LIBRARY
NEW YORK
BOTANICAL
GARDEN

WHEN I, in the Year 1779, published the *Sexual System* of Linnæus, in Octavo, I then promised to give in, the following Year, the TERMINI-BOTANICI, viz. RATIFICATION, RAMIFICATION, FOLIATION, GEMMATION, &c. &c. of Linnæus, in Figures, in like manner as has been given in the *Sexual System*; but being by a particular Engagement prevented from the fulfilment of that Promise 'till the present Time:—I flatter myself, that a faithful delineation of each Term, from a Subject of Nature, that has, and expresses, the character of the Terms, will convey a more easy and accurate conception to the Mind of the Student and Lover of Botanic Science, than a verbal Description only.

It was found necessary to retain the Latin Terms of Linnæus, but to give them an English termination, with an Explanation of each Term, which it is hoped, will make it easy and familiar to the English Reader.

GIVEN BY THE AMERICAN
MUSEUM OF NATURAL HISTORY 1934

I doubt

P R E F A C E.

I doubt not but some Critic will, and may, find fault; in answer thereto I recommend the old Adage, (*nosce de ipse*) and it is easier to find Faults than to mend them: I hope the candid and unprejudiced Reader will look upon the few Errors with an indulgent Eye.

Leaves, are to be considered in three Respects,
SIMPLE, COMPOUND, and DETERMINATE.

SIMPLE LEAVES.

TAB. 21, 22, 23, 24, 25, 26.

They are when a Partial (Footstalk) bears only a single Leaf, which differs in Respect to its Circumscription as,

ANGLES, MARGIN, SUPERFICIES APICES and SUBSTANCE.

CIRCUMSCRIPTION, considers the Circumference without any Sinuses and Angles.

ANGLES, are the prominent Part of an horizontal Leaf.

SINUS, Hollows or Cavities that divide the Disk of a Leaf into Parts: c. g. Fig. 3. 16. 47. 61. 27.

MARGIN, is the extream Boundery of a Leaf or its Sides not including the Disk of the Leaf.

SUPERFICIES, the supine (upper Disk) or the Prone (under Disk) of a Leaf.

APEX, is the Extremity of a Leaf in which it terminates.

SUBSTANCE, of a Leaf is to be considered according to the Condition of its Sides.

SIMPLE LEAVES.

DEPRESSUM. Fig. 29. Depressed.	{ <i>Mesembryanthemum difforme</i> . Fig-Marigold with deform'd Leaves.	{ When in the Disk is depressed, and the Sides rising higher than the Disk.
DOLABRIFORME. Fig. 30. Dolabriform.	{ <i>Mesembryanthemum dolabriforme</i> . Hatchet-shaped, Fig-Marigold.	{ Compressed, subrotund, obtuse; on the under Side roundish; (resembling an Axe or Hatchet.)

SIMPLE LEAVES.

- ECHINATUM. { *Ilex echinatum.* } Befet all over with
 Fig. 31. { Hedge-hog Holly. } Aculi or Prickles,
 Echinated. like an Hedge-hog.
- ELLIPTICUM. { Fig. 59. } Whose longitudinal Diameter fur-
 Elliptic. passes the Transverse, and narrow
 at both Extremities.
- EMARGINATUM { Fig. 24. 32. 33. } When the Apex termi-
 Emarginated. nates in a Notch.
- EMARGINATUM { *Pinus picca.*
acutum Fig. 32. } Silver Fir.
 Acutely emarginated.
- EMARGINATUM { *Hermannia alnifolia.*
obtusum. Fig. 33. } Alder-leaved Hermannia.
 Obtusely emarginated.
- EMARGINATUM. { *Hydrocodile vulgaris.* } When notched all
utrinque. Fig. 34. } round.
 Allround emarginated. Water Navel-wort.
- ENSIFORME. { *Aletris uvaria.* } Like a two-edged
 Fig. 35. } Sword, gradually ta-
 Ensiform. pering to the Point.
- EROSUM. { *Salvia Æthiopis.* } When a sinuated Leaf
 Fig. 36. } has its Margin broken
 Erosc. } by smaller Sinuses, as
 if gnawed.
- FISSUM. { Fig. 32. 7. } Divided at the Apex, its Sinus be-
 Cloven or cleft. ing linear and the Margin straight.
- BIFIDUM. { Fig. 21. 7. } Trifid, quadrifid, quinquifid, mul-
 Bifid tifold, according to its Numbers.
- GIBBUM. { *Cacalia ficoides.* } When by Means of the
 Fig. 37. } intermediate Pulp
 Gibbous. } both Surfaces are ren-
 dered convex.
- GLABRUM. { *Citrus aurantium.* } When the Surface is
 Fig. 38. } smooth without any
 Smooth. } Uneveness.
- HASTATUM. { *Cacalia suaveolens.* } Triangular, the lateral
 Fig. 39. } base hollowed, the
 Hasted. } Angles spreading: re-
 sembling an Halberd.

SIMPLE LEAVES.

HIRSUTUM. Fig. 40. Hirsute.	{ Alcea rosea. Holly hog.	} Rough and hairy in the Disk.
HISPITUM. Hispid.	{ Fig. 25.	} Covered irregularly with fragil Bristles on the Disk.
INTEGRUM. Integer or Intire.	{ Fig. 38. 41. 51. 55.	} Where the Margin is intire, without any Crenes or Notches.
LÆVIS. Fig. 41. Smooth.	{ Orchis latifolia. Broad-leaved Orchis.	} When the Superficies is smooth without any Uneveness.
LACERATUM. Fig. 42. Lacerated.	{ Senecio hierachifolia. American Groundfel.	} Whose Margin is variously cut with irregular Segments: (as if rent or torn)
LANATUM. Lanated.	{ Fig. 36.	} Covered as with a Spider's Webb.
LANCEOLATUM. Fig. 43. Lanceolated.	{ Apocynum-cannabinum. Dogs-bane.	} Is oblong, but gradually tapering towards the Extremity, and terminating in a Point.
LACINATUM. Fig. 44. Lacinated.	{ Delphinium elatum. Bee Larkspur.	} Divided first into Laciniae and those again irregularly cut into smaller Segments.
LINEARE. Fig. 45. Linear.	{ Amaryllis belladonna. Belladonna.	} The lateral Margins parallel, narrowing a little towards the Apex.
LINEATUM. Lineated.	{ Fig. 13.	} The Superficies slightly streaked longitudinally with parallel Lines, not impressing the Surface
LINGUIFORME. Fig. 46. Linguiform.	{ Aloe disticha. Distich Aloe.	} Is linear and carnos, obtuse on the under Side convex; sometimes the Margin is cartilaginous: (Tongue shaped.)
LOBATUM. Fig. 47. Lobated.	{ Acer compestiris. Common Maple.	} Is divided to the Middle into distant Parts, having their Margins convex.
Bilobum, trilobum, quadrilobum, quinquelobum, 2. 3. 4. 5. lobum, from its Numbers of Lobes.		
LUNULATUM. Fig. 48. Lunated.	{ Passiflora Muricuja. Passion-flower of Domingo.	} Subrotund hollowed, at the Base liked a Crescent. (Moon-shaped.)

SIMPLE LEAVES.

LUCIDUM.	{	<i>Laurus nobilis.</i>	{	Bright, shining, glossy;

SIMPLE LEAVES.

O V A L E. Fig. 59. Oval.	{ <i>Mamea Americana.</i> <i>Mame.</i>	} Whose longitudinal Diameter surpasses the Transverse, and is narrow at both Extremities
O V A T U M. Fig. 60. Ovate.	{ <i>Cassine Maurocenia.</i> South-Sea Tea.	} Whose longitudinal Diameter is longer than the Transverse, and the Segment of the Base circumscribing a Circle; the Apex of the same Form, but narrower.
O V A L E oblongum. Oblong oval.	{ Fig. 49.	} Its longitudinal Diameter is greater than the Oval.
O V A T U M. obversum. Fig. 61. Obverse, Ovate.	{ <i>Samolus valerandi.</i> Round-leaved Water Pimpernel.	} Whose Base is narrow, an ovate Leaf inverted.
P A L M A T U M. Fig. 62. Palmated.	{ <i>Passiflora cœrulea</i> Common Passion- Flower.	} A Leaf with several Divisions divided almost to the Base.
P A N D U R A T U M. vel. Panduriforme. Fig. 63. Panduriform.	{ <i>Rumex pulcher.</i> Fiddle Dock.	} Is oblong, broad below; narrowed at the Sides. (Formed like a Spanish Guittar.)
P A P I L O S U M. Fig. 64. Papilose.	{ <i>Mesembryanthemum chrysellinum.</i> Diamond Ficoidea.	} Whose Surface is covered with Dots or little Bladders,
P A P U L O S U M. Fig. 65. Papulose	{ Echium.	}
P O R A B O L I C U M. Fig. 66. Porabolic.	{ <i>Marubium pseudo-dic- tamnus</i> Baillard Marubium.	} Whose longitudinal Diameter exceeds the Transverse, and growing narrower from the Base upwards, is (nearly ovate.)

SIMPLE LEAVES,

PARTITUM.	{ Birpartite, tripartite, quadripartite, quin- quepartite, multipar- tite; from its Num- bers.	{ Fig. 44. 45.
Partite.		
PENTANGULARE.	{ <i>Geranium peltatum.</i> Peltated Cranes-Bill	{ With five prominent Angles surrounding the Disk.
Fig. 67. Pentangular.		
PERTU-LUM.	{ <i>Draconticum pertusum.</i> Perforated Draconti- um.	{ As if Holes were cut through the Disk.
Fig. 68. Perforated.		
PILOSUM.	{ <i>Hierachium pilosella.</i> Common creeping Moufes-Ear.	{ Covered with distinct long Hairs.
Fig. 69. Pilous.		
PINATIFIDUM.	{ <i>Centaurea calcitrapa.</i> Pinatifid Star-Thif- tle.	{ Is traversely divided into long horizontal transverse Laciniae.
Fig. 70. Pinatifided.		
PLANUM.	{ <i>Ruscus androgynus.</i> Broad leaved Ruscus.	{ Plain, flat, neither con- vex nor concave.
Fig. 71. Plaine.		
PLICATUM.	{ <i>Veratrum album.</i> White Hellebore.	{ When plaited like a Fan.
Fig. 72. Plicated.		
PRÆMORSUM.	{ <i>Chamerops milis.</i>	{ obtuse as if bitten off at the Apex.
Fig. 73. Præmorse.		
PULVERATUM.	{ <i>Auricula Pulverata.</i> Powdered Auricula.	{ Covered with a farina or mealy Dust.
Fig. 74. Pulverated.		
PUNCTATUM.	{ <i>Hypericum perforatum.</i> St. John's-Wort.	{ Besprinkled with hol- low Dots or Points.
Fig. 75. Punctated.		
QUADRANGULARIS.	{ <i>Equisetum campestris.</i> Corn Horse-Tail.	{ With four prominent Angles.
Fig. 76. Quadrangular.		
QUINQUANGULARIS.	{ Fig. 67.	
Quinquangular. or Pentangular.		
QUINQUELOBATUM.	{ <i>Acer Psidium platanus.</i> Sycamore Tree.	{ Having five Angles.
Fig. 77. Quinquelobus		

SIMPLE LEAVES.

RECTUM. Fig. 78. Straight.	{ Sarracenia Flava. Yellow Side-Saddle Flower.	} Straight, Stiff and Erect.
RENIFORME. Fig. 79. Reniform.	{ Afarum <i>Europæum</i> . Afarabacca.	} Subrotund, hollowed at the Base, without Angles (resembling a Kidney.)
REPANDUM. Fig. 80. Repanded.	{ Tropeolum <i>minus</i> Indian Crefs.	} Having a serpentine Margin without any Angles.
RETUSUM. Fig. 81. Retuse.	{ Clusia <i>flava</i> . Yellow clusia.	} Terminating in an ob- tuse Sinus.
RHOMBOIDEUM. Fig. 82. Rhomboid.	{ Sida <i>Rhomboideum</i> . Smaller upright Mal- low.	} Quadrangular, of which the two lateral Angles are least.
RUGOSUM. Fig. 83. Rugose.	{ Salvia <i>officinalis</i> Common Sage.	} From Contraction of the Veins the Sub- stance of the Leaf rises above the Veins, (less than Bullatum.)
RUNCINATUM. Fig. 84. Runcinated.	{ Leontodon <i>taraxacum</i> . Dandelion.	} Doubly and unequally ferrated, and the An- gles pointing contrary to the Serratures.
SAGITTATUM. Fig. 85. Sagittated	{ Sagittaria <i>sagitti folia</i> . Arrow Head.	} Triangular, hollowed at the Base, furnished with Angles.
SCABRUM. Fig. 86. Scaber.	{ Humulus <i>lupulus</i> . Hops.	} Beset with little Tu- bercles on the Disk, which are rough.
SERRATUM. <i>acutum</i> . Fig. 87. Acutely ferrated.	{ Mercurialis <i>perennis</i> . Dogs Mercury.	} Whose Margin is not- ched with imbricated Angles and whose shortest Side is next the Apex.
SERRATUM. <i>obtusum</i> . Fig. 88. Obtusely ferrated.	{ Ballota <i>nigra</i> . Stinking Horehound.	} Its Angles obtuse.

SIMPLE LEAVES,

SERRATUM. <i>duplicata.</i> Fig. 89. Duple Serrated.	{ Rubus <i>fruticosus</i> . Bramble.	{ When the greater Ser- ratures are serrated again with smaller Teeth.
SERRATUM. <i>retrosum.</i> Serrated backward.	{ Fig. 84.	
SERICEUM. Fig. 90. Silky.	{ Protea <i>argentea</i> . Silver Tree.	{ The Surface remark- ably soft, covered with filky Hairs or Down.
SETACEUM Fig. 91. Setaceous.	{ Asparagus <i>officinalis</i> . Asparagus.	{ Shaped like Bristles.
SINUATUM. Fig. 92. Sinuated.	{ Quercus <i>robur</i> . Common Oak.	{ Whose lateral Sinuses are much dilated.
SPATULATUM. Fig. 93. Spatulated.	{ Sempervivum <i>canariense</i> . Canary Houseleek.	{ Whose Figure is roun- dish, but lengthened by narrow linear Base.
STRIGOSUM. Strigose.	{ Fig. 25. i. e. Hispidum.	
STRIATUM. Fig. 94. Striated.	{ Scirpus <i>maritimus</i> . Round-rooted Bastard Cyperus.	{ On its Surface with channelled Streaks or Grooves, running lengthways parallel.
SPINOSUM. Fig. 95. Spinus.	{ Acanthus <i>spinosus</i> . Prickly Bears-breach.	{ Running out into hard or rigid Spines or stinging Prickles.
SQUAMOSUM. Fig. 96. Squamos or Scaly,	{ Aloe- <i>disticha</i> Distich Aloe.	{ Covered with Scales;
STRICTUM. Straight.	{ Fig. 78.	

S I M P L E L E A V E S.

SUBROTUNDUM. Fig. 97. Subrotund.	{ <i>Rhus cotinus.</i>	} Nearly circular in the Circumference
SUBULATUM. Fig. 98. Subulate	{ <i>Mesembryanthemum bicolor.</i>	} Gradually tapering towards the Apex, shaped like an Awl.
SULCATUM. Fig. 99. Sulcated.	{ <i>Digitalis feruginea.</i> Greater Fox-glove.	} Which is longitudinally channelled with numerous Angles, and many interjected Sinuses.
T E R R E S. Round.	{ Fig. 103. 25.	
TOMENTOSUM. Fig. 100. Tomentose.	{ <i>Verbascum thapsis.</i> Great White Mullein.	} Covered with a whitish Down, whose Hairs are interwoven and parallel, distinguishable.
TRIANGULARE. Fig. 101. Triangular.	{ <i>Atriplex halamus.</i> Sea Purslain-Tree.	} With three prominent Angles round the Disk.
TRIGONUM vel. Fig. 102. Triquater. Three-sided.	{ <i>Butomus umbellatus.</i> Flowering Rush.	} Whose three Sides are equal in an awl-shaped Leaf.
TRILOBATUM. Fig. 103. Trilobus.	{ <i>Laurus saxifraga.</i> Carolina Bay.	} Is divided to the Middle into three distant Parts with the Margin convex.
TRUNCATUM. Fig. 104. Truncated.	{ <i>Lyriodendron Tulipe-fera.</i> Tulip Tree.	} Having the Apex truncated (as if cut off.)
TUBULOSUM. Fig. 105. Tubulous.	{ <i>Allium cepa.</i> Common Onion.	} When cut transversely is hollow within.

SIMPLE LEAVES.

VENOSUM.	{ Tamus <i>communis</i> .	} When Veins branch and meet over the Leaf and are plain to the naked Eye.
Fig. 106. Veinos.	{ Black Bryony.	
VISCIDUM.	{ Senecio <i>viscosus</i> .	} When the Surface of the Leaf is clammy or viscid.
Fig. 107. <i>Viscid</i> Viscosum.	{ Cotton or stinking Groundfel.	
UMBILICATUM.	{ Fig. 16. 80.	} When at the Insertion of the Peduncle of a Leaf, forming in the middle a Cavity like a Naval.
Umbilicated.		
UNCTUOSUM.	{ Fig. 107.	
Clammy or Unctuous.		
URENS.	{ Urtica <i>dioica</i> .	} Furnished with fragil Stimuli that are stinging or burning.
Fig. 108. Stinging.	{ Common Nettle.	
UNDULATUM.	{ Aletris <i>capensis</i> .	} Is when the Disk of a Leaf rises and falls convexly (or Waving) towards the Margin.
Fig. 109. Undulated.		
VENTRICOSUM.	{ Sarracenia <i>purpurea</i> .	} Narrowing at the End and swelling out in the Middle, hollow within
Fig. 110. Ventricose.	{ Purple Side-Saddle Flower.	

DETERMINATE LEAVES.

Their Character is not to be taken from their own proper Structure, but from a Cause foreign thereto; and is to be taken from their *Place*, *Situation*, *Insertion* and *Direction*.

The *Place*, is the Part where it is fastened to the Plant.

The *Situation*, is the disposition of the Leaves on the Stem.

The *Insertion*, Leaves are generally inserted at their Base.

The *Direction*, Leaves are generally inserted at their Base.

APPRESSUM.	{ <i>Thlaspi campestris</i> .	{ The Disk of Leaves

COMPOUND LEAVES.

Compound Leaves signify when there are more than one Leaf upon a Petiole or Footstalk; and they are to be considered as to *Structure* and *Degree*.

The *Structure* regards the Insertion of the Folioles.

The *Degree* regards the Subdivision of the common *Petiole*.

ARTICULATUM.	{	<i>Equisetum arvense.</i>	} When one Leaf grows out of the Apex of another.
Fig. 150.			
Articulated.		Corn Horse-tail.	

BIGEMINATUM.	{		} A dichotomous or forked Petiolus, having two Leaves on the Apex of each Division.
Fig. 151.			
Bigeminated.		<i>Mimosa-unguis cati.</i>	

BINATUM.	{		} Is one of the digitated Leaves with two Folioles only.
Fig. 152.			
Binated.		<i>Gypsophylla fabago.</i>	

BI-PINNATUM-ABRUPTUM.	{	<i>Guilandina pontucella.</i>	} When the Petiolus is pinnated by lateral pinnated Wings, ending without a terminating Foliole.
Fig. 153.			
Bi-pinnated-abrupt.		Yellow Nicker-Tree.	

BI-PINNATUM-CUM IMPARE.	{	<i>Guilandina discica.</i>	} Is when the Wings terminate with an odd Foliole.
Fig. 154.			
Bi-pinnated with an odd Foliole.		Canada Nicker-Tree.	

BITERNATUM.	{	Fig. 157.
Biternated.		

COMPOSITUM	{	<i>Ranunculus-bulbosus.</i>	} When a simple Petiole bears more than one Leaf upon it.
Fig. 156.			
Composite.		Crow-foot or Butter-cup.	

COMPOUND LEAVES.

CONJUGATUM. Fig. 157. Conjugated.	{ <i>Lathyrus latifolia.</i> Everlasting Pea.	} Is when two Folioles are on each Petiolus, but not more.
DECOMPOSITUM. Fig. 158. Decomposite.	{ <i>Ruta graveolens.</i> Rue.	} When a Petiolus once divided connects many Folioles on it.
DEFORME. Fig. 159. Deformed.	{ <i>Pæonia officinalis.</i> Piony of the Shops.	} When Folioles of different Figures are on the same Plant.
DIGITATUM. Fig. 160. Digitated.	{ <i>Vitis agnus-cajus.</i> Chaste-Tree.	} When more than one Leaf is connected at the Extremity of one Petiole.

P I S T I L L U M.

The *Pistillum*, a viscous Humour adhering to the Fruit for the reception of the Pollen, and is the Female Organ of Generation.

The *Germen* is the Embryo or Rudiment of the Fruit, yet immature.

The *Stylus*, is the Part that elevates the *Stigma* from the Germen.

The *Stigma*, is the Summit or apex of the Pistillum, covered with a Menstruous moisture, that breaks and dissolves the Pollen, and fits it for impregnation of the Germen.

A Cone.	{	Pinus <i>sylvestris</i> .	} A Pericarpium formed from an Amertum with hard Scales.
		Scotch Fir.	

S E M E N.

Seed, the Rudiment of a new Plant; are known according to the Number, Figure, Superfices and Consistence.

1. HILUM, the Eye, an external Scar of the Seed, where it has been fixed to the Fruit or Receptacle, as in the Bean.
2. CORCULUM, The Effence of a new Plant within the Seeds, c. b.
3. PLUMULA, a part of the Corculum, the ascending Scaly Part of the Plant.

ROSTELLUM, the descending part of the Corculum that forms the Root. (c.)

COTYLEDON, the side Lobes of the Seed, of a porous substance, and perishes (d.) Fig. 2, 3.

C O R O N A.	{	Dipsacus <i>fullonum</i> .	}	A little Cup, adher-
Fig. 4.				ing to the top of the
Crown.	{	Wild Teazel.	}	Seed, is deciduous.

P A P P U S.	{	Carduus.	}	A downy feathered
Fig. 5.				Cup, adhering to the
Pappous.	{	Thistle.	}	Top of the Seed, by
				which it flies.

STIPITATUS.	{	A kind of a thread like Trunk, elevating the
Fig. 6.		Down, and connecting the Seeds.
Stipitate	{	

A R I S T A T U S.	{	Helianthus <i>annua</i> .	}	Having two Ariste,
Fig. 7.				are deciduous.
Chaffy.	{	Annual Sun Flower.	}	

CAPILLARIS.	{	Hierachium <i>Pilosella</i> .	}	Simple undivided hairs
Fig. 8.				
Hairy.	{	Moufe-ear Hawkweed	}	

PLUMOSUS.	{	Cnicus <i>oleraceus</i> .	}	Feathery Hairs.
Fig. 9.				
Plumous.	{	Pale-flowered Cnicus.	}	

S E M E N.

C A U D A. Fig. 10. Tail.	{ Atragena <i>Alpina</i> . Alpine Atragena.	} Having a feathery tail,
N A M U S. Fig. 11. Nooked.	{ Daucus <i>carota</i> . Carot.	}
A R I L L U S. Fig. 12.	{ Euonimus <i>Europæus</i> . Common Spindle Tree	} The exterior Coat of a Seed falls off Spon- taneously. (a.)
A L A. Fig. 13. Wing.	{ Pinus <i>sylvestris</i> . Scotch Fir.	} A Membranaceous Wing, fixed to the Seed.
Fig. 14.	{ Platanis <i>Orientalis</i> . Oriental Palm Tree.	
N U X. Fig. 15. Nut.	{ Coryllus <i>Avellana</i> . Hazel Nut.	} A Seed, covered with a bony epitermus or Shell.

RECEPTACULUM.

The Receptacle is the Base, by which the Parts of Fructification are connected.

COMMUNE.	{	<i>Calendula officinalis.</i>	{	Containing many
Fig. 1.				Flowers and Fruit, as
Common.	{	Common Marigold.	}	also in Fig. 1, 2, 3.
PUNCTATUM.	{	<i>Leontodon Taraxacum.</i>	{	Marked with hollow
