LIST OF ABBREVIATIONS

Abbreviations are used in addresses only where they are a secondary part of the address, as in the case of states or provinces. Two exceptions to this are the consistent use of U.S.A. and U.S.S.R. The names of some governmental organizations which are customarily written as initials (e.g., WVINGI) are written out in full whenever we could learn the full name. The unknown abbreviations are not listed here.

INTRODUCTION

RESPONSIBILITY

The Directory of Zoological Taxonomists was started in October 1956 at the instigation of the National Science Foundation and with funds provided by the Foundation. The grant was later extended for a third year, but a fourth year was found necessary and was financed by the Society of Systematic Zoology.

All details of coverage, procedure, and style were determined by the compilers. Many situations called for novel solutions, and no model was found which could be followed for the many problems of alphabetization, diacritic marks, arrangement, format, abbreviations, symbols, and so on.

Publication was handled by the Southern Illinois University Press. This did not include composition, as the final typescript prepared by the compilers was used directly to produce the offset-lithography plates for printing.

COVERAGE

At the beginning, the compilers, with approval of the Society of Systematic Zoology, decided that coverage should be world-wide and should include specialties on fossil animals (paleontologists). Although it had originally been suggested to us that inclusion should be limited to "qualified" taxonomists, it was at once evident that there is no way to determine the qualifications of 9000 candidates. It was therefore decided to include all who submitted appropriate data, as well as those recom-

X DIRECTORY OF ZOOLOGICAL TAXONOMISTS

mended to us who failed to respond to our questionnaires. At least two requests were sent to every possible taxonomist known to us.

Obviously the initial coverage was most complete for North America. Western Europe and Japan became reasonably well covered because of ready response from most workers in these areas. The rest of the world was more difficult to reach. Eastern Europe and the U.S.S.R. were unrepresented in early lists, but, during the third and fourth years of compiling, a great many workers in these areas became known to us, and most of these returned data on their specialties. Only the People's Republic of China remains virtually unrepresented in this list.

Early coverage was also inadequate for workers on fossil animals. Paleontologists have often inclined to consider themselves geologists rather than zoologists, and they were slower to co-operate than the neontologists. The very timely help of Mrs. Katherine Van Winkle Palmer of the Paleontological Research Institution, at Ithaca, New York, gave the real start in this field and enabled us to include a substantial number of paleontological taxonomists.

PREPARATION

The manner of preparation of the Directory may be of interest to persons attempting to understand its purposes and limitations. The following major steps were followed: (1) The available lists of specialists and society members produced a list of prospective taxonomists, largely American, with the general field of their specialization. Preliminary lists were made from these for each class, order, or phylum. (2) Each person on this list was then sent a card requesting data about his specialty, his mail address, and his institutional connection, along with a copy of the appropriate preliminary lists. These he was asked to annotate with additions from all parts of the world. (If no reply was received, a second notice was sent.) (3) All persons reported to us in the response to the above were immediately sent invitations to submit data and other names. (4) As soon as the response in a group warranted, a new preliminary list for that group was prepared and included with invitations to those subsequently reported to us. (5) After two years of mailing to all persons suggested to us or listed in any of the numerous specialized directories that became known to us, the personal data received were filed in two ways, alphabetically by taxonomist and systematically by the groups of animals. (6) From this file, augmented daily by late returns, a manuscript was typed using a format designed to save space but present the maximum information. This manuscript was proofread against the original cards. (7) From this typescript was prepared the final pages of the Directory on a special typewriter, for photographic printing. This second typescript (as seen in the printed pages) was proofread against the first. The numerous diacritic marks, the proportional spacing, the variety of languages, and the extreme variety of spellings and capitaliza-

tion made this final typescript a very tedious job. Corrections were made in this manuscript up to the time of going to press. (8) The data filed by specialties had to be checked in detail against the specialties listed under each name, and they had to be kept up to date to the time of final typing. The filing arrangement had to be such that an adequate subdivision of specialties could be shown, with reasonable uniformity for clarity of use, but without undue waste of space. (9) A preliminary manuscript was then typed and checked back against the cards. (10) From this a final typescript was made on the special typewriter for photographic printing. This was proofread against the previous draft. (11) During the final typings, a considerable number of late replies, corrections, death notices, etc., reached us. Many were incorporated into the final manuscript, but some could not be. These were assembled into a list of Addenda, to be printed as a supplement. Only such persons as could be added to the systematic section were put in this Addenda. A few others will be accumulated for a separate Supplement, which may be published elsewhere at a later date.

ARRANGEMENT

The systematic section is arranged by phyla and classes. The order of these phyla follows closely the recent classification of Hyman (1940–1959), but for convenience of reference a list is given below. The classes are in alphabetical order. The term class is not to be taken strictly, as some groups are admitted as classes here for convenience which might be given higher or lower rank in a formal classification. In a few phyla the classes are omitted, and in certain classes the orders are also used.

Under each phylum are listed first the taxonomists who did not specify any specialty within the phylum, and those whose specialties include the entire phylum. These are grouped under side-headings that indicate either geographic restrictions, ecological limitations, or paleontological distribution. Taxonomists are listed under each heading in alphabetical order (all alphabetizing is by the first capital letter), with parenthetical indication of further restriction of specialty, if this is known. Three sets of abbreviations are used: (1) geological time periods, (2) zoogeographical regions, and (3) general ecological habitats. In this way restrictions of the specialties can be shown by the side-headings and the parenthetical notes together. The abbreviations are always in the following order: Under all headings small letters come first and indicate the following:

b, benthic	p, parasitic
bw, brackish-water	s, soil-inhabiting
fw, fresh-water	t, terrestrial
m, marine	

Under all headings except "Fossils," the capital letters, alone or following the small letters after a colon (:) show the zoogeographic realm or realms. These are:

A, Australian	Nt, Neotropical
AO, Atlantic Ocean	O, Oriental
Ant, Antarctic	Oc, Oceania
Arc, Arctic	P, Palearctic
E, Ethiopian	PO, Pacific Ocean
H, Holarctic	Trop, Tropics of World
N, Nearctic	W, World

Under the headings "Fossils" the first capital or the first group separated by commas shows the geological period or subdivision, as follows:

C, Cenozoic	Q, Quaternary
M, Mesozoic	R, Recent
P, Paleozoic	T, Tertiary

XIV DIRECTORY OF ZOOLOGICAL TAXONOMISTS

The second group of capitals (after the colon) shows the zoographic realms as above.

The colon (:) separates either the ecological from the geographical or the paleontological from the geographical. Where the colon is present, it is always followed by the geographical abbreviations (or by a question mark).

Examples: "Fossils: Doe, J. (P:?) " means Paleozoic with geography unspecified. "Fossils: Doe, J. (P-M)" means Paleozoic to Mesozoic. "Fossils: Doe, J. (T:N)" means Tertiary of Nearctic. "Parasites of mammals: Doe, J. (m:W)" means marine (mammals) of World. "Euglenoidina: Doe, J. (N, P, E)" means Nearctic and Palearctic and Ethiopian.

Thus, the small letters always show ecology. The final letter or letters, if there is a colon, always show the geography. The first of two groups of capitals separated by a colon always shows the geological range. A capital or group of capitals (with hyphen or commas) show geography unless the heading is "Fossils," when they show the geologic period.

Inasmuch as the limits of some of the regions and time zones had to be arbitrarily set, the extent of each is given here. (It is not intended to imply that these are the "correct" limitations, — merely that they are the ones used herein.)

WORLD, of course, covers all land areas or all oceans.

NEW WORLD, includes Nearctic, Neotropical, and surrounding seas.

OLD WORLD, includes Palearctic, Ethiopian, Oriental, Australian, and Oceania.

TROPICS, includes all regions except Nearctic, Palearctic, Arctic, and Antarctic.

HOLARCTIC, includes Nearctic, Palearctic, and surrounding seas.

NEARCTIC, includes America north of Mexico, Greenland, and surrounding seas.

NEOTROPICAL, includes Mexico, Central America, South America, and the West Indies, with surrounding seas and islands.

ATLANTIC OCEAN, from European and African western shores to eastern shores of America, from the Arctic to the Antarctic. (Includes oceanic islands therein.)

PALEARCTIC, includes Europe, North Africa to the Tropic of Cancer, Arabia, the Near East, Iran, Afghanistan, Asia north of the Himalayas, China north of the Yangtze, and Japan, with included and surrounding seas and islands.

PALEOTROPICAL, includes Ethiopian, Oriental, Indian Ocean, Australian, Oceania, and Pacific Ocean.

ETHIOPIAN, Africa south of the Sahara Desert, Madagascar, with surrounding seas.

ORIENTAL, includes Pakistan, India, southern China, and south to Singapore, the Malay Archipelago to Wallace's Line, the Philippines, and Taiwan (Formosa).

INDIAN OCEAN, from southern Asia to the Antarctic and from Madagascar to Australia, with included islands.

AUSTRALIAN, includes Australia, Tasmania, New Zealand, and surrounding seas.

OCEANIA, the islands from Wallace's Line east to Easter Island, from New Guinea and the Tuamotu Archipelago to the Hawaiian and Mariana Islands.

PACIFIC OCEAN, the entire sea area from Alaska to the Antarctic and from the Asian coast to the west coasts of America. (Terrestrial animals would be cited as Oceania.)

ARCTIC, the circumpolar seas north of the Nearctic and Palearctic, sometimes including Greenland, Iceland, and the northern edges of Asia and America.

ANTARCTIC, the continent of Antarctica and surrounding seas and islands.

PALEOZOIC, includes Cambrian through Permian periods, with some Karroo (Permo-Triassic) included.

MESOZOIC, includes Triassic, Jurassic, and Cretaceous, with some Karroo (Permo-Triassic) included.

CRETACEOUS, occasionally separated from the rest of the Mesozoic for convenience.

CENOZOIC, the Tertiary and Quaternary together.

TERTIARY, the Paleocene, Eocene, Miocene, Oligocene, and Pliocene together.

QUATERNARY, the Pleistocene and Recent together.

RECENT, used only to extend the interest in fossils to include an interest in the forms living at the present time. (After another period and a hyphen, simply extends the range of interest up to the Recent.)

It must always be remembered that the regions cited in this section are often very much larger than the ones cited in the specialty. For example, P (Palearctic) may actually mean only Japan. The groups are also often much larger than those actually studied. And the geological range is very often too great, as most paleontologists specialize more narrowly than could be shown by P (Paleozoic) or M (Mesozoic). Limitations must always be checked in the Address section.

There are a few special decisions to be noted in these citations of specialties. (1) The general heading of Invertebrates-Fossils includes fossil Foraminifera and other Protozoa, as it was found to be impossible to separate the two. When a reply was received, the specialist is of course listed only under the group he cited. (2) Many of the geographic areas cited included the note "and surrounding regions." These could not be shown. (3) Localities in Germany (West) and the Deutsche Demokratische Republik (East) are kept distinct whenever possible. In a few cases we were unable to identify the locality and had to leave it as Germany. (4) Nationalist China is listed as Taiwan (Formosa) to keep it distinct from the communist People's Republic of China.

The arrangement of subdivisions under each "class" is in three groups. First come general headings: names for which no further data are available, ecological groups, immature stages, and fossils not specified further. Second come the groups within the "class" but above the rank of family. These are generally in alphabetical order, regardless of rank, and little attention is paid to the form of the name, which varies greatly among taxonomists. Third come all the families of the "class" which were listed by any taxonomists; these are again alphabetical, with ecology or fossil range shown either by sub-headings or by parenthetical codes. To emphasize these three groups, the group names are capitalized, the miscellaneous headings and the families are in small letters.

The alphabetical address section contains the names of all persons who submitted appropriate data and all those others who failed to respond but who were represented to us as being taxonomists. The names of these latter persons are preceded by an asterisk (*). The asterisk thus indicates the persons whose address and specialty were not verified by them. Two requests or more were sent to each of them, so there is a good chance that these addresses are no longer correct.

Two other classes of names are included in this alphabetical listing. Persons whose names were submitted as taxonomists but who replied that they do not have an interest in any group of animals were omitted, but those who reported that they have permanently given up taxonomic studies are listed as "Not now active in taxonomy." This is done for the benefit of persons who might not be aware of this change of activity.

XVI DIRECTORY OF ZOOLOGICAL TAXONOMISTS

Persons who were suggested to us as taxonomists but who were later found to be deceased were listed in proper order with an indication of address and specialty and the date of death, if known. To have omitted these would simply have been to further obscure the fact of their demise.

A few persons in these last two groups had already been included in the final typescript. The new status was added or placed in the Addenda, with an arrow for cross-reference.

All names of those who replied are written in the exact form which they specified as their preference, including capitalization, diacritic marks, spacing, prepositional prefixes, and titles. All unusual spellings were checked directly with the person involved.

These names are alphabetized according to the only rule which was found to suit the requirements: All names are alphabetized by the first capital letter. Spaces in the name are ignored, as well as apostrophes and hyphens. Where two or more last names of exactly the same spelling occur, they are arranged by the initials only of the first names. Thus, SMITH, John D. comes ahead of SMITH, James P. This is the only way that names can be arranged when either initials or full first names are used indiscriminately. This alphabetical section is designed as a detailed source or cross-reference from the systematic section. There, only the initials are given, so only the initials are used in alphabetizing.

Addresses are given as specified by the taxonomist except for the following considerations: (1) the order of items is always Street-city-country or institution-city-country; (2) cities are always spelled as in the *Dictionnaire des Bureaux de Poste* of the Union Postale Universelle; (3) countries are listed in the form used in the United States Official Postal Guide, Part II, International Service, as there is no accepted international source. The local spellings are often unsuitable outside of the country.

If the institution with which the taxonomist is connected is not shown in the mail address, it is cited in brackets after the taxonomic specialty.

The taxonomic specialties are listed as nearly as practicable in the manner reported by the taxonomist. Each group of animals is cited by the name which he employed, unless there is a conflict of usage of synonyms, restricted by appropriate adjectives. To these are prefaced the phylum, class, or order, wherever necessary. In a very few cases the taxon cited proved to be unidentifiable by us and is enclosed within quotation marks.

The geographic limits and geologic time spans are indicated with as much detail as we received, with a minimum of standardization and few abbreviations.

Most taxonomists who responded gave an answer to the question whether or not they are willing to make identifications for other people in each of the groups listed. The replies are "Yes," "No," and in a very few cases "Fee" (a fee to be charged for the service) or a statement of dollars per hour as fee. The "Yes" must not be construed as permission to send specimens without prior correspondence. It is often qualified in additional ways which we are unable to record.

A small arrow in the lefthand margin refers to additional listings to be found in the addenda section at the end of the book. If the arrow points between two entries, there will be found a new entry that would be inserted at that point. If the arrow points directly at a name, additional or later information on that name will be found in alphabetical order in the Addenda section.

ACKNOWLEDGMENTS

The number of persons who have substantially helped in the compilation of data is so great that any listing would be impractical. We do acknowledge with gratitude the many lists, corrections, and suggestions sent by many taxonomists. Many institutions, societies, and individuals sent copies of directories or lists of specialists in

many fields. These will be acknowledged separately in a list of such directories that we plan to publish elsewhere. We have depended very heavily upon such lists at one stage, and we express our thanks to those whose hard work produced them.

The exacting work of typing the final copy for photographing, and inserting the numerous changes up to the last minute, was ably accomplished through the skill of Mrs. Gloria Stokes of Carbondale. Her continuing efforts have literally made the publication possible.

SYSTEMATIC LIST

NOTICE

ALL USERS OF THIS DIRECTORY ARE CAUTIONED NOT TO INTERPRET THE (YES) AS PERMISSION TO SEND SPECIMENS WITHOUT PREVIOUS CORRESPONDENCE. IN MANY CASES WILLINGNESS TO IDENTIFY IS LIMITED TO SMALL LOTS OF SPECIMENS THAT ARE PROPERLY PREPARED AND WELL SORTED, AS WELL AS TO MATERIAL THAT IS INTENDED FOR USE IN OTHER STUDIES OF THE ANIMALS.
