IRIS GARDEN

A. C. KINSEY

1320 EAST FIRST STREET

BLOOMINGTON, INDIANA

CONTINUING our practice of some years standing, we are extending the courtesies of our private garden to all who may be interested in flowers.

The spring and early summer garden will have the most interesting material. The iris season extends throughout the month of May. The height of bloom may come soon after the middle of May, but seasonal conditions will affect this date. We are always disappointed when visitors miss the main display by coming too late in May, so we urge that you telephone later for information concerning the progress of the garden.

We open our garden to all who will come to enjoy and to study the things in it. We are not commercial nurserymen, and we offer surplus plants from our stocks primarily as a convenience to the friends who wish to duplicate varieties they see here. Our sales cover only a small part of the annual additions to the garden. We find much pleasure in seeing the better things go from our collection into so many other gardens of Bloomington and the neighboring communities.

But whether or not you plant a garden, come, and come often, to enjoy our garden, with us!

Selecting the Best Iris

While the horticultural development of the genus Iris has come chiefly in the last fifteen years, there are now several thousand named varieties of these plants. To select the best from this list has become the most difficult task of the gardener.

We now have six hundred of the newer varieties of irises growing in our garden. By studying these in their landscaped settings, you may have a real basis for your choice of iris. In addition we offer you our judgment by rating each variety as a first, a second, or a third class iris. These are not show-room, but garden ratings. We have given much attention to this matter, basing our decisions both upon our own experience, and upon our visits to numerous other large plantings in the Middle West. We have also had the advice of friends who are among the experienced iris growers of the country.

Our ratings are indicated as follows:

FIRST CLASS IRIS. A selection of 72 tall bearded, 4 dwarf bearded, and 6 Siberian irises, indicated with bold faced capital letters. The list includes a complete range of colors, size, and blooming season. It includes many low-priced as well as newer and more expensive irises. Until you know these varieties, there is no excuse for purchasing from the second or third class list. If yours is a new garden, or a small garden with limited space, it is especially desirable that your first purchases be limited to this first class list.

SECOND CLASS IRIS. An additional list of over two hundred tall bearded, 11 dwarf bearded, and 44 Siberian irises indicated with Roman capital letters, and accompanied with only brief descriptions. Here are many fine varieties, some of which you may prefer to some of our first class list. Some of the newer varieties included here may prove to be really first class, but we need to test them for another year or two.

Third Class Iris. A list of 210 tall bearded irises indicated with Roman capitals and small letters, and listed without descriptions. Only the collector who has exhausted the possibilities among better irises is warranted in hunting here for stray items that may suit his individual fancies. Only a part of our third class collection is listed here.

The color and seasonal distribution of our first class irises is shown below:

Light Blue: Princess Beatrice, Yvonne Pelletier.

Medium Blue: B. Y. Morrison, Corrida, Queen Caterina, Rheintraupe, Santa Barbara.

Siberian: Caesar, Emperor, Kingfisher Blue, Periwinkle, Pseudacorus, Turquoise Cup.

TALL BEARDED IRIS

Hardy plants requiring less attention than any other garden perennials.

Transplant early in June, soon after the blooming season is over. Our plants mature earlier than those in more northern nurseries. Do not transplant later than August in this climate.

Plant in well-cultivated soil, 8 to 12 inches apart. Cover with earth, but avoid deep planting.

Avoid manure. Use bone meal if the soil is poor.

Avoid water unless it can be quickly drained off the beds.

Plant three or more of each kind in order to obtain mass effects within a couple of years after planting.

Plant early and late varieties to prolong the season of bloom.

JEAN CHEVREAU. Cream dotted brown	.35
JENNETT DEAN. Lavender blue	.25
JOYA. Deep blue	.50
JUBILEE. Buffy peach and white, a clump being distinctly peach in landscape effect. An entirely new color in the iris garden. Slow in becoming established, but worth it.	.50
JULIA MARLOWE. Pink and violet red	.50
JUMBO. Violet and purple, low	.75
Juniata	.25

Kalos	.35
KAREN. Deep purple red	.25
Kathryn Fryer	.25
KING KARL. Ivory and yellow peach, dotted red purple. Similar to Lona, but so unlike everything else that we can well use both	.75
KING MIDAS. Orange and burnt chestnut	8.00
KING TUT. Reddish and brown, very bright, distinct. Cherry red, with an orange glow when in mass	1.50
Knysna	.25
KOCHII. Rich red purple, early, low. Surpassed by many later-blooming varieties, but unmatched at the early date at which it blooms 3 for 40c. 10 for \$1.	.20
Koya	.25
LABOR. Red purple with heliotrope reflections. Unlike anything else, bright in landscape effect	1.50
LADY BYNG. Pink lavender, very nice	.35
LADY LILFORD. Deep violet purple	1.00
L'AIGLON. Smoky lavender and purple red, large, rich in color	1.50
Lancelot	.20
LA NEIGE. Clear white, low, with a small, open flower which is Japanesque in effect. Surpassed by taller varieties, but there is a place in the garden for this low type of white 3 for 40c.	.20
LENT A. WILLIAMSON. Lavender and wine purple. This, the first really good iris to be raised in America, was originated at Bluffton, Indiana 3 for 40c. 10 for \$1.	.20
Leonato	.50
LEVERRIER. Lilac and rosy violet	.75
LOETITIA MICHAUD. Light blue; fades and winter kills	2.50
LOHENGRIN. Rosy lavender 2 for 6 for 40c. 25 for \$1.	.20
LONA. Rosy buff, sanded rose. Delightfully odd. Pinker than the similar King Karl.	.75
Lord Lambourne	.25
Lord of June 3 for 50c.	.25
Loreley 3 for 40c.	.20
LOS ANGELES. White with blue center, tall, large, majestic in form and carriage. Needs some winter protection	4.50
LOUDOUN. Amber flushed white	1.00
Lycaena	.25
MAGENTA. Reddish, amethyst blue, both a red and a blue in effect! Totally different from any other	6.00
Magnate	.25
MAGNIFICA. Pale violet and purple rose, large, tall. Attractive because of the very large size of the bloom 3 for 70c.	.35
MAJESTIC. Lavender and raisin purple	.50
MA MIE. White touched violet 3 for 40c. 10 for \$1.	.20
Maori King	.25

SIBERIAN IRIS

Grass-leaved plants with dainty flowers poised like butterflies on long stems; very different from bearded irises.

Remarkably hardy in this climate, enduring poor soil, hot and dry summers, full sun, and winter extremes.

Thriving best in partial shade, rich soil, and considerable moisture.

Transplant in early spring (April), well before the season of bloom. Transplanting at any other season is a complete failure in this climate. Prices here quoted are for delivery in the early spring of 1933.

Plant at a moderate depth, keeping newly set plants well watered.

HEMEROCALLIS (Yellow Day Lilies)

Lily-shaped flowers, lemon, yellow, orange, and reddish in color. The May-flowering varieties add the yellow colors needed in the iris garden. The later varieties, blooming from June until late August, are among the brightest of the hardy summer perennials. They are remarkably hardy plants, enduring drought and heat and extreme winters.

Growing best in rich soil, with partial shade and plenty of moisture.

Transplanting is remarkably successful at all times from early spring until late autumn (avoiding the season when the plants are actually in bloom).

Plant moderately deep, in well-cultivated soil, keeping the newly-set plants well watered.

Plant three or more of a kind.

Plant early and late varieties to secure a succession of bloom.

PRICES

Prices quoted on bearded irises are for standard, single divisions guaranteed true to name. While we have furnished double rhizomes in previous years, we have concluded that single rhizomes, the standard of practically all dealers, give better results. Our prices are fixed so it is possible to obtain two or more singles for the price of one double.

Quantity Prices. Wherever our stocks permit, we have set unusually low prices for three, ten, or more plants of a kind. It costs us no more to dig and deliver several of a kind than it does to handle a single plant. While we offer no other discounts, the quantity prices quoted are the equal of the best wholesale prices.

There are many good irises at these quantity prices of ten, six, and even three cents per plant. With prices as low as this, it should be possible for anyone to bank his home in a mass of bloom.

These lowest prices do not pay for the extra labor we must hire to dig the plants. This, however, is our method of giving away our surplus. We find that when we make outright gifts, they are rarely cared for. By setting a nominal price on them, we guarantee that they will be cared for!

Delivery

We have been able to lower prices by setting them on a **cash and carry** basis. Plants will be delivered by parcels post at an additional charge of 25 cents per order.

Delivery will be made any week-end after the first of June. Plants set in your garden soon after we have dug them will grow better than plants which have taken some days to come from more distant nurseries. If plants are not called for within three or four days after the date agreed upon by the purchaser, we will make delivery at our regular charge.

Weather-Proof Labels

Metal labels, printed to your order, complete with metal stakes: 10c each. 10 or more at 6c.

American Iris Society

We wish again to commend the work of the American Iris Society. In its publication of four bulletins each year, it provides interesting and timely information indispensable to the grower of an iris garden. Dues, \$3.00 a year, may be sent to the Secretary, J. B. Wallace, 129 Church Street, New Haven, Connecticut.
