PRESENTED, *2nd November 1911.*

PAPER ON "THE FLORA OF BANFFSHIRE" BY
WILLIAM G. CRAIB, M.A.

Moved by the publication of the Flora of Buchan by Professor Trail, of Aberdeen University, by the very meagre information to be got for Banffshire from Professor Dickie's Botanist's Guide, and by the publication of two or three local lists in the Transactions of the Banffshire Field Club, its indefatigable secretary, Mr John Yeats, M.A., conceived the idea that by the systematic co-operation of botanists throughout the county it might be possible to collect such information regarding the distribution of plants in Banffshire as might be worthy of a place in the Club's Transactions. Being responsible for one of the local lists referred to, I was induced by the Secretary and by Mr Grant, the treasurer, to undertake the task with the aid of such botanists and collectors as might be available. Such is the origin of the following botanical survey of the County of Banff.

The area at first contemplated was not the rather artificial geographical area of the county, but the more natural region between the rivers Deveron and Spey, including these river basins. The lack of botanists, however, or more probably their modesty, led to the enforced curtailment of this wider scheme, and only Banffshire proper, with the addition of a few outside parishes on the banks of the rivers named, has been surveyed. The task, though thus restricted, has been no light one. Banffshire, with a seaboard of 32 miles, and a stretch inland in a south-westerly direction of 67 miles, reaching the high elevation of 4296 feet in Ben Mac Dhui, with many other mountains and mountain ranges scarcely inferior in height, bounded by two large rivers and intersected by numerous streams and rills, with all the variations in soil, climate, and rainfall that such a configuration implies affords a field for the botanist of great variety and extent.

The general plan of the work is the same as Professor Trail's Flora of Buchan, to which it may be looked upon as a companion, seeing that three parishes—Gamrie, King-Edward, and Turriff—occur in both, as does also that part of the parish of Alvah lying to the East of Deveron. All the records in the Flora of Buchan are based on Professor Trail's personal observations, but here, where there has been collaboration, the symbols employed are necessarily different, and may be thus explained:—

o denotes old records not verified during the progress of this work.

x, records by Professor Trail.

! denotes records by myself.

Dry ,, that I have seen a dried specimen of the particular plant from that parish.

* ,, records by the following botanists in the parishes against their names :—

Cullen—Mr James Ritchie, M.A., B.Sc. (records extracted from Professor Trail's record books).

Fordyce and Boyndie—Mr G. D. Thomson, M.A., Kindrought.

Alvah—Miss J. A. Fraser, M.A., Linhead (collection made for the Dickie prize);
Mr G. K. Fraser, M.A., Linhead.

Forglen—Mr Stuart, Gardener, Forglen House; Mr G. K. Fraser, M.A., Linhead.

Marnoch—Mr G. K. Fraser, M.A. (collection made for the Dickie prize).

Rothiemay—Miss Jeannie Geddes, M.A.

Cabrach—Mr J. S. Burns, M.A., and Mr J. Yeats, M.A.

Inveravon—Mr Watt, Jun., M.A., B.Sc., Knockando (collection made for the Dickie prize); and Mr Laurence Watt, Glasgow.

Aberlour—Mr John White, M.A., The Orphanage, Aberlour.

Kirkmichael—Mr James J. Burgess, M.A., Dyke.

Knockando—Mr C. Watt, Senr., M.A., Knockando.

Ordiquhill—Mr A. Donald, M.A., Ordiquhill Schoolhouse.

Keith—Mr Henry (collection made for Dickie prize, records extracted from Prof. Trail's record books), and Mr G. Petrie Hay, M.A.

Mortlach—Mr Laurence Watt, Glasgow.

To these botanists my best thanks are due for their painstaking work and able assistance. It is impossible here to specify or to attempt to gauge how much the work is indebted to Professor Trail for records in every parish, which he has very generously placed at my disposal. A glance at the tabular statements will at once show that without these records the Flora would have been much less complete.

I am deeply indebted to several other botanists for generous help in the determination of critical species. Mr W. Barclay, Perth, has not only very kindly named all the specimens of the genus *Rosa*, but, being well acquainted with Banffshire, he has also written up the distribution of that genus from his own personal observation and from specimens forwarded. The Rev. E. F. Linton has determined several consignments of *Hieracia*, chief among which may be mentioned a large collection from Gamrie, which yielded several novelties for

Banffshire. All specimens of the genus *Rubus* which were sent to me, or were collected by me, have been named by Rev. W. M. Rogers.

With regard to the recent lists in the Transactions of the Banffshire Field Club, viz., that of the Boyne district by Mr Thomson, Kindrought, and that of the Banff district by myself, these may be taken to be superseded by the present list. Mr Thomson has kindly forwarded to me notes giving several additions to his previous list, a few corrections, and full notes of the parishes in which the plants were found by him.

The Rev. Dr. W. S. Bruce, of Banff, has also contributed to the Transactions several papers dealing with the Flora of Banffshire; but, unfortunately, these papers are practically useless for the present work, owing either to the localities mentioned being too vague, or to the use of local names of the plants. He records *Carex incurva* and *Senebiera Coronopus* for Banff, and *Pyrola secunda* for Alvah, plants which I have been unable to find in the districts mentioned. There is still another published list dealing with part of the district under review: a list for the Parish of Cairnie, given in Pirie's "Parish of Cairnie" (1906). As this list contains several mistakes, I prefer to omit the records contained in it, and to rely on the records of Prof. Trail for that parish.

The most difficult, though most pleasant, duty remains, to express my heartfelt thanks, however inadequately, to Mr Yeats. To him, the originator and inspirer of this Flora, has fallen the arduous task of maintaining the correspondence with the local workers which such a work involves. This from the beginning of the enterprise he has most ungrudgingly performed, sparing neither valuable time nor advice.

With regard to the old records, it is matter of regret that space does not allow of a complete list, but below is appended a list of the old records cited. So far as possible only the earliest records are given, but as they have been extracted from various sources, and as all the original authorities have not been examined by me, it is possible that there may be mistakes and omissions.

The following is a list of the contractions used for the works cited:—
