An Easy New Way
To Grow Winter Flowering Bulbs
in Your Own Home
by Using
Wayside Gardens
Bulb Fiber
Patent Pending

A CHARMING effect can be obtained by growing spring flowering bulbs in bowls, without drainage, by using our specially prepared Bulb Forcing Fiber. This material is light and clean to handle. Indeed, it is in every way preferable to soil or pebbles for growing bulbs.

Culture: Moisten the fiber to saturation, fill the bowl with the soaking wet fiber mixture up to the rim and plant the bulbs in the same manner as with ordinary soil. A little fiber should be shaken down into place after planting but should not be pressed down too tightly or the bulbs will be forced upwards when root growth commences.

After planting, adopt either of the following plans:

The bowls may be placed in a cold frame, airy cellar or in a dark or moderately dark airy cool room. They must never be placed in a close cupboard. It will not be necessary to give a great deal of water; perhaps once every 2 weeks.

In the case of bowls placed in the cold frame there will not be much need to give any water. Where, however, the bulbs are not exposed to rain, the bowls should be examined twice a month, care being taken that the fiber mixture is kept uniformly damp. For the first weeks after planting, additional water should be given sparingly, sufficient only to encourage root action. As soon as the bulbs are well rooted, water should be given more freely. If the mixture is allowed at any time to become dry, the flower buds may go blind. Should by any chance too much water be given, the bowls may be drained by tipping them on their side.

When the bulbs have made a good top growth in the dark, the bowls should be placed in a sunny window where they will get the morning sun. They must have sufficient light and air to prevent the foliage from becoming drawn. Never place bowls on top of radiator cover. A temperature of 55 to 60 degrees is sufficient to obtain good blooms; the bulbs resent too warm a temperature.

CROCUS SIEBERI
illustrated on the right, is most satisfactory for growing in fiber.
Wayside Gardens Bulb Forcing Fiber

Roman Hyacinths, 5 or 6 in a bowl, make a very charming table decoration, and if potted early in September may easily be had in bloom by middle of December; if a number are potted at the date mentioned, a succession of these charming flowers may be had until the middle of January by bringing a bowl into warmth, say every 2 weeks.

Freesias are delightful flowers. If potted in September or early in October, keeping in a cool frame till well rooted, they may be had in bloom early in February. They require plenty of light, otherwise they become “drawn” and do not flower well. Must be grown very cool, about 55°, and the bulbs must never be exposed to frost before bringing into the house.

Paper-White Narcissi, Soleil d’Or Narcissi. These, if planted from early in September to the middle or end of October, will bloom from about the middle of December to the middle of January. Grow much stronger in our fibre than they do in pebbles. The flowers also last much longer.

Poetaz Laurens Koster, Poetaz Klondike. Charming specimens for house decoration grown in bulb fiber in bowls. They are deliciously perfumed and specially recommended. Should be grown in the same manner as Roman Hyacinths.

TRUMPET DAFFODILS

King Alfred. The merit of this variety is that it blooms early, and by planting in the beginning of October it may be had in bloom from about January onwards. It has a very bright yellow flower, which is thrown well above the abundant foliage.

Golden Spur does wonderfully well treated in the same way. Emperor always makes a handsome display, but as the bulbs are large it is desirable to have a large and deep bowl to put them in.

Madame de Graaff is strongly recommended for growing in bowls. It opens with a pale yellow trumpet, but goes a creamy white with age. One of the most charming of all white Daffodils.

Van Waveren’s Giant, Victoria, Olympia, are favorite varieties. They always do well.

SHORT-CUP DAFFODILS

Lord Kitchener is a favorite at a moderate price. A certain bloomer, very floriferous, generally throwing 2 and very often 3 flowers from each bulb.

Campernelle Rugulosus with its rushlike foliage and pretty yellow starlike flowers like a large Jonquil generally 2 or 3 on a stem. Always does well and cannot be too strongly recommended.

The Best Bulbs to Grow in Wayside Gardens Bulb Forcing Fiber

VARIETIES RECOMMENDED

Barri Conspicuous with its lovely rich orange cup, generally give 2 or 3 flowers from a first size bulb.

White Lady, another charming variety, does well. We do not advise the very expensive varieties as one can derive quite as much pleasure from the best of the ordinary ones.

Hyacinths do wonderfully well in this fiber. First size bulbs or second size bulbs in a bowl make a charming display. All the varieties offered in our catalog may be used. Do not plant Mixed Hyacinths; they never look so well as all one variety, owing to their not blooming together.

SINGLE EARLY TULIPS

Special care is required to see that they do not get dry at the roots because if this happens the pores of the roots close up and flowers fail.

Pink Beauty. A lovely rich pink, very lasting.

De Wet. Beautiful shade of copper.

Mon Tresor. Large, pure golden yellow.

Brilliant Star. Bright vermilion-scarlet.

HYACINTHS

Vermilion Brilliant. Bright, glistening scarlet with a yellow base.

Prince of Austria. A beautiful orange-scarlet which grows tall and is most effective.

DOUBLE EARLY TULIPS

Murillo. Delicate rose-pink, flushed white.

Mr. Van der Hoef. Beautiful golden yellow.

Peach Blossom. Bright rose-pink.

Couronne d’Or. Rich golden yellow, shaded copper.

Tea Rose. Saffron-yellow. Nearly all Early Tulips do well in Bulb Fiber if care is only taken to keep the roots thoroughly moist, particularly when the flower bud is showing.

LILY-OF-THE-VALLEY and DIELYTRA SPECTABILIS (Bleeding Heart) are easy subjects and having such graceful flowers are strongly recommended.

SCILLA SIBIRICA CHIONODOXA SNOWDROPS IRIS RETICULATA

CROCUSES (Except Yellow)

These bulbs do well and give exquisite effects if looked after and they are highly recommended.

COMPLETE PLANTING INSTRUCTIONS for all the varieties we have suggested will be sent with each order.
Quality Without Extravagance

WITH pride and a great deal of satisfaction we are able to inform our customers that the greatest bulb growing firm in Holland has selected Wayside Gardens to introduce for them their new developments in Tulips and other bulbs.

Progress made especially in the development of Tulips and Daffodils makes it possible for us to furnish you this season with gorgeously colored New Ideal Darwin Tulips. New Breeder and the lovely pastel colored Chinese Lantern Tulips. The charm and breath-taking beauty of the new Narcissi is all too inadequately portrayed by the color illustrations shown in this book.

True to our policy which has made Wayside Gardens famous, we are listing all these new things at most reasonable prices. To avoid confusion all inferior or indifferent varieties have been replaced by these magnificent novelties at tempting prices.

The quantities available of the newer bulbs are limited. May we, therefore, count on you to order early!

All Rare Bulbs Must Be Ordered Before August 1st

AUGUST FIRST is the latest we can accept orders for the rare and unusual bulbs offered in this catalog. These rare bulbs are offered at a very low price and we cannot take any risk of having this stock on hand unsold. The low price will not permit any surplus or losses. They are, therefore, imported to your order only.

All standard varieties have been indicated by a star and will be carried in stock in the autumn. Ordering the standard varieties early, now if possible, will be very helpful to us and we sincerely ask for your cooperation.

TOP SIZE BULBS ONLY! are sold by Wayside Gardens. Bulbs are available in many sizes and many grades, but the "Cream of the Crop" for which we pay a premium to the best and most critical growers, is set aside for us. We do not, under any circumstances, wish to compete with cheap bulbs. Our prices are low for the magnificent quality bulbs we sell.

Hundreds of letters from expert gardeners and enthusiasts testify each spring that Wayside Gardens quality bulbs are in a class by themselves.

The cultural instructions which go with each order will enable you to grow exhibition blooms without difficulty.

We Guarantee every bulb we send out to be first class in every respect and absolutely true to name, and we further guarantee that all will bloom for you if you will give them reasonable care and carry out our cultural instructions which are enclosed with every order. Your money will be refunded or new bulbs sent if they do not come up to our claims or your expectations.

We guarantee safe arrival to all points within the United States and upon your notice will replace immediately any damaged stock at our expense.

A like guarantee is, we believe, not made by any other firm in America. It is only possible because of two things:

First, the bulbs we sell are the choicest money can buy and are imported from the best and most critical grower in the world.

Second, the men working for and at the head of Wayside Gardens are skilled horticulturists, who take pride in their work and are trained to do things as they should be done.

Buy from Wayside Gardens and see the difference!

The New Ideal Darwin Tulips

Our latest introduction, the "Ideal" Darwin Tulips, are the finest type of Darwins raised. They are far superior to the ordinary Darwin Tulips. The blooms are an outstanding triumph to our hybridists' art. A glorious flower combining a more graceful habit with perfect form, superb substance and exceptional lasting quality. Perhaps the most remarkable feature of this gorgeous new strain is the earliness of many of the varieties and their adaptability for early forcing. Ideal Darwin Tulips flower a week earlier and are still in perfect condition when the common Darwin Tulips are through flowering in the garden.

It is with a great deal of pride that we inform you that we have been selected from among the many importers to introduce these magnificent new Darwin Tulips in America.

Darwin Tulips

Standard Varieties

The colors include the brilliant scarlets and crimsons, and the more somber tones of red. The shades of rose and pink, of violet and purple, are unsurpassed for their delicacy or their richness of color. There are slate blue and blue-violets which might almost be called blue, while Darwin’s “Black Tulip” is very nearly realized in some of the dark maroon varieties. All the bronze and buff tones are Breeders; while bright yellow and orange-scarlet must be sought among the Cottage Tulips. The Darwins may be left undisturbed for years, and if taken care of, will last many years. The varieties offered are the best standard kinds; inferior sorts have been omitted.

The figure following the name indicates the relative time of flowering.

Lily-Flowering Tulips

This type of Tulip is now immensely popular in American gardens, the lily-like forms of the flowers being a most pleasant change from the regular Tulip shape. Parrot Tulips

The artistic form and coloring makes them especially suitable for cut flower purposes. In the garden, if planted in borders or groups, they are not always satisfactory as they lack the vigorous, straight stems of the other Tulips with the exception of the new varieties which have straight and tall stems as the Darwin Tulips. They are extremely effective planted in long drifts in front of evergreens.

Chinese Lantern Tulips

First Introduction.

For the time being we will offer these gorgeous new hybrids under a separate heading. Should we have offered them for sale in the alphabetical list of Tulips they would be difficult to describe or might be overlooked.

Imagine a handful of Tulips with the delicate pure pastel shades of our finest Sweet Peas and you have but a fair description of their colors. The general effect, however, is that of lighted, delicately colored Chinese Lanterns.

The perfectly formed globular blossoms glow with an iridescent light not heretofore seen in Tulips. The colors are too exquisite to accurately describe. They have been admired by visiting growers from all over Europe.

The introduction of these lovely hybrids has been given to Wayside Gardens. We are offering them to you under number in a collection and will be grateful for the suggestion of appropriate names. The colors are all in those elusive tints of salmon, orange and salmon-pink.

Chinese Lantern Tulips, 3 bulbs of each of 6 distinct varieties, 18 bulbs in all for $4.50. (Stock limited and offered for as long as unsold).

Bizarre and Bybloem Tulips

(Old Dutch Tulips)

Bybloem and Bizarre Tulips are “rectified” Breeder types. The Tulips are of an old race which has been grown in Holland and in France since the beginning of the seventeenth century, and which caused the famous Tulip craze in Holland and in France since the beginning of the seven-teenth century, and which caused the famous Tulip craze in 1637. The Breeder are queerly striped and feathered with brown stripes and feathering on a yellow ground. They flower about the same time as the Breeder and Darwin Tulips but do not grow quite so tall, and are seen at best advantage when planted in clumps in the herbaceous border or among evergreens and shrubs. They are above all sensational show Tulips. All form rare artistic beauty.

Single Early Tulips

Few, if any, of the spring-blooming flowers rival the Single Early Tulips for brilliancy of bloom or ease of culture. They are excellent subjects for formal beds on the lawn or for garden borders. While they do not possess the same size of bloom and length of stem as the May-flowering Darwin, Breeder and Cottage varieties, they are used where earlier blooms are desired. Many of the varieties may be forced in bloom in January, while all of them may be easily had in flower in pots late in February or early March.

Rembrandt Tulips

Rembrandt Tulips are nothing more or less than Darwin Tulips in which white, lavender, red or other colored stripes or flakes have appeared. The blending of colors is at all times in perfect harmony and most attractive and colorful. They are especially fine when used for cut flowers. They bloom at the same time as the Darwins and require the same care. We advise their use in a mixture only.

Triumph and Mendel Tulips

Much has been said about these two types. So far nothing really worth while at a reasonable price is available and after consulting with our growers we have decided not to offer any. We do, however, unreservedly recommend the "Ideal Darwin Tulips" to those seeking to improve their Tulip collections.
Unnamed varieties of Darwin, Breeder, Lily-flowered and Cottage Tulips blended in lovely colors; with long stems for cutting. See page 18 for price.

Botanical Tulips and Species

Tulip species, coming as they do from southern Europe and Asia, should all be planted in dry sun-baked locations. No water should reach the bulbs during the summer.

The following collection of Tulip Species or Botanical Tulips includes a great number of beautiful and interesting varieties, which show a bewildering variation in size and shape of flowers, structure of the leaves, habits, etc., and they only have in common that they grow wild in some part of the world, Asia Minor, Central Asia, Greece, the Mediterranean, etc. Cultivation has not modified them and they may be planted in the rock garden between creeping plants or in colonies in small, warm nooks, a situation where the larger flowered Garden Tulips would be out of place. (Varieties offered by the dozen we will gladly supply in quantity of three).

There will be Darwin Tulips, Cottage Tulips, Breeder Tulips, and Lily-Flowered Tulips in the mixture. All will be long-stemmed varieties excellently suited for cutting, anyone who simply wants a few Tulips for a bright spot in the garden could not possibly do as well anywhere at any price. **Dutch Iris**

*Improved Spanish Iris—for Garden Planting.*

This very distinctive group is of recent origin and has in a few years won international recognition. The flowers are not only superior in substance, brilliancy and purity of color but also earlier, larger and of greater refinement than the old Spanish Iris. The new hybrids we offer are readily distinguished by the narrow orange stripe on the falls, while the older varieties have a larger yellow blotch. These Iris are unsurpassed as cut flowers, since they will stand any amount of handling which makes them valuable for the commercial grower and florist. Their hardiness and large color range have made them very popular for garden purposes, though in extreme climates they need some protection. The varieties we list have been carefully selected to give the full range of colors. Bulbs are supplied in suitable size for garden planting and are all guaranteed to bloom.

*Francisca Drake.
$2.00 each; $22.00 per 12.
It is impossible to describe adequately the beauty of this unusual flower of a distinct new type; the pure white perianth petals are of unusual substance, an inch and a half wide, and tipped with cream at the base, which shows through on the outside; the cup, wide and deep, is golden yellow at the base, changing gradually to flame-orange at the densely frilled edge; the flowers are held well above the fine foliage and give the effect of a flock of white seagulls taking flight; strong-growing and free-flowering. (Color illustration, page 28).

Gallipoli.
40c each; $2.95 per 12.
World-famous variety, citron-yellow perianth, cup deeply fluted to base, and with a double frill effect at edge, is yellow, shading to vivid orange, buds and flowers somewhat drooping, very decorative.

Among all the fine Daffodils of recent introduction, no other has more quickly made a name for itself. A flower of great size, 4½ inches across, with wide flaring trumpet 2 inches across, the whole flower being finely proportioned, and borne on a tall stem with a good neck; in color the perianth is pure citron-yellow, and the cup chrome-yellow, deepening slightly at the frilled edge; conspicuous styles of the same shade as the perianth add to its beauty; outstanding and in every way a satisfactory as well as a sensational flower, both in the garden and on the show table.

*Thalia. *$3.25 per 12; $23.25 per 100. In addition to a peculiar attraction at first sight, this flower leaves one with an impression that it is white, yet it is a whiteness that is not white. The recurving petals and the angle of the three trumpets are unlike the conventional short-cupped Daffodil. The stem is dark green, round and reed-like thin. Some call it the "orchid flowered" Narcissus, which adds to the mystery. Thalia provides unusually good material for artistic arrangements. At the flower shows its "spell" evokes endless comment and we consider it one of the loveliest of this group.

**Cyclamineus Hybrids**

Division 6: Cyclamineus blood like that of Triandrus, imparts such a distinct form to Daffodils, that a separate division has been made for its hybrids, which have trumpets of rich yellow, straight and tube-like, and perianths reflexed as in a Cyclamen; very early flowering.

Daffodils for Naturalizing

The greatest and most effective use of Daffodils is to naturalize them in quantity in meadows and orchards, in woodlands and along the driveway, on the bank of the brook or along the shrubbery.

By planting some bulbs on the south side and some others facing north, a long period of flowering, lasting well over a month, may be enjoyed.

Daffodils are the most prolific of flowers. If you plant a single bulb it will not be long in gathering a family, and in the course of two or three years the spot in which it grows will have become as populous as the tents of the patriarchs.

Planting mixed Daffodils is an investment that pays large dividends, if the right varieties are used.

The mixture presented by us is made up from named varieties and should, therefore, not be confused with other mixtures offered. This mixture is not grown as such, but varieties are selected that are especially adaptable for naturalizing and will give an abundant and prolonged flowering period, increasing from year to year.

*12 bulbs for 75c; 100 bulbs for $5.00; 1000 bulbs for $45.00; 10,000 bulbs or more, special prices on request.

No Other Varieties Except Those Preceded by a Star (*) are Carried in Stock in the Autumn.
Lilies

So well known that to mention their beauty and utility seems futile. A few simple, yet very important, rules to grow them successfully should be carefully observed. First, provide adequate drainage and this must be adequate. Secondly, the bulbs of most varieties require some shade while at the same time allowing the flower stalk to reach the sunlight. Thirdly, select proper varieties, we will gladly help you in this case. Lilies are not like tulip bulbs, all grown in one country under one and the same conditions, but are gathered together from many foreign countries. They all have different habits and flowers, and ripen off at different times of the year; therefore, orders for Lilies can not always be filled at one time, many arrive too late for autumn planting, thus necessitating carrying over the bulbs until spring.

Culture and Care. A booklet on the care of Lilies, giving explicit and detailed cultural instructions for all the varieties offered will be sent to you upon receipt of 25 cents; it is free with orders for Lilies of $10.00 or more. You will find it contains all the information necessary to grow Lilies to perfection.

Colchicum • Meadow Saffron

(Giant Autumn-Flowering Crocus)

Colchicum are autumn-flowering bulbs with large Crocus-like blossoms which appear during the months of September and October, without foliage. The foliage, however, appears early in the spring about the same time the Tulips are in bloom and disappears in June. They are especially recommended for planting between the taller growing rock plants such as Cerastium, Vinca, Pachysandra and the various Sedums, where their bold, checkered blossoms are seen to the best advantage. Blooming in September and October when flowers in the rockery are scarce, they are especially valuable. They may be also planted in the open woods or in naturalistic plantings of any sort. The bulbs, if kept indoors, will bloom during September and October in the window without any earth or water and after blooming, the bulbs may be planted in early November outdoors, and will not suffer in the least.

Supreme Hyacinths for Exhibition

No one would have expected that our old Mother Earth contained such entrancing fragrance had not Hyacinths, by some miracle of alchemy, revealed it to us.

Here, too, we have it combined with the widest possible range of color, and even with flowers of the truest blue—in every shade—the very rarest combination.

Largest Bulbs for Forcing and Indoor Culture. 19 centimeters or over, except where noted . . . $0.20 $2.00 $16.00
Smaller Bulbs for Indoor or Outdoor Culture. 17 to 18 centimeters, except where noted . . . . 1.80 12.00

They open to greet us before the new spring dawns, if we but give them a share of our garden, and pour out their incense as in token of their gratitude and thanks for their deliverance from a long imprisonment.

Of importance to us all is the greatly reduced price of Hyacinths. We hope you will take advantage of the opportunity by planting them freely.

Dark violet-blue; splendid large trusses. One of the best known blue Hyacinths.
*Lady Derby.
Beautiful clear rose-pink, with large, compact trusses. Early and fine for forcing and bedding.

French Roman Hyacinths

The flowers are delightfully fragrant and each bulb will throw up from 3 to 5 spikes. For forcing, 4 bulbs are generally planted in a 5-inch pan. Because of their early flowering and ease of growth, they are successfully grown in bowls with pebbles in the same manner as Paper-White Narcissi. Flowers may be had from December until March if plantings are made in succession.

*White.
$1.20 per 12; $9.00 per 100. Until this year the price of the White French Roman Hyacinth has been quite high. We are glad to be able to offer this attractive early, indoor-flowering Hyacinth again at a very moderate price. Mammoth bulbs.

Roman Hyacinths, as well as Paper-White Narcissi are very easily grown in Wayside Gardens bulb forcing fiber.

The strain we offer is the finest; strong bulbs throwing vigorous stems with 4 to 6 gigantic blooms of the most perfect form, ranging in color from pure white grounds with varied markings of rose, red and crimson to the richest self colors as scarlet, crimson and bright red. We can supply in mixture only. Delivery from November until April of giant bulbs guaranteed to bloom.

- **Hali lycoris squamigera.** Each, $1.00; $10.00 per 12. Produces in early spring attractive green foliage which grows until July when it ripens and disappears. About a month later, as if by magic, the flower stalks spring from the ground to a height of 2 to 3 feet, developing an umbel of large, lily-shaped flowers, 8 to 12 in number, of a delicate lilac-pink shade. The bulb is perfectly hardy; must be planted in fall. Cover crown about 4 inches.

Anemone

- **St. Brigid.** 85c per 12; $6.25 per 100. These are the popular Anemone so frequently seen in the florists' shops in the early spring. They are easily naturalized in almost any soil. Plant them about 3 inches deep and leave them alone. They are especially happy under oak and deciduous trees, in the rock garden, or in rough, gritty soils.

Babiana

The colors vary from gentian-blue to wine-purple. They reach a height of about 8 to 10 inches. For Northern climates they should be grown like the Freesias for living room or conservatory decorations, but in mild climates they should be used in the rockery where they make magnificent brilliant masses of color.

Calla - Richardson

Bulbs should be set with the crown, or top, protruding just above the surface. When in growing condition, warm water given several times during the week will hasten the flowering period and increase the number of blooms. Plant but one in a pot. We call special attention to the Yellow Calla, which is one of the grandest varieties in cultivation, and not valuable for house or conservatory decoration. Plant Calla in late fall of the year. In April or May dormant bulbs may be planted near the pool in a sunny spot where they will flower beautifully in August or September.

*Elliottiana (Yellow Calla). Each, 35c; $3.50 per 12.

Most ornamental foliage if grown near pool where it will get plenty of water.

Calochortus

(Hardy—Give Slight Protection)

Until one has seen a good collection of these plants, he has no idea how much Nature can do in the variation of one flower. All Mariposas are forms of Calochortus, yet there are several strains, all with the slender grace of stem belonging to the species. Cup-shaped flowers, one to many on a stem, wonderfully marked with eyes and dots and pencillings in rich colors, are characteristic. Yet each strain carries out the plan on a color scheme of its own, and then can be compared only with the orchids in wonderful variability of beauty. "Mariposa" is simply the Spanish word for butterfly, and is applied to these Tulips because the eyes and markings of the flowers are so much like those on a butterfly's wings. The bulbs are small and should be planted about 2 inches deep and covered during winter. (Color illustration, page 49).

*Godfrey (White Calla). Each, 30c; $3.00 per 12.

Very showy in mass plantings. Forms flower spikes, bearing from 12 to 15 flowers of a sky-blue with a pure white heart, creating a lovely effect. They should be planted in the fall, 3 inches deep, about 18 bulbs to a square foot, in a sunny location or in half shade and in places where they can remain undisturbed for a number of years. The flowers will cross with one another and will seed themselves, forming natural colonies. All are 6 to 7 inches high, therefore, excellent in the rockery as well.

Chionodoxa - Glory-of-the-Snow

(Hardy—Give Slight Protection)

A mass planting forms one of the most sumptuous displays of floral beauty, a mass of blue and white, intense and brilliant. They bloom at the time of the Crocuses, producing dwarf flower spikes, bearing from 12 to 15 flowers of a sky-blue with a pure white heart, creating a lovely effect. They should be planted in the fall, 3 inches deep, about 18 bulbs to a square foot, in a sunny location or in half shade and in places where they can remain undisturbed for a number of years. The flowers will cross with one another and will seed themselves, forming natural colonies. All are 6 to 7 inches high, therefore, excellent in the rockery as well.

Granthis - Winter Aconite

(Hardy—Give Slight Protection)

Plant Bulbs Immediately Upon Receipt

These produce about 2 weeks before the Crocuses are in bloom, little yellow flowers like Buttercups about 3 inches above the ground, with settings of fine green, frilled collars which never seem to mind the worst of weather conditions. Will thrive under trees where few other plants can hold their own. They seed themselves freely and colonies from self-sown seed are soon formed. Plant at once upon receipt, firmly, 2 inches deep in shade or full sun, about 18 bulbs to a square foot.

Standard Varieties

*Hyemalis. 60c per 12; $3.50 per 100.

The common Winter Aconite, clear yellow, very early. Good for the rock garden, under Sedums or under trees. Plant bulbs at once when received. (Color illustration, page 43).

Beautiful new hybrid, raised in our nursery, with large shiny, golden yellow flowers. As the flowers are sterile, they last a considerable time in beauty.

They thrive in any sunny, well drained border. They should be planted in early fall only.

Erythronium - Trout Lilies

These are charming woodland plants, producing in early April, small lily-like flowers of which the colors run in delicate tints of white, pink, cream, bright yellow and rose. Fritillarias

Fritillaria • Guinea Hen Flower

(Hardy)

Fritillarias are lovely bulbous plants for rock garden or indoor culture. The stems are lealy and most graceful, with many pendent, bell-like flowers. One species found in Southern California is called "Mission Bells," while in other places local species are called Brown or Chocolate Lilies.

Standard Varieties

• Meleagris. $1.20 per 12; $9.00 per 100. This is the pure white form of this interesting type described above. Twelve inches high.

Rare and Unusual Varieties

Meleagris, Aphrodite. $2.30 per 12; $15.25 per 100. A very fine strong growing variety with large white flowers, quite a little better than the common Alba. Fourteen inches high.

Meleagris, Artemis. $2.30 per 12; $15.25 per 100. Flowers greyish purplish checkered, very fine variety. Fourteen inches high.

Fritillaria • Mission Bells

The true Mission Bells do better in a clay soil in full sun. The woodland Fritillarias like woodland soils and conditions, and in cultivation some shade and a free soil. They are hardy as far north as Wisconsin.

• Pudica. $1.75 per 12; $12.00 per 100. Of still a different habit. A low plant about 6 inches high with a single clear bright yellow bell. Likes sandy or loose soils and a warm spot in the rockery where you will enjoy it immensely.

• Mixed Varieties. $1.00 per 12; $7.25 per 100. This mixture is made up of Mission Bells and varieties of Meleagris, and would be very interesting in the rockery.

Galanthus • Snowdrops

Snowdrops belong to the most beloved early flowering spring bulbs. They require very little attention, and can remain undisturbed for years and years. They like rather moist and cool soil. To get a lovely effect they must be planted thickly, while they can be grown under trees and shrubs, in woodlands and in lawns. In the latter case, the lawn should not be mown before the leaves are withered, or next year's blooms may be spoiled.

Standard Varieties

• Nivalis. 70c per 12; $4.75 per 100. This is the old-fashioned favorite. Its lovely white nodding blooms are out before the frost is out of the ground; one of the lovely bulbs that tell us spring is almost here. A group naturalized in the shade of shrubs or under trees is worth while. Once planted they remain for a lifetime. (Color illustration, page 43).

Nivalis flore pleno. 85c per 12; $6.00 per 100. Double form of the common Snowdrop, requiring same care.

• Elwesi. 75c per 12; $4.75 per 100. This is a larger type than the old-fashioned Galanthus Nivalis and comes from Southern Europe. It is a very fine kind for the warm parts of the United States where the common Snowdrop does not do so well.

Rare and Unusual Varieties

• Byzantinus. $1.65 per 12; $11.25 per 100. The Byzantine Giant Snowdrop, broad shiny leaves like Galanthus Plicatus and large snow-white globular flowers. Very early flowers; in mild winters we often have flowers here in January. It requires a somewhat sheltered position. May be gently forced in pots.

Nivalis Maxima. $1.20 per 12; $8.75 per 100. Strong growing, large flowered form of the Nivalis.

Nivalis Viridi-apice. $1.20 per 12; $8.75 per 100. Green tipped petals, large flowers on strong stem.

Plicatus. $2.20 per 12; $14.25 per 100. The great Crimean Snowdrop, broad plicate leaves and large globular pure white flowers.

No Other Varieties Except Those Preceded by a Star (*) are Carried in Stock in the Autumn.

They are easily grown indoors in the North, but in the South, may be grown outdoors in ordinary good garden soil.

**Muscari - Grape Hyacinths**

Muscari are charming spring-flowering subjects. They can grow under trees and shrubs and also do well in full sun in the border or at a sunny spot of the rockery, without any special attention. They are best planted immediately on receipt and can remain undisturbed for years.

**Botryoides coeruleum.**

60c per 12; $3.75 per 100.

Bright blue, very free-flowering at the time of the Crocuses. This is the common blue Grape Hyacinth and fine in the rockery. Foliage is more compact, is better for the rockery than Hyacinth Botryoides. (Color illustration, page 48).

We urge all garden lovers to use this delightful plant in quantities, as it is permanent and so helpful to create beautiful pictures, especially in shady places.

*Suitable for pots or hanging baskets for winter flowering. They are excellent inexpensive small plants for decorating the home and growing on window sills.*
Scilla • Squill

The rich dark blue of Scilla bifolia and the bright blue of Scilla sibirica in early spring render them invaluable for edgings or for massing in flower beds and borders. As they bloom so early in the year, it is advisable to give them a sunny location. They are not particular about the soil in which they grow. They are ideal for the wild garden but they are not to be despised in the border, especially if they are left alone for 2 or 3 years without being disturbed in any way. They are splendid in the rock garden. Never plant less than 12 to 18 bulbs in a clump.

Standard Varieties

*Sibirica (Siberian Squill). 90c per 12; $6.25 per 100. Earliest to flower, connecting the flowering of the Crocuses with the Narcissi. Fine for naturalizing, producing drooping, bell-like flowers on stems 3 to 4 inches high. Succeed well in the rock garden. Color bright blue. Plant 3 inches deep in shade, half shade or full sun. Giant bulbs are offered above.

**Sibirica. 65c per 12; $4.00 per 100.**

Large flowering size bulbs, No. 1 grade.

New and Rare Varieties

*Bifolia. 80c per 12; $5.25 per 100. This species flowers in March with deep gentian-blue flowers. They are very beautiful in combination with the early flowering Eranthis, Snowdrops, etc.

Bifolia alba. $4.50 per 12; $35.00 per 100. Very deep blue, tall and larger spikes than the Sibirica.

Sibirica azurea. $1.65 per 12; $11.25 per 100. Light blue, distinct and beautiful form of Sibirica.

Sibirica taurica (multiflora). $1.30 per 12; $9.25 per 100. A very charming variety with pretty light porcelain-blue flowers, with darker blue line down the center of the petals; flowers 2 weeks earlier than Sibirica.

Sparaxis

*Finest Mixed. 70c per 12; $4.75 per 100. Delightful spring-blooming Cape bulbs of the Ixia group, their beautiful flowers being borne on graceful spikes about 6 to 8 inches high and the colors of the brightest and all shades. They are tigered, blotched, spotted, streaked and flushed, a complete riot of color. They are also excellent for conservatory and indoor treatment. For the southern rock garden they are indispensable. Protect in cold climates.

Sternbergia (Hardy)

*Give light protection.

Lutea major. $4.00 per 12; $30.00 per 100. A very effective autumn-flowering bulbous plant producing crocus-like flowers of a rich golden yellow. The bulbs make a charming decoration if planted in bowls or pots and flower a few weeks after planting. Out-of-doors the Sternbergia likes a warm, well-drained situation on banks or borders, where it should be left undisturbed. The bulbs should be planted 9 inches deep, and in cold districts a covering of dry litter should be given in winter. Fine for the rock garden.

Triteleia • Milla

*Uniflora violacea. 70c per 12; $4.75 per 100. A roothlike bulb which produces in early spring a pale violet-blue flower with white center. Somewhat resembles the Chionodoxa, is delightfully fragrant. They spread and multiply with amazing rapidity and are excellent in the rockery or under shrubs or trees where nothing else will grow. They are hardy, but like a little protection. About 3 inches high.

TRILLIUM (Hardy)

Trilliums are very attractive plants of the Lily family. The forms known as Wood Lilies or Wake Robins are well known in the East and are fine woodland plants. Of these, the best is Trillium grandiflorum. A better plant for the shaded corner, damp woodland, border of streams where the soil is moist, or for the shaded parts of the garden, does not grow. It takes a year for them to take hold, but they will then improve for years. There is no better bulbous plant to naturalize in gravel, loam, sand and heavy clay; require no care.

*Grandiflorum. $1.40 per 12; $8.50 per 100. This is the best of all the Trilliums growing about 12 to 15 inches high and produces large, starlike, white blossoms very early in the spring.

Tritonia

*Crocata. 70c per 12; $3.50 per 100. This interesting bulbous plant is commonly known as the Orange Ixia, which it resembles. It is very floriferous; forces easily and produces lovely orange flowers. Give it the same treatment as Freesia and you will enjoy it very much. Height about 10 inches. Lovely in the rockery in southern gardens.

Vallota

*Purpurea. Each, 65c; $6.00 per 12. The Scarborough Lily, a South African native and one of the most attractive of the Amaryllis family, growing sturdily and increasing rapidly. Many flowers slightly cupped, upright, of very bright red. It requires the same culture as the Amaryllis, usually being potted up in the autumn. Avoid over-watering. Very scarce.

PLANTING. The table above shows the number of plants or bulbs required to fill a circular bed of the dimensions given. In planting, begin at outside row—where 6 inches apart, 3 inches from edge of bed; where 12 inches apart, 6 inches from edge of bed. It is customary among professionals in planting a group, their beautiful flowers being borne on graceful spikes; flowers 2 weeks earlier than Sibirica.
Hardy Plant and Alpine Plant Seeds

 Fresh Seeds

 Gathered at Wayside Gardens

 Several years of experience and the observing of results have proven to us beyond a doubt that seeds of Hardy Plants and Rock Plants produced under the more favorable American climatic conditions germinate better and are superior to every way over imported seeds. This fact has been so forcefully brought home to us that wherever possible we harvest our own seeds at Wayside Gardens for the propagation of our stocks. The great variety of plants grown by us (we can say without boasting that our collection of plants is the greatest ever brought together in one nursery in America) makes it possible for us to also offer a most complete collection of all American grown seeds of Hardy Plants and Rock Plants.

 Several more varieties could be added to the list presented here, but we have omitted them because they are too difficult to handle for the amateur. The selection offered should give no great trouble to anyone who will be careful, but we cannot and do not give any guarantee as to results, knowing only too well that it requires more time, patience and care to raise hardy plants and rock plants from seeds than a great many people are willing to give. If, however, it is proven that failure is due to the seeds, we will replace them with others, without charge.

 Many seeds offered are not only rare but scarce, therefore, send your order early.

The wonderful successes which many of our correspondents have achieved in growing Roman Hyacinths, Freesias, Narcissi, Tulips, Dutch Hyacinths, Lilies-of-the-Valley, and other bulbs in Wayside Gardens Bulb Fiber in bowls without drainage, proves that this is one of the most charming and effective methods of growing bulbs. Those who have neither a large garden, nor the convenience of greenhouses, or frames, or who have a difficulty in obtaining suitable soil find most of their troubles removed in adopting this modern method of growing bulbs in the house. It will be extensively adopted in the future when it is fully realized what excellent results may be obtained in this way.

The advantage of this system is that the bowls, having no drainage holes, can be placed anywhere about the house without fear of any mess or damage to furniture. Wayside Gardens Bulb Fiber is perfectly odorless and clean to handle; it is specially prepared for the purpose of growing a great variety of bulbs in the house. Leaves no dirt or stain. It can be used for several years.

50c per 1/2 pk.; 90c per pk.; $1.75 per 1/2 bu.

For collections of bulbs for bowl culture and complete instructions, see special insert in the back of this catalog.

Red Arrow Insect Spray
Kills all plant pests. The most highly concentrated pyrethrum insect spray on the market.

Red Arrow is an exceedingly powerful non-poisonous insecticide, especially adapted to agricultural and horticultural purposes, both under glass and in the open. Very effective against insects in poultry house, kennel, and dairy barn. Also deadly for worms, beetles, and mound insects.

Does not burn or stain flowers, leaf or fruit. When used on fruits and vegetables it eliminates washing because with Red Arrow there is no poisonous residue.

Red Arrow is as nearly a perfect spray as you can buy because every drop will kill 100% of more varieties of insects than any other non-poisonous insecticide. Deadly to insects—but harmless to children, pets, valuable wild bird life and soil.

Red Arrow is pleasant and easy to use. It has no dangerous fumes or unpleasant odors and needs only to be mixed with water.

New Garden Trowel
Wayside Gardens Model.

This garden trowel was designed by us in the nursery where each year more than 3½ million plants must be set out. It is of great importance to have a perfect tool. This yearly task of planting must be done without getting a tired wrist, blisters or cramped fingers, and above all it must dig the proverbial "dollar hole for a 5c plant," a good sized hole that will hold all the roots without cramming. The result is this new trowel. Smooth, solid wooden handle (painted red so you won't lose it), short shank to prevent tired wrist. Short, sharp, wide blade for easy digging of wide hole. When you are all through with the 5 and 10c store variety, try this one. 65c each, postpaid.

Perfect Garden Label

The Perfect Garden Label is inconspicuous. The beautiful cool gray-green color blends with the soil, foliage and rocks. Only the marking space shows. If you wish the labels hidden they may be almost buried out of sight and lifted only for reading. The markings will be completely legible.

With an ordinary lead pencil write or print on the ample horizontal marking space of a Perfect Garden Label.

One year, two years, three years, four years afterward, at any time, you will be able to read easily every character of your marking.

Previous markings can be readily erased at any time with a stiff pencil eraser and the label can be used again. The marking space is large enough for three or four lines of writing or even display printing. The under side of the marking space can be used for extensive notes.
