THIS Catalogue contains a list of the specimens of British Diatomaceæ in the Collection of the British Museum. It is arranged according to the Rev. William Smith's 'Synopsis of the British Diatomaceæ.'

The specimens were all received from the Author of that work; they form two series. The first are mounted on glass slides for microscopic examination, and arranged in a cabinet, as the types of his species. The second series consist of masses of the species dried on paper or tale, in little paper pockets mounted on sheets of foolscap paper. Each slide and pocket is marked with his initials, thereby showing that they have been examined by him, and represent the species described and figured in his work.

JOHN EDWARD GRAY.
