PART II.

Vernacular—Botanical Names :—

Burmese Names 	185
Kachin Names 	285
Karen Names 	315
Shan Names 	319
Chin Names 	341
Talaing Names 	345
General Index 	349
Index to Natural Orders and Genera 	353

PREFACE TO THE FIRST EDITION.

IN Part I the order followed is that of the Flora of British India, except that the species are arranged alphabetically under each genus. Only those grasses have been entered in the list for which vernacular names are known to have been recorded. The names in the third column of this Part are Burmese where not shown as Kachin (Kc.), Karen (Kn.) or Shan (Sh.).

2. The vernacular names of other than well-known species should be accepted with caution ; many of them require further verification and probably correction of spelling in some cases. For instance the recognised system of transliteration does not appear to have been adhered to in the case of many names recorded in the Tenasserim Circle Office as obtained in the South Tenasserim Division. It will be noticed that many of the Burmese names are of a generic character, and it is probable that they apply to many more species of a genus than those for which they have been hitherto recorded. The present lists of vernacular names are necessarily far from complete, but it is hoped that they will encourage Forest Officers to collect more names, so that a more complete and reliable edition of the present work may be published hereafter. When any doubt exists about the correct botanical name of a species for

which a vernacular name is recorded, it is suggested that the only reliable method is to collect specimens at the same time and have them authoritatively determined.

3. The greater part of the list of Kachin names has been drawn up by Mr. G. E. S. Cubitt, Deputy Conservator of Forests, who has also rendered great help in checking Burmese names, and that of Shan names by Mr. G. R. Long, Officiating Conservator of Forests.

Most of the names from the Ruby Mines District were furnished by Mr. A. Rodger, Deputy Conservator of Forests, and useful lists of vernacular names were received from Mr. E. M. Buchanan, Extra Deputy Conservator of Forests, and Maung Tha Myaing, A.T.M., Extra Assistant Conservator of Forests. My best thanks are due to the abovementioned officers for the assistance they have rendered, as well as to Mr. C. B. Smales, Deputy Conservator of Forests, who has kindly read the proof of the lists and corrected many errors.

J. H. LACE,

*Chief Conservator of Forests,
Burma.*

CAMP, 23rd November 1912.

PREFACE TO THE SECOND EDITION.

THE late Mr. Lace, after his retirement from Burma in 1913, did a great deal of work on his collections at Kew, and began to write a Flora of the Maymyo Plateau. The present writer sent him many specimens collected in the forests of Burma, and Mr. Lace kept him informed during the five years before his sudden death in Devonshire, in June 1918, of the results of his work at home. Large collections have been made by forest officers and others, and by the writer, all over Burma, and many new vernacular names have been recorded, since the first edition was published, and the present edition embodies the results of all these investigations up to date. The number of species recorded in the first edition was 2,483, and the number in the present edition is 2,927. A note has been made (except in the case of grasses) in column 3 of Part I, indicating where the plant is known to occur. This, it is hoped, will make the List more interesting and useful. A general index and lists of Talaing and Chin names have been added. In looking up records at Calcutta and Maymyo, and in the standard works such as Sir Dietrich Brandis' "Indian Trees" and "The Forest Flora of British Burma" by S. Kurz, it is very striking to find on what slight foundations much of our knowledge of the forest plants of Burma is based. Some plants appear to have been

collected only once, perhaps a hundred years ago, and the necessity for a complete botanical survey of Burma is very evident, both from a scientific and from a commercial point of view.

The jungle Burman is as a rule extremely good at naming trees and shrubs, but the names often vary very much, between Myitkyina and Mergui, and all except the commonest names must therefore be accepted with caution.

The following notes on Burmese names may be useful to those who use this book:—

In and *Kanyin*, with modifications, represent a number of species of *Dipterocarpus*: *Kinbalin* is usually an *Antidesma*: *Karawe* means a Cinnamon: *Ngu* is a *Cassia*: *Nibasè* is almost always a *Morinda*: *Nwè* is a climber: *Nyaung* is a *Ficus*: *Tayaw*, *Petshat*, *Petwaing*, *Petwun*, *Taungpetwun*, *Petwungyi*, are used for trees and shrubs with rounded leaves like *Grewia*, *Eriolæna*, and *Macaranga*: the prefix *Pinlé* means that the tree is often found near the sea: *Taung* is prefixed to a name to indicate that the plant occurs mostly on the hills: *Pyaung*, with sundry affixes, means a tall grass: *Sabè* or *Tawsabè* is usually a *Jasmine*: *Sagat*, *Zagat*, *Nyan*, *Thitè*, *Thabeik*, *Metlein*, *Thitcha*, are common names for Oaks and Chestnuts: *Thinbaw* before a name usually means that the plant has been imported from abroad: *Taw*, meaning forest, is prefixed to a name to show

that the wild plant resembles in some way a cultivated species: *Shaw* nearly always means a *Sterculia*: *Su* means that the plant is thorny: plants called *Thabut*, with modifications, usually belong to the *Anonaceæ*: *Thabye* is a common name for species of *Eugenia*: *Wa* means a bamboo: *Kyein* means a cane: *Tinyu* represents trees like *Casuarina* and *Pine*: *Yemein* is usually an *Aporosa*.

The writer is indebted to the following for much useful information and help:—

Lady Cuffe, A. E. English C.I.E., C. G. Rogers C.I.E., C. B. Smales, H. W. A. Watson, J. C. Hopwood, H. R. Blanford O.B.E., W. A. Robertson, A. H. M. Barrington, W. S. Powell, V. H. T. Fields-Clarke, A. P. Davis, J. W. Bradley, J. M. D. Mackenzie, R. A. Cochrane, L. C. Secluna, W. J. G. Cooper, A. J. S. Butterwick, G. M. Turner, R. E. Cooper, W. W. Smith, F. Kingdon Ward.

It is hoped that forest officers and others will continue to make botanical collections in the forest, and to record vernacular names, as there is still a great deal to be discovered.

A. RODGER,
Conservator of Forests,
Tenasserim Circle.

RANGOON, 20th November 1921.

LIST OF ABBREVIATIONS USED.

Part I, column 2.

T. = Tree.	TS. = Twining shrub.
ST. = Small tree.	PS. = Parasitic shrub.
S. = Shrub.	ES. = Epiphytic shrub.
C. = Climber.	

Part I, column 3.

A. = Dry or Arid zone.	P. = Planted.
B. = Burma, widely distributed.	S. = Sea-shore.
C. = Chin Hills.	SS. = Shan States.
H. = Hill forests, above 2,500 feet.	SSS. = Southern Shan States.
K. = Kachin Hills.	R. = River-beds.
L. = Lower Burma.	T. = Tenasserim.
M. = Martaban.	U. = Upper Burma.
N. = Naturalized.	W. = Run wild.
NSS. = Northern Shan States.	

R.M. = Ruby Mines District.	Kc. = Kachin.
S.T. = South Tenasserim.	Kn. = Karen.
My. = Myitkyina.	Sh. = Shan.
	Tg. = Talaing.

Shan Names.

Note.—The prefixes 'Tun' (a plant), 'Mai' (a tree or bamboo), 'Mak' (a fruit) and 'Mawk' (a flower), are very common and also to some extent variable and interchangeable. They have therefore been eliminated in arranging the names alphabetically, but the prefixes in common use are given after the names in brackets.
