and are bound to give you satisfaction.

We specialize on the native Pacific Coast Lilies and *Lilium Regale*. Shipment is made early in October and safe arrival is guaranteed.

As to culture, the safe rule is to plant the bulb with twice its height of soil over its top, except when naturalizing and they may then be planted deeper to permit of cultivating the top soil when required. There are two don'ts that must be observed if you expect your lily bulbs to stay with you: the first is perfect drainage, and the second is absolutely no manure except as a top dressing and then it must be well rotted.

We especially draw your attention to the fact that you can have delivery of the lilies, which are usually imported from Japan late in November or December, from 30 to 60 days earlier and will also have bulbs that are acclimated.

TERMS OF SALE

All stock is offered subject to prior sale, and no warranty expressed or implied is made as to the productiveness or any other matter in connection with bulbs or stock sold by us. Goods not accepted under these terms must be returned at once as no sale is made thereof.

We use every care in the growing and packing of all stock and guarantee safe arrival. Shipment is generally made by parcel post and we pay the postage.

Terms—Cash with order.

We also grow a large variety of other bulbous subjects, many of which are now under quarantine and will be released next fall. A number of these items are not now obtainable in this country and we would be pleased to have the names of any of your friends who are interested on our mailing list.

HARDY GARDEN LILIES

	Each	Doz.	Per 100
Auratum Platyphyllum	\$.50	\$5.00	\$35.00

The Gold-Banded Lily of Japan. This is one of the most popular lilies grown and is a native of Japan, bearing many enormous flowers with broad petals, having a gold band in the center and is spotted with brown or red.

Bolanderi (small)	.75	7.50	60.00
--------------------------------	-----	------	-------

A very good rock garden subject 1½ to 2 feet. Deep crimson, dainty bells, spotted purple, in June-July. Very rare.

Bulbiferum	.35	3.50	
-------------------------	-----	------	--

A fine lily, much like Umbellatum except that it is likely to be of smaller stature, 2 feet, and has bulbils in the axils of the leaves. Flowers yellow tinted with orange and rich red, in June.

Candidum, 6/9"	.35	3.50	25.00
-----------------------------	-----	------	-------

The oldest in cultivation; 4 to 6 feet. Many pure white, fragrant blooms in May-June. Plant not over 2" deep. **Delivery July and August.**

Columbianum, 5/7"	.30	3.00	20.00
--------------------------------	-----	------	-------

The native lily of the Northwest; 3 to 6 feet. Very good for naturalizing. Plant it in quantity in your hardy borders. Not particular as to soil. Numerous, dainty, recurved, orange yellow, dotted brown, fragrant blooms in July.

Hansonii, 6/9"	.75	7.50	60.00
-----------------------------	-----	------	-------

A very satisfactory garden subject; 4 to 6 feet. Many fleshy, orange-yellow, dotted brown blooms in June. Not particular as to soil, but best in light shade.

Henryii, 6/9"	.75	7.50	60.00
----------------------------	-----	------	-------

The orange Speciosum and an extremely good doer. Not particular as to soil. Many rich, orange yellow, recurved blooms in August-September; 4 to 6 feet.

Humboldt Magnificum, 6/9"	.75	7.50	60.00
--	-----	------	-------

A native of Northern California; 4 to 9 feet and a very satisfactory subject when established. Very desirable for naturalizing among Rhododendrons and shrubs. Many orange-yellow, spotted crimson, recurved blooms in June-July.

Japonicum (small)	.50	5.00	
--------------------------------	-----	------	--

One of the very few pink lilies that we have in cultivation, but one that is considered somewhat miffy. A native of Japan where it grows in the mountainous regions among low growing shrubs. Our stock of this lily has been grown from seed in our nursery and has not been coddled. This is the fifth year since the seed was planted and it has bloomed for the first time; a lovely apple-blossom pink. The bulbs that are offered will be small but should give a very good account of themselves next season and we firmly believe that they will prove much more hardy than those usually obtained from Japan late in the year. Sometimes called Krameri, 3 to 4 feet, June-July.

Kelloggii (small)	.75	7.50	60.00
--------------------------------	-----	------	-------

This is the only pink lily native in this country and is very difficult to obtain. It is found in Southern Oregon and Northern California. Grows 1½ to 2 feet, bearing many delicate recurved blooms, richly suffused

with pink, and spotted sparsely with rich brown, the center rib of the petals is marked with a light green as in Henryii. It has a very delicate fragrance. The bulbs never reach a large size.

Longiflorum, 6/9"	.35	3.50	25.00
--------------------------------	-----	------	-------

This is the familiar Easter Lily that you purchase at Easter and is an extremely good garden subject; growing taller and bearing many large, trumpet shaped, pure white, very fragrant blooms in July; 2 to 5 feet.

Martagon Album (small)	.75	7.50	
-------------------------------------	-----	------	--

This lily is not as largely planted in this country as in Europe where it is found in most of the old gardens. Height, 4 to 5 feet, bearing many waxy white, recurved blooms. The petals are thick as with Hansonii, and it makes a wonderful plant when established in a location to its liking.

Pardalinum, 4/6"	.35	3.50	25.00
-------------------------------	-----	------	-------

A native of Northern California; 4 to 6 feet. Especially recommended for planting in moist locations at margin of lakes and streams. Many recurved orange-yellow blooms tipped with crimson in June-July. This lily will do well anywhere.

Parryii (good blooming)	.75	7.50	60.00
(large size)	1.00	10.00	

A native of the State of California and becoming more difficult to obtain each year, due to laws prohibiting its collection from the wild where it is now almost extinct. We have some fine nursery-grown stock to offer. This lily thrives in a moist location, 4 to 5 feet, bearing many clear lemon-yellow sweetly fragrant flowers in July.

Parvum (small)	.60	6.00	45.00
-----------------------------	-----	------	-------

A delicate lily from the sub-alpine regions of Northern California; 3 to 6 feet. Many orange-yellow bells, spotted maroon with crimson tips in June-July. Rather scarce.

Regale, 6/7"	.15	1.50	10.00
7/8"	.20	2.00	15.00
8/10"	.50	5.00	25.00

This is the latest introduction of the lily family and needs no introduction due to the wide publicity given by the press; 3 to 6 feet. Many pure white, very fragrant, funnel shaped blooms in June-July, with reverse a pleasing reddish brown and a canary yellow throat.

Rubescens (small)	.60	6.00	45.00
--------------------------------	-----	------	-------

A very lovely lily belonging to the Washingtonianum family, but not reaching its height, 3 to 4 feet. Many white, fragrant flowers, lightly spotted with rich brown, which fade to a rich wine color. June-July.

Speciosum Album, 6/9"	.60	6.00	45.00
-----------------------------------	-----	------	-------

Speciosum Rubrum, 6/9"	.35	3.50	25.00
-------------------------------------	-----	------	-------

These are the best of the Japanese lilies and will thrive in your garden under most any conditions; 3 to 6 feet. August-September.

Tenuifolium (small)	.35	3.50	25.00
----------------------------------	-----	------	-------

A very slender, delicate, rock garden subject; 1½ to 2 feet and a very good doer under most any condition. Many bright scarlet recurved blooms in June-July.

Tigrinum Splendens, 6/9"	.35	3.50	25.00
---------------------------------------	-----	------	-------

The old Tiger Lily of your grandmother's garden. July-August.

	Each	Doz.	Per 100
Testaceum, 6/9"	1.50	15.00	

This is one of the finest lilies in cultivation on account of its graceful stature and the clear Nankeen yellow color of its flowers, which form a pleasing contrast with the rich reddish-brown anthers. It blooms in June-July and will reach a height of 7 feet under favorable conditions. Do not plant this bulb deep and **Delivery Must Be Made in August.**

Umbellatum, 6/9"	.35	3.00	25.00
-------------------------------	-----	------	-------

A very thrifty doer with numerous orange-yellow, shaded crimson blooms that are erect; in June-July; 2 to 3 feet.

Washingtonianum, 8/10"	.50	5.00	35.00
10/16"	1.00	10.00	75.00

A native of the State of Oregon and we can not recommend it too highly for naturalizing, although it requires a year to become established; 4 to 10 feet. Many delightfully fragrant, pure white, lightly dotted, maroon blooms in June-July, which fade to a rich wine color as they become old.

Washingtonianum	1.00	10.00	
------------------------------	------	-------	--

This is a distinct variety of the ordinary Washingtonianum in that its flowers do not change color as they fade and each petal is separate and distinct the entire length to its point of attachment at its base giving it a light, airy appearance. Stock of this variety is somewhat limited.

MISCELLANEOUS

Bulbs and Tubers

Anemone

We have some very fine stock of Apennina and Blanda in lovely blues and soft apple blossom pink which have just been released for sale this season. These two species are highly recommended for the "Rock Garden" and are happy in most any well drained location. You may have delivery of these early in August which assures much better results than the bulbs obtained late in the fall, old dried bulbs of Apennina frequently do not show above ground until the second year.

Apennina, dark blue	.15	1.50	10.00
Blanda Atrocoerulea, true dark blue	.25	2.50	17.50
Blanda Rosea, clear soft pink	.15	1.50	10.00

Crocus Species

These bulbs have smaller flowers than the late Dutch introductions, but are correct for the Rock Garden, having a much dwarfer, neater habit, blooming earlier than the large flowered varieties.

Susianus is undoubtedly the finest of the yellows and is a thrifty doer under most any condition, forming a large clump. A spring bloomer. **Delivery July-August.**

.....	.50	3.50	
Speciosus, a very fine bright blue, fall blooming.	.50	3.50	

Speciosus Aitchisoni, a delicate pale blue,
late fall blooming.

.....	1.50	10.00	
-------	------	-------	--

Zonatus, fine large pale lilac flowers, fall
blooming.

.....	.60	5.00	
-------	-----	------	--

The fall blooming crocus should be planted the latter part of July and not later than August to insure satisfactory results. **Delivery July-August.**

Each Doz. Per 100

Chionodoxa (Glory of the Snow)

One of the earliest of the small bulbs to bloom in the spring with a great profusion of gracefull star-shaped flowers. They may be left undisturbed and will increase very rapidly as they are absolutely hardy. Height three inches.

Sardensis. A true rich Gentian-blue	.35	2.50	
--	-----	------	--

Fritillaria

Fritillarias are small bulbous plants that are found native on the Pacific Coast in the woodlands and will thrive in a light well-drained soil, fairly rich in leaf mold. They are absolutely hardy, although they sometimes do not bloom the year following a season of blooming. We offer two of the most satisfactory species for **Delivery in August.**

Recurva. A slender stem about 18" bearing many bright red bell shaped flowers.	1.00	5.00	
--	------	------	--

Pudica. About six inches high with several
clear, golden yellow bells, plant in the full
sun in the Rock Garden.

.....	1.00	5.00	
-------	------	------	--

Iris Reticulata

Iris Species

Reticulata—This lovely little thing bloomed February 1st, in the open, with us this season. A rich violet with a pleasing delicate fragrance. A good Rock Garden subject. It is a small bulb and should be planted in a well-drained sunny location where it will multiply very rapidly. We have the largest stock of this Iris in this country and now offer it at a price within the reach of most every one. **Delivery must be made early in August.**

.....	.25	2.50	17.50
-------	-----	------	-------

Muscari (Grape Hyacinths)

One of the most charming springflowering subjects. They are equally at home in shade or full sun where they will multiply very rapidly. These bulbs are recommended for the "Rock Garden" and are absolutely hardy. Our stock is available for August delivery

Each Doz. Per 100
which will assure much better results than imported stock which comes to hand late in the fall. The following named varieties are offered for **August Delivery**.

Botryoides—The Blue Grape Hyacinth.
..... .35 2.50

Botryoides Album—Fine spikes of pure white.
..... .60 4.50

Heavenly Blue—Produces many spikes of bright, clear-blue flowers.
..... .50 3.50

Ornithogalum (Star of Bethlehem)

Umbellatum—A native of Southern Europe, but perfectly hardy and will thrive under most any conditions, narrow leaves six to ten inches long above which is borne an umbel-like cluster of white flowers with a green stripe on the reverse of the petals in May to June.
..... .35 2.50

Oxalis

Adenophylla—A native of the Andes, is one of the finest Rock Garden subjects that we grow. It forms a close tuft of glaucous-blue, finely folded foliage, literally covered with exquisite cups of a soft rosy-lilac with a yellow eye, from 2 to never over 3 inches high. Plant this small bulb in a sunny, well-drained nook where it will become sturdier and wider with each succeeding year. **Delivery, August-September.**
..... .50 5.00 35.00

Deppei—This is a very fine subject for the Rock Garden or even as a border plant, where it will thrive astonishingly well with very little care. It is a native of Mexico having scaly tuberous root-stalks similar to a miniature lily bulb, four-lobed leaves delicately etched with purple near their base and umbels of ten to twenty coppery-red flowers with yellow throats—six to ten inches high. Delivery of this item is made late in the season and it may be held out of the ground until spring, if the winters are severe.
..... .50 3.50

Enneaphylla—A native of the Falkland Islands with a creeping rootstalk ending in a bulb-like crown. It is the white counterpart of Adenophylla and a most excellent Rock Garden subject, pure white with a faint blush in the heart of the bloom. Plant in cool rich soil. Our stock of this item is small

Each Doz. Per 100
and it is offered for the first time this season at \$1.00 each.

Scilla (Squills)

The May flowering Scillas are one of the most satisfactory of the early flowering bulbs as they are good doers in most any location, even establishing themselves easily when naturalized in the shady woodlands where they will increase rapidly. The following named varieties are offered as some of the best.

	Doz.	Per 100
Campanulata Blue Queen	\$.50	\$ 3.50
Campanulata Peach Blossom	1.50	10.00
Campanulata Queen of the Pinks	1.50	10.00
Italica, Fine Blue. Late	.75	6.50
Nutans Blush Queen	.50	3.50
Nutans Rosea	1.50	10.00
Sibirica Praecox, the Siberian Squill	.50	3.50

Triteleia (Spring Star Flower)

Uniflower, one of the most charming of the early spring flowers with narrow grass-like foliage above which are borne many lilac-blue starry flowers about two inches across in April and May.
..... .50 3.50

Tulip Species

These are the wild tulips from which have been originated all of the large tulips of the present day. They are of much dwarfier habit and are earlier flowered than the other tulips. We have been quite successful in growing in our nursery the following species and do not hesitate to recommend them for any sunny well drained nook in your Rock Garden where they should be left undisturbed for years until they become so crowded that it is necessary to lift them to give them room—plant them quite deep if the soil is light.

Echertii, splendid, large crimson-scarlet flowers, yellow and black center.
..... 1.50 8.00

Kaufmanniana, the Waterlily Tulip, white, yellowish tinged, pink outside, the earliest.
..... 2.50 15.00

Montana, scarlet, center black and yellow.
..... 3.50 20.00

PLANTING TABLE FOR BULBS
