ABSTRACT

Notes on the names of the Sphingidae are arranged in a **twelve-part catalogue**. **Part I** is an alphabetic list of the Type-Genera of the Family-Group names. **Part II** is a synonymic list of the Family-Group names. **Part III** is an alphabetic list of the Genus-Group names, including data on authorship, place of publication, type-species, method of type-species designation and position in the classification. **Part IV** is a synonymic list of the Genus-Group names. **Part V** is an index to the authors and bibliography of the Genus-Group names. **Part VI** is an alphabetic index to the Type-Species of the Genus-Group names. **Part VII** is an alphabetic list of the Species-Group names, including data on authorship, place of publication, type locality, location of type specimens and classification. **Part VIII** is a synonymic list of the Species-Group names. **Part IX** is an index to the authors and bibliography of the Species-Group names. **Part X** is the bibliography, including information on the author's place and date of birth and death, and on the whereabouts of their collections. **Part XI** is an index to the bibliography by journal title, including the full titles of the journals and serials, and information on their places and dates of publication. **Part XII** is an index to the bibliography by year of publication. **Appendix I** is a list of Genus-Group names that need work. **Appendix II** is a list of Species-Group names that need work. **Appendix III** is a list of Bibliography citations that need work.

The arrangement of the names is based entirely on bibliographic references. No specimens have been examined, and no new names are introduced.

INTRODUCTION

Zoological nomenclature is the system of scientific names applied to taxonomic units of animals, while the International Code of Zoological Nomenclature is the system of rules and recommendations governing the use of these names at the family-group, genus-group and species-group levels. It is consistent with the code to say that names may be objectively classified as either **available** or **unavailable**, the determination depending on the details of publication, etc. The **available** names may be further divided into **objectively valid** and **objectively invalid** names, and, in accordance with the Code, only the **objectively valid** names may be used for naming taxa.

GENUS-GROUP NAMES

In addition to the above **objective** classification of names, the **objectively valid** Genus-Group names may be further subjectively classified according to their use as names of genera, subgenera or unused synonyms. When a name is used for a generic- or subgeneric-level taxon it is said to be validated at the generic- or subgeneric-level, while if it is considered to apply to a taxon which has an older valid name, it is said to be invalidated as a junior subjective synonym.

In this catalogue the genus-group names are assigned one of the five letter codes [a-e] according to their status as **available/unavailable**, **objectively valid/invalid**, and depending on their use as the name for a genus, subgenus, or as an unused synonym, as defined by the following table.

Table I - Definition of Status Letter Codes [a-e]					
Letter code	Nomenclatural status (objective)	Subjective use	Print	Indentation (in Part IV)	Number of names
a	Available, Valid	Genus	Bold	1 em	204
b	Available, Valid	Subgenus	Bold	2 em	0
c	Available, Valid	Synonym	Bold	3 em	79
d	Available, Invalid	Unused	Light	4 em	87
e	Unavailable	Unused	<i>Italics</i>	5 em	73

Note that subgenera are not employed in the Spingidae.

SPHINGIDAE

SPECIES-GROUP NAMES

Like the Genus-Group names, the **objectively valid** Species-Group names may be further subjectively classified according to their use as names of species, subspecies or unused synonyms. When a name is used for a species- or subspecies-level taxon it is said to be validated at the species- or subspecies-level, while if it is considered to apply to a taxon which has an older valid names, it is said to be invalidated as a junior subjective synonym.

In this catalogue the species-group names are assigned one of the five letter codes [a-e] according to their status as **available/unavailable**, **objectively valid/invalid**, and depending on their use as the name for a species, subspecies, or as an unused synonym, as defined by the following table.

Table III - Definition of Status Letter Codes [a-e]

BASIC LITERATURE

Journal titles have been checked in the *World List of Scientific Periodicals*, [b1419a], and this data is included in Part XI. Bibliographic information on the authors has been found in Gilbert, 1958 (*A Compendium of the Biographical Literature on Deceased Entomologists*, [b0559]), Carpenter, 1945 & 1953 (*Bibliography of Biographies of Entomologists*, [b0262 & b0263]), Horn and Schenkling, 1928 (*Index Litteraturae Entomologicae. Serie I*, [b0703a]) and Derksen and Scheiding-Göllner, 1965 (*Index Litteraturae Entomologicae. Serie II* [b0400a]). The basic list of names was taken from D'Abrera, 1986 (*Sphingidae Mundi* [b0444]), and from the Zoological Record.

PUBLICATION DATES OF GENUS-GROUP AND SPECIES-GROUP NAMES

The 10th edition of Linnaeus' *Systema Naturae* [b0891] marks the beginning of the consistent general application of binomial nomenclature in zoology. The date 1 January 1758 is arbitrarily assigned to that work, and taken as the starting point of zoological nomenclature. The following tables gives the number of names published in each 10-year interval from 1758 to the present. The data are broken down according to the nomenclatural status of the names, represented by the status codes [a-e], as previously defined.

MUSEUMS WITH TYPE SPECIMENS

The following list gives data on the location of type specimens, taken from various sources. Since only 964 entries in the catalogue include information about the type specimen, it can be seen that the table is far from complete. Acronyms for museum names have, in general, been taken from Heppner and Lamas, 1982 (*Acronyms for World Museum Collections of Insects, with an Emphasis on Neotropical Lepidoptera*, [b0674a]).

Introduction

CLASSIFICATION

The higher classification is that of Hodges [b0683]. However, since Hodges deals only with the North American genera, many genera have been placed only to the subfamily level. I have included, in Part III, a key to the classification used by Rothschild & Jordan [b1162].

SPELLING

The species-group names are spelled, in general, in the same way as they were spelled in the original descriptions. No attempt has been made to correct the termination of Latin or latinized adjectival or participial species-group names to agree in gender with the generic names they are currently associated with.

PART II
SYNONYMIC LIST OF FAMILY-GROUP NAMES

INTRODUCTION

In this section the Family-group names are arranged in a synonymic list. The family-group names are printed 'bold' if they are objectively valid, printed 'light' if they are objectively invalid, and in '*italics*' if they are unavailable. Names preceded by a '+' are considered synonyms (subjectively invalid) and are not used in the classification. The standard endings for Family-Group names are taken to be -oidea (superfamily), -idae (family), -inae (subfamily), -ini (tribe) and -iti (subtribe).

PART IV
SYNONYMIC LIST OF GENUS-GROUP NAMES

INTRODUCTION

In this section the Genus-group names are arranged in a synonymic list. The genus-group names are printed 'bold' if they are objectively valid, printed 'light' if they are objectively invalid, and in 'italics' if they are unavailable. Each group is preceded with a key to the higher classification which can easily be read with the help of Part II. For example, *Aellopos* is in the group headed Sph:Sph:Mac:Dilophonotini, which can be read as Superfamily Sphingoidea, Family Sphingidae, Subfamily Macroglossinae, Tribe Dilophonotini. The only known fossil genus is listed at the beginning of the list. However some additional information about its placement can be found in Part III. The correct position of some genera is not known, and these have been placed in groups with incomplete headings. For example, the placement of *Acosmerycoides* is not known to the tribal level, so it is placed under the incomplete heading Sph:Sph:Mac:.

ABBREVIATIONS

The following abbreviations are used in this section.

H.....	Homonym
ICZN.....	International Commission on Zoological Nomenclature
IOS.....	Incorrect Original Spelling
ISS.....	Incorrect Subsequent Spelling
JOS.....	Junior Objective Synonym
NN.....	Nomen Nudum
PD.....	Pending Decision (by the ICZN)
PS.....	Published in Synonymy
RC.....	Rejected by the Commission (ICZN)

PART V
INDEX TO BIBLIOGRAPHIC CITATIONS
FOR
GENUS-GROUP NAMES

INTRODUCTION

This section is straightforward and needs little introduction. It consists of an index to all those publications which contain original descriptions of Genus-group names, original descriptions of Type-species of Genus-group names or valid Type-species designations of Genus-group names. The particular type of citation is indicated in the first column, where the status letter codes [a-e] are given if the citation is to the original description of a name, TS is given if the citation is to the original description of the Type-species, or TM is given if the citation is to the Type-species designation.

PART VII
SPECIES-GROUP NAMES

INTRODUCTION

In this section the species-group names are arranged in alphabetic order. If two names are spelled the same, they are ordered by date of publication, and if they have the same publication date they are arranged by the author's name.

ABBREVIATIONS

The following abbreviations are used in this section.

ab.....	aberration
CG.....	Current Genus
Dist:.....	Distribution
f.	form
H.....	Homonym
IFS.....	Infrasubspecific
JOS.....	Junior Objective Synonym
NN.....	Nomen Nudum
OD.....	Original Description
OS.....	Objective Synonym
PS.....	Published in Synonymy
Refs.....	References
SS.....	Subjective Synonym
Type.....	Type Locality

PART VIII
INDEX TO GENERA OF SPECIES-GROUP NAMES

INTRODUCTION

This section is straightforward and needs little introduction. The objectively valid names are shown in 'bold', the objectively invalid names in 'light' and the unavailable names in *italics*, and these differences are also reflected in the indentation level of the names. Generic names are shown without authorship, but this information is given in Part III. Keys to the higher classification are given for each genus. For example, *Aellopos* is keyed as Sph:Sph:Mac:Dilophonotini, which can be read as Superfamily Sphingoidea, Family Sphingidae, Subfamily Macroglossinae, Tribe Dilophonotini. Nominal species which are type-species are marked with a * if they are the type-species of the genus in which they are placed, or with a + if they are the type-species of a generic name which is in the synonymy of the genus in which they are placed.

ABBREVIATIONS

The following abbreviations are used in this section.

H.....	Homonym
ICZN.....	International Commission on Zoological Nomenclature
IOS.....	Incorrect Original Spelling
ISS.....	Incorrect Subsequent Spelling
JOS.....	Junior Objective Synonym
NN.....	Nomen Nudum
PD.....	Pending Decision (by the ICZN)
PS.....	Published in Synonymy

Acanthosphinx [Sph:Sph:Sph:]

- * *guessfeldtii* (Dewitz), 1879; Ambulyx
- *eothina* Tams, 1930

PART IX
INDEX TO BIBLIOGRAPHIC CITATIONS
FOR
SPECIES-GROUP NAMES

INTRODUCTION

This section is straightforward and needs little introduction. It consists of an index to all those publications which contain either original descriptions or selection of type specimens. For original descriptions the data is arranged into four columns, information on the type, status code, name and original genus and page citation. For type designations the first column is always blank and the status code is replaced by "T". The genus-group names used are those used in the original descriptions, not those in which the name is presently placed.

PART X
BIBLIOGRAPHY

INTRODUCTION

This section is straightforward and needs little introduction. Abbreviations used in journal titles have been taken from the *World List of Scientific Periodicals* [b1419a]. I have tried to provide the full names of the authors, and to give some information about where and when they were born and died, and what happened to their collections. This information has been taken from various sources, but the works of Gilbert, 1978 (*A Compendium of the Biographical Literature on Deceased Entomologists*) [b0559], Carpenter, 1945 & 1953 (*Bibliography of Biographies of Entomologists*) [b0262, b0263], Horn & Schenkling, 1928 (*Index Litteraturae Entomologicae, Serie I*) [b0703a] and Derksen and Scheiding-Göllner, 1965 (*Index Litteraturae Entomologicae, Serie II*) [b0400a] have been most helpful. In general papers with multiple authors are only listed under the senior author, but in cases where junior authors have published material which has nomenclatural implications (i.e. type-species selections), the paper is given a second entry.

The following papers were inadvertently omitted from the listing.

Derksen, Walter; Schelding-Göllner, Ursula;

b0400a 1965 *Index Litteraturae Entomologicae, Serie II: Die Welt-Literatur über die gesamte Entomologie von 1864 bis 1900*. Berlin. 5 Bände. I(A-E):697 pp; II(F-L):678 pp; III(N-R):528 pp; IV(S-Z):482 pp; V(Index):238 pp. *An indispensable reference for anyone interested in the bibliography of the Insects.*

Gaedike, Reinhard; Smetana, Oldřich;

b0514a 1978 *Ergänzungen und Berichtigungen zu Walter Horn und Sigmund Schenkling: Index Litteraturae Entomologicae, Serie I, die Welt-Literatur über die gesamte entomologie bis inklusive 1863*. Beitr. Ent. 28(2):329-436.

Heppner, John B.; Lamas, Gerardo;

b0674a 1982 *Acronyms for World Museum Collections of Insects, with an Emphasis on Neotropical Lepidoptera*. Bull. ent. Soc. Amer. 28(3):305-315.

Horn, Walther; Schenkling, Sigmund;

The whole series was reissued at intervals up to 1850. The French habit of using multiple titles affects this series, so Blanchard's volume may be seen as "Volume 4". The series of *Hist. Nat. The 1776 edition had an altered title page, but nothing else was new. On Official List of Works Approved as Available for Zoological Nomenclature (#37), The Official List title has some words incorrectly spelled! Many names in it are nondescript. It is necessary to check each name carefully. The short lists of species in lettered groups are separated by large chunks of German which can include descriptions. Some names in the lists are given "indications" and some are illustrated. Kocak has reviewed the status of the names, but his views are rejected by others. [Ref: b0674; b1193; b0840; b0681]

Vane-Wright, 1975, has studied the type-material. Most of the new names are based on descriptions published by I. I. Zschach. For notes, see Moulds, 1977, and Vane-Wright, 1975. Moulds' notes on a London printing should refer to Lugduni. Whether this meant Leyden (Netherlands) or Lyons (France) is in doubt. [1790]

PART XI
INDEX TO JOURNALS AND SERIAL

INTRODUCTION

This section is straightforward and needs little introduction. Abbreviations used in journal titles have been taken from the *World List of Scientific Periodicals* [b1419a]. Papers with multiple authors are listed under the senior author only, and it has been found necessary to occasionally truncate the author's name to keep the listings orderly. When this has been done it is indicated by using a '*' at the end of the name. For convenience a few publications which were issued in parts with various authors have been treated as if they were journals (i.e. In Seltz).

APPENDIX I
GENUS-GROUP NAMES WITH PROBLEMS

Listed here are entries extracted from Part III that require additional research, or action by the ICZN, etc.

- c *Acentropoclanis* Strand, 1915 OD: Arch. Naturgesch. (A)81(2):132 [b1306]. TS: *Libyoclanis vicina* Rothschild & Jordan, 1915. OD: Novit. zool. 22:285 [b1171]. TM: by original designation. SS: *Phylloxiphia* Rothschild & Jordan, 1903. [Check - Strand made *Clanis bicolor* Rothschild, 1894, the type of his new genus, but Hayes has examined the specimen, and found it to represent *vicinia*. Thus this is a genus based on a misidentified type-species. A case for the ICZN.] [Refs - b0494]
- a *Gurelca* Kirby, 1892, (H) OD: Syn. Cat. Lep. Heterocera 1:643 [b0828]. TS: *Lophura hyas* Walker, 1856. OD: List Spec. Lep. Ins. Brit. Mus. 8:107 [b1382]. TM: replacement name for *Lophura* Boisduval, [1875]. HC-Sph: Sph: Mac: [Note - This name may not be available, and if it is it is a junior homonym. However I have treated it as a good genus to give the species listed under it by D'Abbrera a home.] [Check - Homonym in need of a replacement] [Refs - b0444; b1162]
- a *Pseudosphinx* Burmeister, 1855 OD: Abh. naturforsch. Ges. Halle 3(4)(Sber.):65 [b0204]. TS: *Sphinx teurio* Linnaeus, [1771]. OD: Mant. Plant. (2nd ed.) (2):538 [b0895]. TM: by monotypy. HC-Sph: Sph: Mac: *Dilophonotini* [Check - The original spelling was *Pseudophinx*, but almost nobody has used it. A case for the ICZN.] [Refs - b0444; b0494; b1162; b0683]
- a *Rhopalopsyche* Butler, 1875 OD: Proc. zool. Soc. Lond. 1875:239 [b0211]. TS: *Macroglossa nycteris* Kollar, [1844]. OD: In Hügel, Kaschmir 4:458, pl 19, f 5 [b0844]. TM: by original designation. HC-Sph: Sph: Mac: [Check - Why isn't Redtenbacher the author of the typespecies] [Refs - b0444; b0494; b1162]
- a *Sataspes* Moore, [1858] OD: In Cat. Lep. Ins. E. India Co. 1:261 [b0961]. TS: *Sesia infemalis* Westwood, 1847. OD: Cabinet orient. Ent. :[61], pl 30, f 3 [b1403]. TM: by monotypy. HC-Sph: Sph: Mac: [Check - Classification] [Refs - b0444; b0494; b0074 (in Sphinginae); b1162]
- a *Sphingonaepiopsis* Wallengren, 1858 OD: Öfvers. K. VetenskAkad. Förh. 15:138 [b1389]. TS: *Sphingonaepiopsis gracilipes* Wallengren, 1858. OD: Öfvers. K. VetenskAkad. Förh. 15:138 [b1389]. TM: by original designation. HC-Sph: Sph: Mac: [Note - The nominal species *Sphingonaepiopsis gracilipes* Wallengren, 1858, is considered, on subjective taxonomic grounds, to be the same as the older-established nominal species *Pterogon nanum* Boisduval, 1847.] [Check - Rothschild & Jordan make *nanum* a nom. nud] [Refs - b0444; b0494; b1162]
