PREFACE

TO THE

THIRD EDITION.

THE public having so highly favoured me as to call for a Third Edition of this little work, I have endeavoured to show my gratitude by giving the result of long experience in the propagation of this now very popular flower. I am induced to flatter myself that the directions given in the following pages for propagation and for the cultivation of roses in pots will be found both interesting and profitable to the amateur; in the former I trust those given will be found sufficiently plain: but I must observe that a practical cultivator here finds some difficulty; he, almost obstinately, supposes that every one must know *something* relative to those, with him, every-day operations; he is apt therefore not to go sufficiently into detail. I have, in writing on propagation, combatted this feeling; and humbly hope that what I have said will be found sufficiently explicit by an indulgent public.

Sawbridgeworth,
Nov. 8, 1843.

PREFACE

TO THE

SECOND EDITION.

IN giving a Second Edition of this little work to the public, I have to again beg indulgence, for I fear that more than I have been able to perform will be expected. Still I am induced to hope that my hints and instructions for raising roses from seed, most certainly original, will meet with the approbation of rose amateurs. And when I adduce as a fact, that some very pretty hybrid China Roses were raised from seed in Yorkshire, from a blush tea-scented rose, trained up the rafters of an old greenhouse, and fertilised with various hardy roses, it will certainly encourage those who live further south to hope for success without the aid of glass.

The fear of being tedious, and the little knowledge I yet possess of the habits and flowers of many

of the new roses, has induced me not to attempt a description of all of them; for till they have bloomed in the open ground, and under different circumstances, *at least two seasons*, a proper estimate cannot be formed of their qualities. As the leading characters of those are given in the catalogue published annually in the autumn, which will always be sent by post on a paid application, I flatter myself this seeming omission will be excused. Instructions for budding, grafting, and other modes of propagating roses are given in every gardening book; I have not, therefore, thought it worth while to endeavour to impart any of my knowledge in those matters. But my principal motive for omitting this branch of rose culture is the impossibility of conveying by words any tangible idea of the nicer modes of practice: it is very easy to *show* how to insert a bud, or put on a graft, but almost impossible to *tell* it.

Roses may be struck from cuttings, and budded and grafted from March to September if the buds, grafts, and stocks are in a proper state. It is only incessant practice that can give this knowledge, as almost every family, and even different varieties of the same family, require peculiar treatment. A small volume might be written on this subject. Perhaps when the hoar frost of age has powdered

me more plentifully than at present, and when the cultivation of this favourite flower is followed more for my pleasure than my business, I may possibly again attempt to make a little book about roses.

Sawbridgeworth,
April, 1840.

INTRODUCTION.

So many rose amateurs have complained that it is extremely difficult to select, from the multiplicity of roses now under cultivation, such varieties as are distinct and adapted for particular situations, though accurately enough described in a catalogue, I have presumed some practical observations might be acceptable. I have also long felt the conviction, that a mere enumeration of the form and colour of the flower is not enough, particularly for the amateur with a small garden; for he, of course, wishes to select a *few* varieties, and those well adapted to the situation they are to occupy. As a guide, then, to the lovers of roses, this little treatise has been written in the few leisure moments allowed me by the unceasing cares of a general nursery business. I give the result of twenty years' experience, gained by the culture of choice roses on a much larger scale than any where in Europe. I say this advisedly, as from ten to twelve acres are here devoted to the cultivation of select named varieties. In noticing and describing the different roses in the following

pages, though a cultivator of them for sale, I have endeavoured to lay aside all business prejudices, and only to view them as an admiring amateur. Varieties inserted in the catalogue, and not noticed here, are, in many cases, equally beautiful with those that are; but in these instances they perhaps much resemble them, or at least have no particular distinguishing traits. It may be asked, Why, then, are so many varieties enumerated in the catalogue, if so few comparatively can be recommended? To this I reply, that some roses resemble each other in the form and colour of their flowers, yet differ much in the character of their leaves, branches, and general habit. Some will also often bloom out of character, and imperfectly, one or two seasons consecutively, while others of the same colour and of the same family are blooming well; and then, perhaps, for a like period, the former will have their bright seasons of perfection, while the latter receive some blighting check; so that it is almost necessary to have plants of different natures bearing flowers alike. I may also mention, that in moist showery weather, the flowers of some of the extremely double roses cannot open, but those of others less double, but like them in colour, will open freely, and bloom in great perfection.

These little facts are well known to the experienced cultivator.

Some new roses inserted in the catalogue have only bloomed here one season, and perhaps not quite in perfection, so that an accurate description could not be given of them: many of these are most undoubtedly fine varieties. In classing the roses in the following pages, and in the catalogue, I have retained those that are but slightly hybridised in that division to which they have the nearest affinity; for instance, if a rose between the French and Provence roses has more of the characters of the former than of the latter, it is retained with the French roses, as it will group well with them, though not a pure French rose: this helps to avoid those numerous subdivisions with which most of the French catalogues are burdened, as they only tend to confuse the young amateur. In the descriptions, the colour of the flower is not always given, as the catalogue, of which this guide is only a companion, generally gives that correctly.

In forming a collection of roses from the French gardeners, great difficulty is often experienced by their incorrectness in the names of their plants: this inattention, to call it by no worse name, has long been the bane of com-

mercial gardening. In this country almost every nurseryman is now aware of the great responsibility he is under as to correct nomenclature; but in France they manage these matters differently, certainly not "better;" for if a Parisian cultivator raises a good rose from seed, and gives it a popular name, a provincial florist will immediately give some one of his seedlings, perhaps a very inferior rose, the same, so that there are often two or three roses bearing the same name; and if the original, or most superior variety, is ordered, ten to one if you get it, as the French florist generally gives you that which is most convenient for him to send, quite regardless of what you wish for. This is carried to an extreme, of which only those well and intimately acquainted with roses can form a just idea.

I have now only to beg the indulgence of my readers. A man of business must be deficient in the many requisites of correct composition. I have endeavoured to be plain and explicit; and cannot help flattering myself, that the instructions conveyed in these insignificant pages may be the means of restoring many unfortunate neglected roses to health and vigour.

Sawbridgeworth, Herts,

THE
SUMMER ROSE GARDEN.

THE PROVENCE, OR CABBAGE,
ROSE.

(*ROSA CENTIFOLIA*.)

THIS rose has long and deservedly been the favourite ornament of English gardens; and if, as seems very probable, it was the hundred-leaved rose of Pliny, and the favourite flower of the Romans, contributing in no small degree to the luxurious enjoyments of that great people, it claims attention as much for its high antiquity, as for its intrinsic beauty. 1596 is given by botanists as the date of its introduction to our gardens. That "prince of gardeners," Miller, says that it is the prettiest of all roses; and this idea still prevails to a great extent in the agricultural districts of England, where, in the farm and cottage gardens, the Cabbage Rose and the Double Wall-Flower are the most esteemed inmates; forming in their turns, with a sprig of rosemary, the

Sunday *bouquet* of the respectable farm-servant and cottager.

The groves of Mount Caucasus are said to be its native places of growth, and also Languedoc and Provence; but the claims of these latter have been disputed. I lately wrote to a very old rose amateur in France for information on this point.

He informs me that the species with single flowers is found in a wild state in the southern provinces; it is therefore very probable that it was called the Provence Rose from growing more abundantly in that province: it has now, however, quite a different name in France, for it is called the "Rose à Cent Feuilles," from the botanical name, *Rosa centifolia*, or Hundred-leaved Rose. I must here confess that, when I was a young rose-fancier, this name often misled me, as I was very apt to think that it referred to the Scotch and other small and thickly-leaved roses, not for a moment supposing that the term was applied to the petals or flower-leaves.

Hybrid roses, between this and *Rosa gallica*, are called Provence Roses by the French amateurs of the present day. Our Provence, or Cabbage, Rose is exceedingly varied in the form and disposition of its petals: the first in the catalogue, *Anemoniflora*, has those in the centre of the flower imperfect and partially fimbriated, giving it something the appearance of a semi-double anemone; whence its name.

The Celery-leaved Rose, or *Rosa apiifolia*, is also a curious rose, unlike any other: its leaves are, perhaps, as much like imperfectly curled parsley as celery. The curled Provence is as beautiful as curious, having fine globular-shaped flowers, with petals waved in a very peculiar manner. *Dianthæflora*, or the Pink-flowered Rose, is a curious variety, with imperfect lacinated petals, unlike any other rose, and something like a pink. Duchesne is a Provence Rose, a little hybridised, with very large, finely-shaped, and double flowers. Duc d'Angoulême also slightly departs from the habits of the true Provence Rose: this is a finely-shaped rose, of a vivid rose-colour. The Dutch, or Large Provence, is exactly like the Old Cabbage Rose, and equally fragrant, but very much larger: this is a fine rose for forcing, but with fewer petals than some other varieties. Grande Agathe, also known as the Lücken Provence, is indeed a grand rose, remarkably double, and finely formed. Its flowers are of the palest flesh-colour: like some others of the true Provence Roses, its clusters of bloom are too heavy and pendulous to be seen with effect on dwarf plants. Illustre Beauté, or Célestine, is a hybrid Provence, with flowers extremely double, and not quite so globular as those of the true Provence Roses; but a most beautiful rose, and a very abundant bloomer. The King of Holland is a very old variety, with immense glo-

bular flowers, and curious sepals ; so that the flower-bud seems surrounded with leaves. The Monstrous Provence, Cabbage-leaved, or Centifolia bullata, has that large and curious inflated foliage, which we have no expressive name for, but which the French call "bullée:" it is a vigorous-growing plant, with flowers like the Old Provence. La Reine de Provence really deserves to be the queen of this division. Its large and finely-shaped globular flowers have a good effect when suspended from a standard: these are of a pale lilac rose-colour, distinct and beautiful. The Scarlet Provence is an old variety, one of those misnomers that in flowers so often lead to disappointment: it was probably the first Provence Rose that made an approach to scarlet; but the faint carmine of its flowers is very far removed from that rare colour among roses. The Spotted is a hybrid Provence of great beauty, with large globular flowers of the deepest rose-colour, delicately spotted. This fine rose has large leaves, and makes upright shoots of great luxuriance and vigour. The Striped Provence is a delicate variety, with flowers of a pale flesh-colour, often striped with red. This rose has smooth glaucous green shoots, and leaves much resembling the Striped Moss, and the Old White Moss.

The Unique Provence is a genuine English rose, which, I believe, was found by Mr. Grimwood, then of the Kensington Nursery, in some

cottage-garden, growing among plants of the common Cabbage Rose. This variety was at first much esteemed, and plants of it were sold at very high prices. Most probably this was not a seedling from the Old Cabbage Rose, as that is too double to bear seed in this country, but what is called by florists a sporting* branch or sucker. In describing this and the next division I shall have occasion to notice more of these spontaneous deviations. The Striped Unique is one; for this was not raised from seed, but, a flowering branch of the Unique having produced striped flowers, plants were budded from it, and the variety was "fixed," as the French florists term it. However, this is certainly *not fixed*; for it is a most inconstant rose, in some soils producing flowers beautifully striped, in others entirely red, and in the soil of this nursery most frequently pure white. In Sussex, where, this season (1837), it has bloomed finely in its variegated character, it has been honoured with a new name, and is now known as "the Maid of the Valley." The Wellington Provençe is one of the largest of this division, something like Grand Bercam in the colour of its flowers, which are of a beautiful

* A term used to denote any portion of a plant departing from the character the entire plant should sustain. Thus, one stem of a carnation will often produce plain-coloured flowers, while the remainder of the plant has striped flowers: it is then said "to sport."

deep rose, very double, but not quite so much so as those of the Dutch Provence. This forms a splendid standard. Wilberforce is a new variety, and very splendid. This and La Simplicité are slightly hybridised with some dark variety of *Rosa gallica*, which has greatly added to their beauty, as they both produce flowers approaching to dark crimson, a rare colour among Provence Roses.

Since the publication of the first edition but few additions have been made to this family. In Appendix, List No. 2. I have given the names of a few new varieties, among which the Superb Striped Unique may be mentioned, as being very beautiful and constant in its variegation; it is of less vigorous growth than the common Striped Unique, its leaves are nearly round and deeply serrated: this is not the variety mentioned as being grown in Sussex, but a French variety, which was found among others, and propagated on account of its distinct character; the same rose appears to have bloomed at Grimstone Park, Yorkshire, in great perfection.

There are but two ways in which Provence Roses can be employed as ornaments to the flower-garden,—as standards for the lawn, and as dwarfs for beds. Standards of some of the varieties, if grown on a strong clayey soil, form fine objects of ornament, as their large globular flowers are so gracefully pendent. In this de-

scription of soil also, if grown as dwarfs, they will not flourish unless they are worked on the Dog Rose; but in light sandy soils it will be advisable to cultivate them on their own roots. The freedom with which they grow in the light sandy soils of Surrey points out this method of culture on such soils as the most eligible. In pruning, they require a free use of the knife: every shoot should be shortened to three or four buds. If not pruned in this severe manner, the plants soon become straggling and unsightly. In poor soils, they should have annually, in November, a dressing of rotten manure on the surface of the bed, to be washed in by the rains of winter.

To raise Provence Roses from seed, for which more full directions are given when treating of Moss Roses in p. 20., the Wellington should be planted with, and fertilised by, the single Crimson Moss, and Le Grand Bercam with the Luxembourg Moss; if seed can be procured from either of these varieties, thus fertilised, some fine crimson, and, what is also very desirable, pure Provence Roses may be raised. As the characters of the true Provence Rose are so desirable, the object ought to be to endeavour to obtain deep crimson varieties, with all the pleasing qualities and perfume of the original. Wilberforce planted with the single Crimson Moss might possibly produce seed; but this variety is a hybrid, and, like many other hybrid roses, it does not bear seed so

freely as those that are pure: but I shall have occasion to notice many exceptions to this, in giving instructions for raising new roses from seed: these instructions and hints, with the names of the best seed-bearing roses, will be given at the end of each article, and they will, I hope, form a valuable addition to this work.

THE MOSS ROSE.

(*ROSA CENTIFOLIA MUSCOSA.*)

The Moss Rose, or Mossy Provence Rose, is most probably an accidental sport or seminal variety of the common Provence Rose, as the Old Double Moss Rose, which was introduced to this country from Holland in 1596, is the only one mentioned by our early writers on gardening. If it had any claims to be ranked as a botanical species*, the single-flowering Moss Rose would have been the first known and described; but the Single Moss, as compared with the Double, is a new variety. Some few years since a traveller in Portugal mentioned that the Moss Rose grew

* Miller says, with a most remarkable simplicity, that he thinks it must be a distinct species, as it is so much more difficult of propagation than the common Provence Rose.

wild in the neighbourhood of Cintra; but, most likely, the plants were stragglers from some garden, as I have never seen this assertion properly authenticated. The origin of the Double Moss Rose, like that of the Old Double Yellow Rose (*Rosa sulphurea*) is therefore left to conjecture; for gardeners in those days did not publish to the world the result of their operations and discoveries. As regards the Moss Rose I regret this; for it would be very interesting to know how and where this general favourite originated. Probably, when first noticed, gardening was of such small consideration, that the discovery of a rose, however remarkable, would not be thought worth registering. That it is merely an accidental sport of the common Provence Rose is strengthened by the fact, that plants produced by the seed of the Moss Rose do not always show moss: perhaps not more than two plants out of three will be mossy, as I have often proved. Those that are not so are most evidently pure Provence Roses, possessing all their characters. To show, also, the singular propensity of the varieties of *Rosa centifolia* to vary, I may here mention that the common Moss Rose often produces shoots entirely destitute of moss. In the summer of 1836 I also observed a luxuriant branch of the Crimson, or Damask, which is generally more mossy than the Old Moss Rose, having a remarkable appearance. On examination I found it nearly smooth. The next

season it had entirely lost its moss, and had produced semi-double flowers, the exact resemblance of the Scarlet Provence. The White Moss is another instance of this singular quality, for that originated from a sporting branch; the Mossy de Meaux is also a curious deviation, the history of which will be given in the descriptive enumeration following; the Crested Moss, or Provence, is another case in point. It seems, therefore, very feasible that the Provence Rose, from being cultivated in Italy through so many ages, produced from seed, or more probably from a sporting branch, the Double Moss Rose, that is, a double Cabbage or Provence Rose, covered with that glandular excrescence which we term moss; this branch or plant was propagated, and the variety handed down to us, perhaps, as much admired in the present day as when first discovered. These Roses always have been, and I hope always will be, favourites: for what can be more elegant than the bud of the Moss Rose, with its pure rose-colour, peeping through that beautiful and unique envelope?

The first in the catalogue is the Asepala, or *Rosa muscosa asepala*; a new variety, something like the Provence *Dianthæflora*, curious, sometimes very pretty. The Blush Moss is a most beautiful variety of the colour of that well-known rose, the Celestial,—so exactly intermediate between the White Moss and the common, that it is quite ne-

cessary in a collection. The Crimson or Damask Moss, sometimes called the Tinwell Moss, was originated in the garden of a clergyman at Tinwell in Rutlandshire; from thence sent to Mr. Lee of Hammersmith. As it was one of the first deep-coloured Moss Roses, it was much esteemed, and plants of it were sold at a high price. This is a more luxuriant grower than the Old Moss; its branches, leaves, and buds are also more mossy. It is an excellent rose for beds; for, if its shoots are pegged to the ground with small hooks, the surface is soon covered with its luxuriant foliage and flowers. For this purpose it is better on its own roots, as worked plants so treated would throw up too many suckers. The French Crimson Moss is deeper in colour, and much more double than the preceding, not such a luxuriant grower, but one of the best Moss Roses we have. The Crested Moss, Crested Provence, or *Rosa crestata*, for it is known by these three names, is said to have been discovered growing from the crevice of a wall at Friburg in Switzerland. No rose can be more singular and beautiful than this. The buds, before expansion, are so clasped by its fringed sepals, that they present a most unique and elegant appearance, totally unlike any other rose. When the flower is fully expanded, this peculiar beauty vanishes, and it has merely the appearance of a superior variety of the Provence Rose. It should here be mentioned, that, if grown in a poor soil,

its buds often lose their crest, and come plain, like the Provence Rose. As a standard, this rose is very graceful, its large flowers and buds drooping from their weight. Mousseuse de Veillard has not yet bloomed here in perfection. In colour it does not differ from the common moss; but it seems more dwarf and delicate in its habit, and more abundantly mossed. Eclatante is a Moss Rose, quite worthy of notice; for it is so vigorous in its growth, that it soon forms a fine tree: its colour is also remarkably bright.

Moussue Partout is indeed all over moss; for its leaves, branches, and buds are thickly covered. The flowers of this singular variety are much like the common Moss Rose. The Miniature Moss is one which I originated from seed in my endeavours to raise a superior dark variety from the Single Moss Rose. Its flowers are small, of a bright pink, and pretty, though only semi-double. The Prolific Moss is not the Prolifère of the French, but a dwarf variety of the common Moss, and a most abundant bloomer. This is known by the French florists as the Minor Moss: it is a most excellent variety to keep in pots for forcing. Prolifère, or Mousseuse Prolifère, is an old variety from France, producing very large flowers, which do not open well in wet weather; but in dry hot seasons this is a fine rose. The Pompone Moss, or Mossy de Meaux, has for some years been a great favourite. This rose was found by Mr. Sweet

of the Bristol Nursery, at a garden at Taunton, Somersetshire, in 1814. He obtained possession of the plant for five pounds; and afterwards distributed the young plants at one guinea each. It was most probably an accidental sport from the Old Rose de Meaux, and not from seed, as that rose is too double to bear seed in this country. This is one of the prettiest of roses, and one of the first to make its appearance in June, gladdening us with its early clusters of small and finely-shaped flowers. It is not well adapted for a standard; for, when grafted or budded, it is but a short-lived plant, at least in the generality of soils; on its own roots, in light rich soils, it may be grown in great perfection. The Perpetual White Moss is a Damask Rose: it is pretty only in bud; for, when expanded, the flower is ill-shaped. This made a great noise in the rose world when it first appeared; but its reputation for beauty was much over-rated. However, if grown luxuriantly, it produces immense clusters of buds, which have a very elegant and unique appearance. This rose is a proof, often occurring, that florists are apt to designate a plant by some name descriptive of *what they wish it to be, rather than of what it is*. The Perpetual Moss is *not perpetual*; but, like the Old Monthly Damask Rose, in moist autumns and in rich soils it sometimes puts forth flowering branches. The Luxembourg Moss, or “Ferrugineuse,” has been

raised from seed, within these few years, in the Luxembourg Gardens. It is evidently much tinged with the dark colouring of some variety of *Rosa gallica*, and *approaches* to that grand desideratum, a dark crimson Moss Rose. This is most certainly a superb variety, of great luxuriance of growth, forming a fine standard: it will probably be the parent of a dark Moss Rose still more splendid, as it bears seed freely. The Mottled Moss is the *Mousseuse Prolifère*, a large globular rose with petals that are crisp or curdled before its flowers open: this gave rise to its name of Mottled Moss. This rose does not open well in wet seasons, but is often very beautiful, and forms a fine standard.

The Scarlet Moss, the *Mousseuse de la Flèche* of the French, from being originated at the town of La Flèche, is a pretty brilliant rose, with flowers nearly as small as the Pomponne Moss, but not so double. The Spotted Moss is also a French variety; but its spots do not add to its beauty in the eyes of the English florist; though in France any distinguishing feature in a flower, however absurd, is seized with avidity to mark a variety. The Old Striped Moss is a singular rose, of delicate growth, often producing flower-stems and buds entirely without moss; still its glaucous foliage and striped flowers give the plant a pretty original appearance. The Sage-leaved Moss is a good double rose, remarkable only for its leaves,

which are much like those of the common sage. The Single Moss and Single Lilac Moss are desirable as being distinct, and capable of bearing seed from which new varieties may be raised. Rivers's Single Moss is inclined to be semi-double. This is a remarkably luxuriant grower, as is the Single Crimson Moss, a seedling which bloomed for the first time in the season of 1836; a rose quite worth notice, for its colour is beautiful; and as it is a true Moss Rose, and bears seed abundantly, it will, I hope, be the parent of some first-rate varieties. The White Bath or Clifton Moss is a favourite and beautiful Rose: this owes its origin to a sporting branch of the common Moss, which was found in a garden at Clifton, near Bristol, about thirty years since, from whence it was distributed. The Old White Moss is, perhaps, a French variety, as the French cultivators, when speaking of the Clifton Moss, call it *Mousseuse Blanche Anglaise*; and the Old White Moss, *M. Blanche Ancienne*. This has not so much moss as the Clifton, and is not pure white, but inclining to a pale flesh-colour: it is also much more delicate in habit.

To the Moss Roses described in the preceding pages may now be added Lancel, so named from its originator, which has the merit of producing the most beautiful of flower-buds. The moss with which they are enveloped is long and abundant, and of the most lively green; its flowers, when

expanded, are of a deep reddish rose, rather irregular in shape: it is in its buds that this rose is interesting. The Agathe-leaved Moss, "Mousseuse à Feuilles d'Agathe," is a new hybrid, between the Rose gallica Agathe and the Moss Rose: its flowers are of a pale flesh-colour, rather irregular in form; this is interesting from its singularity, but not by any means beautiful. Mousseuse de Metz proves to be a very pretty bright carmine Moss Rose, with flowers double and finely shaped; in short, a rose quite worthy of cultivation.

The Scarlet Pomponne, Pomponne écarlate, or Mousseuse Picciola, is a new variety, something like Mousseuse de la Flèche in character, but more dwarf, with flowers much smaller, and nearly or quite double; it is a very pretty bright carmine rose, and will probably prove one of the prettiest of our dwarf Moss Roses.

A new striped Moss Rose, Mousseuse Panachée pleine, was received two years since from France; this has proved a much prettier rose than I at one time thought it to be; its flowers are pale flesh striped with pink, and generally constantly so; sometimes half the flowers will be white, and the remaining petals of a bright rose colour.

Several moss roses have been lately introduced, most of them emanating from the Luxembourg Moss. I will take them in their alphabetical order, and begin with à Feuilles Pourpres, so

named from its leaves being of a dark red in spring. This is a pretty, brilliant carmine rose, with flowers rather small, and will probably, when its character is more developed, prove to be worthy a place in a good collection. Alice Leroy, recently raised at Angers, that most favourable of all climates for raising roses from seed, is of a robust habit, giving full-sized double flowers, rather a deep rose tinged with lilac.

Anemoné is a very distinct variety, with shoots very slender and graceful; flowers bright pink, petals incurved, much like those of some double anemonies. Celina is, however, one of the very best dark crimson moss roses we yet possess: its foliage has a peculiarly dark glossy-green tint, quite distinct; its flowers are large and double, but not quite full to the centre; colour very brilliant but deep crimson, in some seasons slightly tinged with purple: this will most probably supersede the Luxembourg Moss, which only a few years since, was our only deep-coloured moss rose. Its habit is not quite so robust as that of the latter, which in some soils is almost too much so, making here shoots six feet in length in growing seasons. The Crimson Pomponé, or Oscar Foulard, raised from seed by M. Foulard of Le Mans, is small, with flowers quite double; colour, red, tinged with purple: a pretty and distinct rose. Hélène Mauget, and Hortensia are quite new roses, from that prolific parent the Luxem-

bourg: they are pretty, but not enough distinct to be recommended: to the collector only they will prove interesting. Louise Colet is a remarkable and distinct variety, not so much in the colour of its flowers as in its curious leafy sepals, giving the flower a pretty and singular character. Malvina, raised by the same cultivator at Angers, is really a good double rose; the whole plant distinct in character; flowers full sized, and very double, of a bright rose-colour slightly tinged with lilac. Pompone Feu is a dwarf variety, with peculiar brilliant pink flowers, not quite double: this is a pretty dwarf rose, and should be planted with the other Pompone moss roses. Princess Royal was raised here from seed by crossing that old variety Mousseuse ponctuée with the Tuscany Rose. This would indeed be the most splendid of moss roses if its flowers were quite double; they are not so, but still more than semi-double, and the number of its petals seems to increase annually, as in the Single Crimson Moss, which, from being quite single, is now semi-double. Princess Royal is, if possible, still more robust in its habit than the Luxembourg; it makes shoots five to seven feet in one season; its leaves and shoots in spring are of a deep red; it gives a profusion of flowers, which are of a very deep crimson purple, mottled with bright red; when in bud, or half expanded, they are very beautiful. As this rose bears seed freely, it will most probably be the parent of some unique va-

rieties. We have now also what was at one time thought to be impossible, viz. the Old Rose Unique mossed: this is called Moss Unique de Provence. I cannot learn its origin; if from seed or otherwise; but am inclined to think it is a sport from our old favourite, the Unique Rose: its habit is exactly similar, and equally robust; its flowers of the same pure white, and blooming in the same magnificent clusters. This beautiful white rose offers a fine contrast to Celina, and equally deserves a place in every garden.

Moss Roses, when grown on their own roots, require a light and rich soil: in such soils, they form fine masses of beauty in beds on lawns. In cold and clayey soils they in general succeed much better worked on the Dog Rose, forming beautiful standards. I have ascertained that they establish themselves much better on short stems, from two to three feet in height, than on taller stems. If short, the stem increases in bulk progressively with the head, and the plants will then live and flourish a great many years.

To give a succession of bloom, the plants intended to flower early should be pruned in October, and those for the second series the beginning of May—shortening their shoots, as recommended for the Provence Roses. Give them also an abundant annual dressing of manure on the surface, in November.

To raise Moss Roses from seed is a most inter-

esting employment for the genuine rose amateur; such a pleasing field is open, and so much may yet be done. The following directions will, I hope, assist those who have leisure, perseverance, and love for this charming flower. A plant of the Luxembourg Moss and one of the Single Crimson Moss should be planted against a south wall, close to each other, so that their branches may be mingled. In bright calm sunny mornings in June, about ten o'clock, those flowers that are expanded should be examined by pressing the fingers on the anthers; it will then be found if the pollen is abundant; if so, a flower of the former should be shaken over the latter; or, what perhaps is better, its flower-stalk should be fastened to the wall, so that the flower will be kept in an erect position. Then cut a flower of the Luxembourg Moss, snip off its petals with a sharp pair of scissors, and place the anthers firmly but gently upon a flower of the Single Crimson, so that the anthers of each are entangled: they will keep it in its position: a stiff breeze will then scarcely remove it. The fertilising will take place without further trouble, and a fine heap full of seed will be the result. To obtain seed from the Luxembourg Moss, I need scarcely say that this operation must be reversed. / A wall is not always necessary to ripen seed; for in dry soils, and airy exposed situations the above Moss Roses bear seed in tolerable abundance. The treatment of the heaps, sowing the

seed, and the management of the young plants, as applicable to all, is given at the end of the first part.

THE FRENCH ROSE.

(*ROSA GALLICA.*)

The French Rose (*Rosa gallica* of botanists) is an inhabitant of the continent of Europe, growing abundantly in the hedges of France and Italy. In the "*Floræ Romanæ*" of Sebastiani, published at Rome in 1818, this rose, *Rosa sempervirens*, and *Rosa canina*, are said to be the only roses growing naturally in the Papal States. It was one of the earliest roses introduced to our gardens. 1596 is given by botanists as the date of its introduction; and, owing to its bearing seed freely, it has been the parent of an immense number of varieties, many of the earlier sorts being more remarkable for their expressive French appellations than for any great dissimilarity in their habits or colours. The Semi-double Red Rose, grown in Surrey for the druggists, is of this family, and a very slight remove from the original species, which is of the same colour, with but one range of petals, or single. All the roses of this group are remarkable for their compact and upright growth; many for the multiplicity of their petals, and tendency to produce variegated flowers. Some of these spotted

and striped roses are very singular and beautiful. The formation of the flower, in many of the superior modern varieties of *Rosa gallica* is very regular; so that most probably this family will ultimately be the favourite of those florists who show roses for prizes in the manner that dahlias are now exhibited; that is, as full-blown flowers, one flower on a stem; for they bear carriage better, when fully expanded, than any other roses. In France, this is called the "Provins Rose;" and some varieties of it are classed in a separate division, as "Agathe Roses." These have curled foliage, and pale-coloured, compact flowers, remarkable for their crowded petals. That very old striped rose, sometimes improperly called the "York and Lancaster" Rose, seems to have been one of the first variations of *Rosa gallica*, as it is mentioned by most of our early writers on gardening. This is properly "*Rosa mundi*:" the true York and Lancaster Rose is a Damask Rose.

To describe a selection of these roses is no easy task, as the *plants* differ so little in their habits; and their flowers, though very dissimilar in appearance, yet offer so few prominent descriptive characteristics. Some of the new varieties lately introduced, though much prized in France, have not yet bloomed well here: the change of climate seems to have affected them. *A' Fleurs à Feuilles Marbrées*, as the name implies, has its leaves and flowers marbled or stained, as are also its branches. This

rose is so double, that it has as much the appearance of a ranunculus as a rose, and in fine weather is very beautiful; but wet soon disfigures it. Aglae Adanson is a fine marbled rose, something like the above in colour, but with much larger flowers, which are double, finely-formed, and open freely. Anarelle is a large-cupped and finely-shaped rose; its outer petals pale lilac; its centre of a deep purplish rose, distinct and good. Aspasia is one of the most delicate and beautiful roses known, for its form is quite perfect, a little inclining to be globular, like some of the hybrid China roses. Aurélie is much like the last in colour and form, but is delicately spotted with white. Assemblage des Beautés is not quite full enough of petals, but deserves its name, for its varied and finely-coloured crimson and scarlet flowers, on one stem, are always admired. Belle Herminie is a semi-double spotted rose, remarkable as being the parent of most of the spotted and marbled varieties. Berlèse is a fine rose, with a dark purple ground, spotted with crimson, and before it is faded by the mid-day sun it is very beautiful. Belle de Fontenay is now a well-known variety, but quite unique, as its margined flowers are distinct and characteristic.

Bizarre Marbré is a fine marbled rose, very double and well shaped, of a bright rose-colour beautifully shaded. Comte Walsh has been described in the catalogue, on the faith of a French florist, before it bloomed here; it has not proved true to

its description, as it is not margined, but it is a first-rate show rose.*

Camaieu is a very distinct striped rose. Its flowers are rather small, and sometimes not of a good form; still it is a very pretty rose. Comte de Murinais is a large flattish rose, of a slate-coloured ground, spotted with rose colour; a very distinct and good variety. Cramoisie Picotée is a distinct and curious slate-coloured spotted rose, not so pretty and brilliant as the Old Picotée; its spots have a reddish-brown tinge. Delille is a new rose, very prettily spotted on a purple ground. Like most of the roses of this colour it is only to be seen in perfection in the morning, if the weather is sultry; but in cloudy weather it will retain its beauty the entire day. Duc de Trévise is a most beautiful rose, of first-rate form for a show rose, and of a robust and distinct habit. Duc d'Orléans is also a fine and brilliant rose; large, finely cupped, and distinctly spotted with white, and of the most robust and vigorous habit. E'clatante is a rose that may be distinguished in a group, however crowded, as it is so extremely bright; it perhaps ought not to be called scarlet, yet no other term so well describes its colour.

E'clat des Roses is a very double and large

* This term is applied to those varieties that produce very double and perfect flowers, fit to be exhibited singly, as dahlias are.

rose, of the most perfect form for a show rose. It seldom produces deformed or ill-shaped flowers; the plant is also of the most vigorous habit. To Fanny Parissot this description may also be applied, only that its colour is much more delicate. Fanny Bias is a name also given to this rose. Fanny Elsler is a new and pretty spotted rose, but it has not yet bloomed here in perfection. Fleur d'Amour is one of the most vivid-coloured roses in this group, much like *Assemblage des Beautés*, but more double. *Grandissima* is a most robust-growing and very large rose, likely to prove a show rose of first-rate excellence. The King of Rome, or *Théodore de Corse* (for they are one and the same), is a beautiful double and compact rose, so exactly like a double *ranunculus* that it might almost be mistaken for one. Leopold is a fine dark rose, much like that old favourite the Tuscan Rose, but with smaller and more double flowers.

La Capricieuse is indeed capricious, for some of its flowers are plain, and some most beautifully pencilled with white; which, on the vivid rose-coloured ground of this rose, has a pretty effect. *La Moskowa* is a large dark rose, not quite double enough for a show rose, but its flowers have a fine effect on the plant. *Lafayette* is a pencilled rose, quite different from the generality of these roses, and much like *Nationale Tricolore*. It is shaded with purple and crimson, and varies

much with the season. *La Nationale* is a distinct variety, of a bright rose-colour, marbled and striped with crimson; one of the prettiest of its class. *Lucile* is a spotted rose: this, like many of the new variegated roses, is very pretty in-dry and warm seasons.

Madame Cottin is a large and well-shaped rose, adapted for a show-rose; as is also *Madame Dubarry*, perhaps one of the very finest double roses known. These are both of the most vigorous habits and first-rate excellence. *Malesherbes* is a purple spotted rose, requiring to be kept from the hot sun; for, like all roses inclining to purple or slate-colour, it soon fades. *Nationale Tricolore* is one of the prettiest of variegated roses, generally shaded with red and purple, with a white or yellowish centre; but this central colour is not constant.* *Oracle du Siècle* is a most charming rose, perfect in form, and rich and beautiful in its fine crimson and scarlet colouring.

Oriflamme is a rose which I ventured to describe as deep scarlet, on the faith of a very honourable florist, who raised it from seed. It has bloomed in this country, and proves to be a fine bright red rose, perhaps scarcely double enough. *Picotée*, or *Violet Picotée*, in some soils, produces flowers of a deep violet crimson, striped with white; in others it loses its variegation;

* This has, since the above was written, proved so much like *Belle de Fontenay* that it can scarcely be distinguished from it.

but, under all circumstances, it is a pretty and most distinct rose. Princess Victoria was raised from seed at Linton in Cambridgeshire by a Mr. Gimson. This is a fine brilliant crimson rose, and generally a good show flower, as it is very double, and regular in its form. Porcelaine Royale is a beautifully-shaped mottled rose; not large, but cupped, and perfect in its form, and adapted for a show rose. Rénoncule Ponctué, or the Spotted Ranunculus, is happily named; for it is much like a ranunculus, both in its form and in the disposition of its colours. When this rose opens well (which, owing to the crowded state of its petals, it sometimes fails to do), it is a peculiar and beautiful variety. The Superb Tuscan is a seedling from the Old Tuscan, with larger and more double flowers; very dark, perhaps more so than those of its parent, yet their colour is not so brilliant.

Sir Walter Scott is a good rose, finely-shaped, of that deep purplish-rose colour which has a very rich appearance; it is well calculated for a show rose, as its shape is generally perfect. Sombrioul is a delicate spotted rose, something like Aurélie; probably having the same origin, as it was raised from seed by the same grower. Tricolor, or La Belle Alliance, is now a very old variety; in some soils producing flowers prettily striped with yellowish white, in others its flowers are quite plain. Tricolor Pompon seems to be merely a

variety of the preceding, with smaller petals, and a greater proportion of white in them; probably, it owes its origin to a sporting branch of the original Tricolor. Tricolor *superba* is one of the finest of the striped roses: its ground colour is of the darkest crimson, on which its regular stripes of nearly pure white have a good effect; it also bids fair to be constant in its variegation.

Triomphe de Rennes is a very large and finely-shaped show rose: the habit of the plant is also most luxuriant, and it forms a fine standard. Tullie is a very large rose, of a bright rose-coloured ground, distinctly and largely spotted. The Prince, bright red, spotted with blush, is a very remarkable and pretty rose. Like all the roses of this colour, it requires to be kept from the sun. The Village Maid, or Provins Panachée, is now a well-known rose, varying so much in colour, in different soils, that many assert there are two or three varieties; but this is not the case, for there is as yet but one Village Maid Rose, which, in some situations, has red or carnation coloured, in others slate-coloured or purple, stripes.

Uniflore Marbrée has a tendency to produce its flowers on single footstalks, whence its name. It is a good-shaped and very double rose, beautifully marbled.

New varieties of this family are raised with such facility that it would lengthen this little

work too much to enumerate and describe all that have been received since the first edition was published. In List No. 2., I have, as show roses, given the names of some of the finest varieties in this family; but, as the characters of the variegated roses cannot be given with such facility, a few of the most remarkable must have a passing word.

Panachée pleine, which ought perhaps to be called the New Carnation Rose, is a seedling from the Village Maid Rose, with striped flowers, like it in every respect, but more compact and double in its flowers, and better calculated to show as a prize rose singly.

Triomphe de Beauté is also a dark violet crimson rose, prettily streaked with red; this is a very pretty bright-coloured well-shaped rose.

Pulchra Marmorea is one of the best of this class, a bright rosy-red, marbled with white. Superb Marbled, Superbe Marbré, or General Damremont is a finely-shaped full rose, crimson, sometimes marbled very beautifully with purple; this is an inconstant, but, when perfect, a very superb rose. Arethuse, like A` Feuilles à Fleurs Marbré, has its leaves prettily variegated or rather marbled; this is rather a small but very pretty rose, of a bright rose-colour, spotted with pale blush.

A perfect crowd of new varieties have lately been raised belonging to this family. My limits will only allow me to notice a few of the most striking

and superior varieties. Antonine d'Ormois is a fine free-growing variety, with flowers large, of the most perfect shape; colour a delicate blush. Cerise superbe is one of the most brilliant in colour in this class; its flowers approach to scarlet; they are quite double, and in shape perfectly beautiful. Columella is also a rose deserving a high eulogium. Generally its flowers are of a bright pink, beautifully shaded on their margins, with blush; occasionally it produces self-coloured flowers, but is always a first-rate and remarkably distinct variety. Kean is now become a well-known rose, remarkable for its constancy, for it is *always* beautiful; in size it is first-rate, in shape quite perfection; colour bright reddish crimson, in some seasons approaching to scarlet. Latour d'Auvergne is another of these most perfect roses, worthy of a place in every rose-garden; colour deep crimson, habit most robust and vigorous. Letitia, of a beautiful veined deep rose-colour, is equally valuable as a show rose, for in all seasons it is invariably perfect in shape. Shakspeare is a fine shaded rose; in most seasons this beautiful variety shows a brilliant red centre, having a charming effect. Schombrunn and Triomphe de Jaussens are also brilliant crimson roses, quite perfect in shape, and most constant and beautiful. There are yet many other self-coloured roses in this family, of equal beauty, but of which it is impossible to give descriptions without a sameness

which would be tedious to the reader. In the Catalogue of 1843 accurate descriptions are given, which, though brief, are correct. To variegated roses of this class one has been added most especially deserving of notice; this is *Ceillet parfait*, a rose raised in the West of France, and given out to the world before its qualities were appreciated. It is a hybrid between the Damask and the French rose, so exactly like a carnation in its beautifully-striped flowers as scarcely to be distinguished from one: its ground colour is pale blush, striped distinctly with dark red and crimson, no other variegated rose approaching it in beauty. One or two pretty varieties of *Rosa tricolor* have lately been originated. *Tricolor d'Orléans* is the most distinct of these: its flowers are of a peculiar vivid, shaded red, striped with white. A very pretty marbled rose, called *Modeste Guérin*, is also worthy of notice, as some of its petals are of a bright rose-colour, others nearly white. *Lavoisier*, a new rose, is remarkable for having its leaves variegated, and flowers spotted: this is a very double and finely-shaped rose. *Madelen Friquet* is also a perfectly-shaped rose, remarkably full of petals, something like that fine old French rose, *Crivalis*. This is a spotted variety; ground-colour, rose spotted with pale blush. Some of these spotted roses, more particularly those with a red or crimson ground, look as if they were disfigured by the weather, *i. e.* as if

rain had given rise to discolouration, but some are very distinct and pretty.

Most of the varieties of *Rosa gallica* are robust and hardy, and flourish equally as bushes on their own roots, grafted or budded on short stems, or as standards; but they cannot be recommended for tall standards, as their growth is too compact to be graceful. To grow them fine for exhibition as single blooms, or "show-roses," the clusters of buds should be thinned early in June, taking at least two-thirds from each; manure should also be laid round their stems on the surface, and manured water given to them plentifully in dry weather. With this description of culture, these roses will much surpass any thing we have yet seen in this country. To prolong their season of blooming, two plants of each variety should be planted; one plant to be pruned in October, and the other in May. These will be found to give a regular succession of flowers. In winter pruning, shorten the strong shoots to within six or eight buds of the bottom; those that are weak cut down to two or three buds.

To raise self-coloured French roses from seed, they should be planted in a warm, dry border, sloping to the south, in an open, airy situation. The shade of trees is very pernicious to seed-bearing roses; and, in planting roses for the purpose of bearing seed, it must be borne in mind that it will give great facility to their management if the

plants are planted in pairs, close to each other; accident will then often do as much as art in fertilising them; thus the Woodpigeon Rose may be planted with and fertilised by the Tuscany, La Globuleuse with Comte de Murinais, Oriflamme with Assemblage des Beautés, Vesta with Feu Turc, Jean Bart with Princess Victoria, Superb Tuscany with Leopold, La Majestueuse also with the latter. All these roses bear seed, often without being fertilised, but the crop is almost certain if that operation is performed; and the above unions are likely to produce roses of decided colours and first-rate qualities.

To raise variegated roses the following, which also bear seed freely, should be selected and planted as before directed:—Aglæ Adanson with Anacreon, the Village Maid with Duc d'Orléans, Tricolor and Tricolor Pompon also with the Village Maid. This last union would probably produce some pretty striped roses.

Berlèse may also be planted with Segulier, Duc d'Orléans with André Thouin, and the Leopard Rose with Anacreon: these would most likely give pretty spotted roses. Picotée might be fertilised with the Village Maid, and, if seed could be procured, some fine varieties must be the result; but the central small petals should be removed with a pair of tweezers from the former rose, when its flowers are half expanded, as they are too much crowded to allow it to bear seed. Clear white and

crimson striped roses are yet desiderata, as those we possess are inconstant. The Tricolor Rose fertilised with Globe Hip, which abounds in pollen, will be an experiment worth trying.

The Tuscany Rose, which is a most convenient variety for imparting dark colours, as it abounds with pollen more than any cultivated rose, should be planted in every rose seminary.

HYBRID PROVENCE ROSES.

These beautiful roses are exactly intermediate between the French and the Provence Rose, partaking, almost in an equal degree, of both parents. They have upon the long and graceful shoots of the Provence the close and more dense foliage of the French rose; and, in some of the varieties, the pale and delicate colouring of the first is enlivened by the rich and deep crimson hues of the latter. The origin of these roses may be soon attested; for, if the Single Moss, or Provence Rose, is fertilised with the farina of *Rosa gallica*, Hybrid Provence roses will be produced, agreeing in every respect with the above description. Among the most superior varieties is Agnes Sorel, a delicate fresh-coloured rose, very double and finely-shaped; Amelie Guérin is evidently from

the seed of that good old rose, the Globe Hip, but with smaller and more double flowers, of the same pure white; a pretty and distinct variety. *Blanchefleur* is of the most delicate flesh-colour, or nearly white; very distinct, and even now (1843) one of the finest roses known. *Cleliée* is a magnificent rose, of the largest dimensions, forming a very fine standard, as its branches are graceful and spreading. *Celinette* is also a very large and fine rose, of the most delicate flesh-colour, possessing in its habits all the characters of this division.

Duchesse d'Angoulême, or the Wax Rose, is an old but deservedly a favourite variety: its colour is so delicate and its form so perfect that it must always be admired; the habit of the plant is most luxuriant, and rather more erect than most other members of this family. *Enchantress grande Henriette*, or *Rose Parmentier*, for these, and I believe some others, are its synonymes, is an old and most beautiful variety, so double and finely-shaped that it may be considered a prize-rose of the first character.

Gracilis, or *Shailer's Provence*, is a very old and delicate-growing rose, unlike most other varieties of this family in its habit, as it seems to be between the *Boursault* and *Provence Rose*.

The *Globe Hip*, the "*Boule de Neige*" of the French, was raised from seed many years since at the *Hammersmith* nursery. This is now much

surpassed by some of our new white roses, but still it is a favourite variety. Its habit is most luxuriant; and if it is grafted on the same stem with George the Fourth, or some other vigorous-growing dark variety, the union will have a fine effect. The Glory of France is an immense rose, of the most luxuriant habit, having a fine effect grown as a standard, but, like some other very large roses, its flowers are irregularly shaped. La Volupté is a new variety, possessing in its bright vivid rose-colour, and perfect shape, all that can be wished for in a rose. L'Ingénue is most undoubtedly a descendant of the Globe Hip, with flowers of the purest white, the centre of the flower inclining to yellow; this is one of the finest white roses known, and, like the Globe Hip, it is of the most luxuriant habit. Lycoris is a new variety, of a fine vivid rose-colour, marbled and spotted in a very distinct and beautiful manner. Malibran is a distinct and good rose, with peculiar glossy foliage and shoots; it is not spreading and diffuse in its habit, but very erect, unlike any other rose in this division. This rose has not yet bloomed in full perfection in this country. Reine des Belges, a fine white rose, was classed in the catalogue of last season among the Hybrid China roses, but it is so evidently a seedling from the Globe Hip, that I have now placed it in this division: this rose, when it blooms in perfection, is one of the most double and beautiful in exist-

ence. The Tree Pæony Rose produces flowers rivalling in size those of the Pæonia Moutan, or Tree Pæony, but, as they are flat, irregularly-shaped, and not very double, it cannot long be a favourite with the amateur.*

To this family we have some interesting additions, particularly to White Roses, of which Melanie, or Melanie de Waldor, and the New Double Globe, or Boule de Neige à Fleurs pleines, are very perfect and beautiful varieties: the latter is also called Clarisse Jolivain; this is an improved variety of the Globe Hip.

To blush roses, Duchesse d'Orléans, one of the most elegant delicate-coloured roses known, and the Blush Globe, a seedling from the Globe Hip fertilised with the Tuscany, are valuable additions as prize roses. "Elisa Leker" is a new deep rose-coloured variety, spotted, of much beauty.

Very many beautiful roses have within the last three years been added to this class; one of the most distinct is Christine de Pisan, deep reddish pink, occasionally mottled; this is a very beautiful rose, and differs much in habit and flowers from all in this family. Emerance is also perfectly unique, and one is inclined to wonder how this peculiar colour could be gained: its flowers are most perfect in shape, and of a delicate straw colour, differing altogether from any other summer

* I have now placed this rose in my catalogue among the Damask roses, to which it is very nearly allied.

rose. Laura, with flowers very large, of a fine rosy blush, is a first-rate and most beautiful variety, deserving of all that can be said in its praise. Madame Huet and Rose Devigne are delicate blush roses much alike, and both beautiful; the latter has, perhaps, the larger flowers of the two. The colour of both is very similar, being a delicate blush. A new white rose, Princesse Clementine, has within the last season been introduced; this was raised at Angers, and is reported to be the finest and largest white rose known. Nero is a fine deep purplish red rose, grouping admirably with the, perhaps, too many pale roses in this family. Semilasso is also a deep-coloured and finely-shaped rose, equally worth a place in the rose-garden. Hypacia is a new variety of much beauty; flowers perfectly cupped, and of the most regular shape; colour deep pink, occasionally mottled: this is a distinct and charming rose.

Hybrid Provence roses are very robust and hardy, useful to the rose amateur, as serving to form a most delicate group of soft colours: they also make admirable standards, as the branches of most of the varieties are inclined to be spreading, diffuse, and of course graceful.

The seed-bearing roses of this family are the Globe Hip, the flowers of which should not be fertilised if pure white roses are desired. Some few years since I raised a plentiful crop of seedlings from this rose, fertilised with the Tuscany, nearly

all my plants produced semi-double blush and rose-coloured flowers; the Blush Globe was the only exception.

Blanchefleur, with Cleliée, would possibly produce seed from which fine shaped and delicate-coloured roses might be expected. The same with the Tuscany rose would most likely originate deep rose-coloured varieties, with finely-shaped cupped flowers.

HYBRID CHINA ROSES.)

(ROSA INDICA HYBRIDA.)

The superior varieties of this fine division give a combination of all that is or can be beautiful in roses; for, not only are their flowers of the most elegant forms and colours, their foliage of extreme luxuriance, but their branches are so vigorous and graceful, that perhaps no plant presents such a mass of beauty as a finely grown hybrid China rose in full bloom. They owe their origin to the China, Tea-scented Noisette and Bourbon roses, fertilised with the French, Provence, and other summer roses, and also to the latter crossed with the former; the seeds of such impregnated flowers producing hybrid China roses. These have, in many cases, resulted from accident, but latterly

from the regular fertilising process, as mules or hybrids have been raised from well known parents.

In England, but few varieties have been originated; as the common China rose does not in general ripen its seeds sufficiently for germination. The parents of Brown's Superb Blush, which is an English hybrid, raised by the late Mr. Charles Brown, of Slough, one of our most scientific and persevering cultivators, cut off in the prime of life, was the old Tea-scented rose, *Rosa indica odorata*, impregnated with some hardy summer rose. Rivers's George the Fourth is also an English rose; but as this came by accident, its origin is not so well ascertained. *Rosa Blairii* is also English, and raised from the yellow China, impregnated with some variety of hardy rose. All these roses have the true characters of the family: leaves smooth, glossy, and sub-evergreen: branches long, luxuriant, and flexible. They give a long continuance of bloom, but they never put forth secondary or autumnal flowers. This is a most peculiarly distinguishing trait, and an interesting fact. Impregnate a Bourbon, China, or Noisette rose, all abundant autumnal bloomers, with the farina of a French or Provence rose, and you entirely take away the tendency to autumnal blooming in their offspring. They will *grow* vigorously all the autumn, and give a *long*, but not a *secondary* series of flowers. Some of these hybrid China

roses produce seed abundantly, which is rather a remarkable feature, as so few hybrid plants are fertile.

Hybrids produced from the French rose impregnated with the China rose, are not of such robust and vigorous habits as when the China rose is the female parent; but, perhaps, this is an assertion scarcely borne out by facts, for the exceptions are numerous, and, like many other variations in roses and plants in general, seem to bid defiance to systematic rules. By some cultivators the roses of this division have been much more divided than in my catalogue, forming "Hybrid Noisettes," "Hybrid L'Isle de Bourbons," &c. &c.; but as these all owe their origin to the common China rose, their offspring may with justice be called Hybrid China roses. I have, however, found the Hybrid Bourbon roses distinct in their characters, and they now form a group, or division, in the catalogue.

Those that have been raised from Noisette roses have a tendency to produce their flowers in clusters; those from Bourbon roses have their leaves thick, leathery, and round; those from the Tea-scented have a delicate and grateful scent; but all have those distinguishing family traits as before given, and accordingly they group beautifully. As this is the grand object of the amateur cultivator, it seems far more preferable to arrange them as one family, than to make several divisions

with but very minute distinguishing features. It is a difficult task to point out the best in this division, as they are nearly all well deserving of cultivation. However, by making a few remarks, such as cannot be given in a descriptive catalogue, I may perhaps be able, in some measure, to direct the choice of amateurs to those most worthy their notice.

Adolphe Cachet is a rose not much known; but a very double, well shaped, and distinct variety. Attelaine de Bourbon, the Athelin of some French catalogues, is a Hybrid Bourbon rose, scarcely double enough, but exceedingly beautiful. It has finely shaped flowers, and blooms in large and erect clusters; its colour is of that vivid rose so peculiar to the Bourbon roses. As this bears seed freely, it will probably be the parent of numerous fine varieties.

Bonne Geneviève. This rose, under the name of "Beauté ethereal," and described as "purple margined with crimson," has been sold extensively. It is a most beautiful and perfectly imbricated rose. Brennus, the Brutus of some collections: this very superb rose will form a finer object as a pillar rose* or standard than as a bush; its luxuriant shoots must not be shortened too much in winter pruning, as it is then apt to produce an

* All the roses to which this term is applied make very long and flexible shoots, well adapted for training up a column, thus forming a pillar of roses.

abundance of wood, and but very few flowers. This rose often puts forth branches in one season from eight to ten feet in length: if these are from a dwarf, and are fastened to a wooden or iron stake, and *not shortened*, the following season they will form a pillar of beauty but rarely equalled. *Blairii*, a rose not so much known as it deserves to be, is a very distinct and unique variety, so impatient of the knife, that if pruned at all severely, it will scarcely put forth a flower: it is perhaps better as a pillar rose, than grown in any other mode, as it shoots ten or twelve feet in one season, and its pendulous clusters of flowers which are produced from those long shoots unshortened, have a beautiful effect on a pillar. *Beauty of Billiard* is, of all roses, the most glowing and beautiful: its colour is described in the catalogue as scarlet; but it is rather a fiery crimson, so vivid, that it may be distinguished at an immense distance. This rose also requires care in using the knife; the extreme tips of the branches may be cut off, and some of them thinned out; it will then bloom in great perfection, but care must always be taken in winter pruning to leave its shoots nearly their full length. *Becquet* is a pretty distinct dark crimson flower, very double and well shaped. *Belle Marie* is a first-rate rose, finely shaped, and a good show-rose. *Belle Parabere* is a very remarkable variety of inconceivable luxuriance; its flowers are very large: it will in

good soils, as a standard, soon form a large umbrageous tree. Belle de Rosny is a hybrid Noisette, blooming in very large clusters, of first-rate quality. Catel is one of our finest dark roses, very double, and finely shaped, quite worth the notice of the amateur. Coccinea superba, or "Vingt-neuf Juillet," is a rose alike beautiful in its flowers and foliage; in early spring its leaves and shoots are of a most vivid red, and this appearance they retain the greater part of the summer; its flowers are brilliant in the extreme, crimson purple shaded with scarlet: the shoots of this rose must also be left at nearly their full length.

Coupe d'Amour richly deserves its name, for it is a beautiful neat rose, quite perfect in its form and colour.

Coronation is one of those purple shaded roses, inclining to slate, imbricated, and very perfect in its shape. Chatelaine is a hybrid Bourbon rose, dove-coloured, finely shaped, and very good. Coutard may be safely recommended as a most perfect and good rose, flowering with great freedom, and beautiful either as a dwarf or standard. Colonel Fabvier, also a sterling good rose, is remarkable for its delicate fragrance. The Duke of Devonshire is an imbricated rose, one of the great favourites of the day, and most deservedly so, for its rosy lilac petals are so delicately striped with white, and its shape is so perfect, that it will always be admired. Duc de Choiseul is not a

new variety; but as it is between the China and Provence rose, which is a species of hybridisation not very common, it is interesting; it forms a very fine standard. Duc de Choiseul ponctuée, or the spotted, is a most distinct and pretty variety, a hybrid between the China and Provence rose; it is so nearly allied to the latter, that in the catalogue it is placed with the Provence roses: this makes long and slender shoots, and is well adapted for a standard. Daphne is a hybrid Bourbon, and one of the most beautiful of roses: it has the brilliant colour of that interesting group, and the fine foliage, but its flowers are much more double than the generality of Bourbon roses. Dr. Guepin is a most perfect shaped, globular rose, quite distinct in its character: this, with a few others, which will be noticed in their turn, have beautiful spherical-shaped flowers, singular and pleasing. Eugene Barbet is also one of these finely formed roses, with dark purplish crimson flowers of first-rate excellence. Elizabeth Fry is a hybrid Noisette, blooming in large clusters, a most brilliant and pleasing rose. Fulgens, or the Malton rose, is certainly one of the most brilliant and beautiful of roses; the entire plant is also worthy of admiration, independent of its magnificent globular scarlet flowers, as its foliage is so abundant, and so finely tinted with red; its branches so vigorous, and yet spreading so gracefully, that it forms one of the very finest of standard roses.

Fleurette offers quite a contrast in its small delicately-coloured, and finely shaped flowers; it is a desirable and pretty variety. Fimbriata is a most curious and beautiful rose: each flower-leaf is cut something like the petals of a pink, and as it is imbricated, it looks more like a large self-coloured carnation than a rose. General Lamarque is one of the darkest of roses, a most luxuriant grower, and very distinct: in wet weather it is apt to lose its colour, and to change to a dull brown.

(Rivers's George the Fourth is still, perhaps, one of the best of this family: it was raised from seed by myself, about twenty years ago, and contributed probably more than any thing to make me an enthusiastic rose cultivator.* It is now much esteemed in France, where it is comparatively a new variety.) Grilony is a new and fine rose, of a purplish slate colour, and first-rate form

* I hope to be pardoned the digression, but even now I have not forgotten the pleasure the discovery of this rose gave me. One morning in June I was looking over the first bed of roses I had ever raised from seed, and searching for something new among them with all the ardour of youth, when my attention was attracted to a rose in the centre of the bed, not in bloom, but growing with great vigour, its shoots offering a remarkable contrast to the plants by which it was surrounded, in their crimson purple tinge; upon this plant I set my mark, and the following autumn removed it to a pet situation. It did not bloom in perfection the season after removal, but, when established, it completely eclipsed all the dark roses known, and the plant was so vigorous that it made shoots more than ten feet in length in one season. This plant is still living, and nearly as vigorous as ever.

and character. *Hybride blanche* is a hybrid *Noisette* blooming in clusters, and a pretty neat white rose a little tinged with rose colour. *Hypocrate* is a most superb variety, one of the finest of its class, and well adapted for a show-rose: this is not the *Hypocrate* of many catalogues, or of the French cultivators, which is a hybrid *Bourbon*, an inferior variety. The *King of Roses*, or *Sauveur panachée*, is a rarity among hybrids, for it is finely striped, and as yet so few variegated roses are in this class: till these few last seasons never has it bloomed in perfection, or in fact scarcely at all, owing to its having been pruned too much: like some few others mentioned, its branches may be thinned, but scarcely at all shortened: this rose will form a fine pillar, and a standard of the largest size, as it grows with extraordinary luxuriance and vigour. *Legouv* is a hybrid *Bourbon* rose, and quite first-rate in form and colour: this may be grown for a prize or show-rose. *Lady Stuart*, like the *Duke of Devonshire*, is a gem of the first water, for no rose can surpass it in beauty; the form of the flowers before expansion is perfectly spherical, and exceedingly beautiful. This rose, for some years to come, must and will be a favourite. *La Grandeur* is, perhaps, nearly as much to be admired, but for qualities quite opposite, as this is when quite open an imbricated rose, exceedingly regular and pleasing in its form. *Las Casas* is a

hybrid Bourbon of the most robust habit, producing very large flowers, nearly the colour and shape of the common cabbage rose. Lusseldembourg is a fine spherical-shaped rose: its flowers are of a bright rosy lilac, very beautiful and distinct. Monteau and Miaulis are both good dark roses; but they are certainly surpassed by Miralba, which has recently been named "Chevrier:" this is not a large rose, but decidedly one of the most brilliant and beautiful dark crimson roses we possess. Moyena, a bright purplish rose, has flowers very double and finely shaped; it will prove a good show-rose. Ne Plus Ultra, the Pallagi of two or three rose cultivators, and called also Gloire des Hybrides, is now an established favourite. Like many others of this division it is not at all adapted for a show-rose; its flowers resemble in colour the red stock, and are singularly brilliant.

Princess Augusta is an English rose, a vigorous grower, and well adapted either for a pillar rose or a standard. Petit Pierre is one of those rapid and diffuse growing roses, like Belle Parabere and the King of Roses in luxuriance and vigour of growth; this is one of the largest and the most double of hybrids, and when grown as a standard, forms a magnificent tree. Pomponne bicolor is rather a small, but well-shaped rose, its centre inclining to scarlet, with outer petals of fine crimson purple, a most distinct and desirable

rose. *Reine de Belgique* rivals *Lady Stuart* in the fine and perfect shape of its flowers; this rose has been sold for *Reine des Belges*, a hybrid *Provence*; but, as that is of the finest white, and this of a rosy lilac, the cheat is soon detected. *Riego* is between the *China* rose and the sweet briar, a remarkable, but most pleasing union, as it has the most delicious perfume. *Rosine Dupont* is a very pale flesh-coloured rose, with remarkable glossy foliage, and erect growth, very distinct and pretty. *Sapphirine* is one of the largest globular roses known, and most astonishingly robust and vigorous in its habit: in a very few years, in a strong soil, this rose would form a tree of the largest size. *Souvenir d'une Mère* is a large rose, of that delicate but bright rose-colour, always so much admired. Its flowers are not so double as some other varieties, but very large and magnificent. *Triomphe de Laffay* is a beautiful rose, not of a pure white, but rather what is called *French white*, the outer petals inclined to rose-colour. *Triomphe de Guérin*, a very large pale rose, much resembles *Lady Stuart*, differing only in having the centre of its flowers of a warm rose-coloured tint: this is a most beautiful and distinct variety. *Triomphe d'Angers* is perfectly unique, and no rose can be more deserving of admiration. Its perfume is much like ripe fruit, and its singularly brilliant crimson flowers are often striped with white: these two

last-mentioned varieties are finer grown as standards than in any other mode, as their flowers are large and pendulous. Titus is a remarkably pretty purple rose, blooming in large clusters. Its flowers are not large, but finely shaped and very distinct. Victor Hugo, one of the finest of the lilac-coloured roses, deserves a place in every collection. It produces flowers of the very largest size, globular, and finely shaped. This is a very erect growing rose, and may be cultivated either as a standard or a dwarf. Velours Episcopal is a new and beautiful variety, perfectly globular, of a fine crimson purple, inclining to the latter colour. Wellington is now an old rose: for some time thought to be the same as Bizarre de la Chine, but now found to be quite different in its habit and growth, though its flowers have an exact resemblance.

As with French roses, the new varieties of this family are too numerous for detailed descriptions, but Saint Ursule, Comtesse de Lacepede, and Adalila ought not to be passed over; they are all of the most perfect shape and delicate tints. As rose-coloured roses, Charles Duval, and Richelieu, are quite perfection in the form of their flowers, and for vivid rose-coloured varieties, Lord John Russell, General Allard, and Louis Fries, cannot be too much recommended; they are all truly beautiful. Charles Duval and Lord John Russell are hybrid Bourbon roses, and it is

remarkable that hybrids of that family are nearly always first-rate; their habits are also generally pleasing, as they are of compact growth and fine foliage. Potart, Decandolle, Colonel Combes (hybrid Bourbon), and Larochefoucault are vivid red roses of great beauty.

To Hybrid China Roses but very few really good roses have been added; to one variety, however, too much attention cannot be directed, and this is *Chenédolé*, so called from a member of the Chamber of Deputies for Calvados, a district in Normandy, where this fine rose was raised. It has often been asserted that no rose could compete with *Brennus* in size and beauty; but I feel no hesitation in saying, that in superior brilliancy of colour, and size of flower, this variety is superior; the foliage and habit of the plant are also much more elegant and striking; in colour its flowers are of a peculiar glowing vivid crimson, discernible at a great distance: it is indeed an admirable rose, and cannot be too much cultivated. *Le Météore* is from the same origin; in colour bright rosy red, very striking, and when blooming in large clusters on the plant, always much admired. *Julia* is a peculiarly elegant-shaped rose; in colour brilliant, rose very distinct in habit and character, as is also *Jenny*, in colour rather a deep rose, with flowers beautifully cupped.

Prince Albert, raised by Mr. Hooker, of Brenchley, Kent, is remarkable for its perfect

and most elegantly-shaped flowers, most regularly cupped; colour delicate yet vivid pink. Triomphe de Laqueue is another of these most elegantly-shaped cupped roses, blooming in large clusters; colour deep yet vivid rose, slightly tinged with lilac.

Among Hybrid Bourbon Roses we have two or three, of recent introduction, surpassingly beautiful; and to no rose can this term be applied with more justice than Coupe d'Hébé; in habit most robust, with foliage glossy, sub-evergreen, and abundant; flowers large, and most perfect in shape, with petals thick and wax-like; colour delicate pink, changing to blush: so delicate and beautiful is this rose, that no description can do justice to it. The Great Western is a rose totally different to the preceding; this is not a delicate but a *grand* rose. Those who know the old rose, Céline, may at once form an idea of the habit of this rose, which is even more robust, and has made shoots this season more than six feet in length, and thick as a moderate sized cane; its leaves are enormous, and measure from the base to the tip 9 inches, leaflets $3\frac{1}{2}$ by 2 inches; its large clusters of flowers are produced with from ten to fifteen in each, but as these are often too much crowded to expand properly, it is better to thin each cluster, removing about half the buds; the flowers of this truly gigantic rose, are of a peculiar deep rich red, sometimes tinted with purple; they are

variable according to the season, but their prevailing colour is as described. Budded on stout stocks of the dog-rose, this variety will form a large umbrageous tree*, it will form also a fine pillar rose, and as a bush budded on a two-feet stem, so that the whole plant is taken at once by the eye: it will give a magnificent mass of flowers at one view. Hortense Leroy is also a most elegant and beautiful rose; foliage small, glossy, and distinct, flowers very perfect and double, colour pale rose. Ernest Ferray and Elise Mercœur are most robust-growing and beautiful roses. Richelieu (Duval) is perfectly beautiful in its flowers, but its habit is meagre, and unlike all others of this generally robust family. Dombrowski and Sylvain are two most beautiful brilliant roses, deep in colour, and well worthy a place in the group. The first is occasionally almost scarlet, and, like all these hybrid Bourbons, has thick leathery petals; the second is a perfect and fine rose, of a brilliant crimson. A bed of roses of this family, on stems of one to two feet in height, will form one of the most ornamental groups in the rose-garden.

With but few exceptions hybrid China roses may be cultivated as standards to advantage, as their growth is luxuriant and umbrageous, some of the most robust-growing varieties forming im-

* In the "Rose Garden, No. 5," *Gardeners' Chronicle* for 1843, p. 356, I have described this rose and its peculiar habit.

mense heads. To keep them in a healthy state, lay round their stems, on the surface of the soil, in winter, a good proportion of manure; and mind that before the blooming season commences this is added to, as they require the surface of the soil moist when in flower: they will also continue much longer in bloom if this is attended to.* The great objection to this summer surface-manuring, with English gardeners, is its unsightly appearance, particularly round trees on well-dressed lawns: this may be soon obviated, by covering the manure with some green moss; and to keep the birds from disturbing it, which they will do after worms, place on the moss some pieces of rock, or flints, thus forming an ornamental mound. In France roses are cultivated with much and well-rewarded care; for even standards of thirty years growth have, every spring, a large quantity of manure laid on the surface round their stems.

* The following note from the Catalogue of 1843, will be found of value:—

“ I may, perhaps, venture to give the results of some experiments made this last season with roses.

“ I have found night-soil, mixed with the drainings of the dunghill, or even with common ditch or pond water, so as to make a thick liquid, the best possible manure for roses, poured on the surface of the soil twice in winter, from one to two gallons to each tree. December and January are the best months: the soil need not be stirred till spring, and then merely loosened two or three inches deep with the prongs of a fork; for poor soils, and on lawns, previously removing the turf, this will be found most efficacious.

This keeps the extreme heat of the sun from penetrating to their roots; and as they are abundantly watered in hot weather, it also prevents that rapid evaporation which would otherwise take place, so often rendering watering useless. This practice is, after all, only imitating nature, for the Dog Rose, upon which all the fine varieties are grafted, grows naturally in woods and shady places; consequently, it is impatient of exposure in hot, dry soils and situations.

For rose beds on lawns the roses of this division are finely adapted, as they form such a mass of foliage and flowers. They may also be formed into a regular bank, rising gradually from the edge, by having dwarfs of different heights, and “petites tiges,” or dwarf standards, in the background. They bloom remarkably fine on these little stems, and as the stem is protected from the sun by the branches of the plant, it increases in thickness much faster than when taller; tall stems, owing to exposure, are apt to become bark-bound and unhealthy, increasing but slowly in girth, and often requiring support. To have hybrid China roses in perfection as pillar roses, they require attention, and a superabundance of manure; but they will amply repay it, for a column twelve to twenty feet high, covered with such roses as *Brennus*, *Blairii*, *Belle Parabère*, *Coccinea superba*, *Fulgens*, *Fimbriata*, *General Lamarque*, *George the Fourth*, *King of Roses*, *Petit Pierre*,

or *Triomphe d'Angers*, &c. &c., would be one of the finest garden ornaments it is possible to conceive. To make these varieties grow with the necessary luxuriance each plant should have a circle, three or four feet in diameter, to itself; and if the soil is poor it should be dug out two feet in depth, and filled up with rotten mature and loam. This compost must be laid considerably (say one foot) above the surface of the surrounding soil, so as to allow for settling: in shallow or wet soils they will grow the better for being on a permanent mound. Plant a single plant in the centre of this mound, or, if you wish for a variegated pillar, plant two plants in the same hole, the one a pale-coloured or white, the other a dark variety: cover the surface with manure, and replenish this as soon as it is drawn in by the worms or washed in by the rains. Water with liquid manure in dry weather, and probably you will have shoots eight to ten feet in length the first season. I scarcely know whether to recommend grafted roses on short stems for this purpose, or plants on their own roots; this will in a great measure depend upon the soil, and perhaps it will be as well to try both. Most roses acquire additional vigour by being worked on the Dog Rose, but some of the robust varieties of this family grow with equal luxuriance when on their own roots; finally, for dry and sandy soils I am inclined to recommend the latter.

I shall now proceed to give a list of those roses from which, in combination with others, choice seedlings may be raised.

Aurora, a most beautiful purple rose, often striped with white, may be made a seed-bearing rose of much interest; if self-coloured roses are desired it should be planted with Athelin, which has abundance of pollen; if striped and variegated roses, the Village Maid rose may be planted with it. The Duke of Devonshire, in a very warm and dry soil, will produce hews in tolerable abundance; and as it is inclined to be striped, it would possibly form a beautiful combination with the French rose Tricolor, which should be planted with it.

Souvenir d'une Mère, a very large and most beautiful rose, will bear seed if fertilised; the best union for this rose would perhaps be Celine, which is one of the most abundant seed-bearing roses we possess: very large and brilliant rose-coloured varieties would probably be originated from these roses in combination.

Riego, which partakes of the sweet briar, might be made the parent of some beautiful briar-like roses by planting it with the Splendid Sweet Briar.

General Allard, a hybrid Bourbon rose, from which Monsieur Laffay has raised his new perpetual rose, "Madame Laffay," is much inclined to give a second series of flowers; this rose should

be planted in a very warm border, or trained against a south wall with Bourbon Gloire de Rosomène, and if carefully fertilised with it some beautiful crimson autumnal roses would probably be originated.

Henry Barbet is also a hybrid Bourbon rose of great beauty. This should be planted with Triomphe d'Angers, with which it may be fertilised, but as the latter has but a small portion of pollen, and the former a great abundance, the process may be reversed; if seed can be procured from Triomphe d'Angers it must produce fine flowers, as it is one of the most beautiful and fragrant of roses.

Petit Pierre, although very double, bears abundance of seed; as this is a fine and large rose deepness of colour might be given by planting it with the French rose, La Majestueuse. Legouv with the Tuscany would probably originate a fine class of rich dark crimson roses, of which at present we possess but few that are really perfect in form and colour. Time will most probably put us in possession of many other seed-bearing hybrid China roses; at present, those recommended are all that can be depended upon.

THE WHITE ROSE.

(ROSA ALBA.)

Rosa Alba, or the White Rose, so called because the original species is white, is a native of middle Europe, and was introduced to our gardens in 1597. In some of the old farm and cottage gardens of Hertfordshire and Essex a semi-double variety is frequent; this is but a slight remove from the single flowering original species, and grows luxuriantly without culture in any neglected corner. The roses of this division may be easily distinguished by their green shoots, leaves of a glaucous green, looking as if they were covered with a greyish impalpable powder, and flowers generally of the most delicate colours, graduating from pure white to a bright but delicate pink.

Attila is one of the deepest coloured varieties of this division, with large and partially cupped flowers of a perfect shape. Belle Clementine, an old but very pretty variety, a hybrid departing in a slight degree from the characters of the group, often produces flowers finely mottled; it is a luxuriant grower, and forms a fine standard. Blanche Superbe, or Blanche de Belgique is a much older variety than the preceding, with all the characters of this division, and producing very large and double flowers of the purest white. Blush hip is a hybrid, possessing more of the characters of this

division than of any other, consequently it is placed in it: this is a fine and free-growing rose always beautiful. *Bullata* is a curious but pretty variety, with large foliage and tinted white flowers, forming a robust and fine standard. *Camelliæ-flora*, a small but very pretty pure white rose, with cupped flowers, possesses all the characters of the species, and is quite worthy of cultivation. *Duc de Luxembourg*, a hybrid, is a most beautiful and unique rose, producing globular flowers of the largest size: the exterior of the petals is almost white, the interior of a bright rosy purple, at once singular and pleasing. *Fatime* is a pretty rose, its colour not pure white, but tinted with a delicate pink in the centre of the flower; this is peculiar to roses of this family, and in general it is very pleasing. *Fanny Sommerson*, a new and very fine variety, is a most robust grower, producing rose-coloured flowers, extremely double, and finely shaped, a little imbricated, but so perfect that this variety may be considered a good show-rose. *Félicité* is also a new and beautiful rose; its flowers are exactly like a fine double ranunculus, of a most delicate flesh-colour: this is a distinct and fine rose.

Ferox is a most anomalous variety of this family, for most of its members are thornless, but this is completely covered with those fierce defenders; its flowers are of a pretty tinted white, very double and perfect. *Josephine* and *Josephine*

Beauharnais must both be mentioned, as they are so often confounded: the first is a most robust grower, producing in large clusters flowers not very double, of a delicate pink; the latter has large globular flowers, very double, white, tinted with rosy buff. *La Séduisante* is most appropriately named; it is not a new variety, but a rose most perfect in shape and beautiful in colour. *Madame Campan* is a hybrid departing a little from the characters of the species, but producing flowers of a bright rose finely mottled with white, of first-rate excellence. *Princesse de Lamballe* is one of the finest in this division, possessing all the characters of the species in its foliage, branches and flowers: these are of the purest white, and of the most perfect and beautiful shape. *Queen of Denmark*, an old but estimable variety, produces flowers of first-rate excellence as prize-flowers: so much was this esteemed when first raised from seed, that plants were sent from Germany to this country at five guineas each. *Sophie de Marsilly*, a new variety is a most delicate and beautiful mottled rose, with flowers very double and perfect in shape. *Viridis* is the far-famed green rose of France, which has several times been brought to this country and sold as a great rarity: it is curious, for its flowers are nearly green till fully expanded.

The varieties of this family form a beautiful mass, not by any means gay and dazzling but

chaste and delicate, and contrast well with groups of the dark varieties of *Rosa gallica* and hybrid China roses; they also make good standards, often growing to a large size and uniting well with the stock: they always bloom abundantly and bear close pruning; in this respect they may be treated as recommended for the French roses.

THE DAMASK ROSE.

(*ROSA DAMASCENA.*)

The “Damask Rose” is a name familiar to every reader of English poetry, as it has been eulogised more than any other rose, and its colour described with a poet’s licence. In these glowing descriptions the truth, as is frequently the case in poetry, has been entirely lost sight of; for in plain unvarnished prose it must be stated that the original Damask Rose, and the earlier varieties, such as must have been the roses of our poets, though peculiarly fragrant, are most uninteresting plants; however we must not ungratefully depreciate them, for they are the types of our present new, beautiful, and fragrant varieties. The original species with single flowers is said to be a native of Syria, from whence it was introduced to Europe in 1573: varieties of it are still grown in the gardens of Damascus. The branches of the Damask rose are green, long, and diffuse in their

growth; leaves pubescent, and in general placed far asunder; prickles on most of the varieties abundant. To those old members of this family, the red and the white monthly, which by some peculiar excitability often put forth flowers in warm moist autumns, nearly all our perpetual roses owe their origin, so that we can now depend upon having roses as fragrant in October as in June. The York and Lancaster rose, with pale striped flowers, is one of the oldest varieties of this division in our gardens. There is perhaps a little too much sameness of character in some of the varieties of the Damask rose; their gradations of colour are sometimes too delicate to be distinct, but the following may be depended upon as fine leading sorts.

Arlinde, a beautifully-formed rose, of a delicate rose colour, is not a pure damask, as its foliage is less pubescent than in some other varieties. Angèle is a pretty bright-coloured rose, very double and distinct. Blanche bordé de Rouge is a fine rose when it opens well, but in moist weather its petals are too numerous to expand freely; sometimes its flowers are pure white, at others finely margined with purplish red. Bachelier, so named from a Belgian amateur, is one of the finest show-roses in this division, producing large double compact flowers, of a fine rose-colour, and very perfect shape. Climéne is a new variety with rather small beautifully-shaped flowers of a very brilliant

rose colour. *Couronne Blanche* is a pure Damask rose, distinct in habit, and a pretty white variety. *Coralie* is a beautifully formed rose, of a pale flesh-colour, with rosy centre, to which several of this family are inclined. *Déesse Flore* is a first-rate variety, with flowers rather larger than *Coralie*, and much like it in colour: when about half expanded they are most beautiful.

Imperatrice is not a pure Damask rose, but very nearly allied. This is a large compact rose, very robust, and distinct in habit. *La Fiancée* seems a hybrid between the *Globe Hip* and the Damask, a pretty shaded rose, nearly white, with a pale rosy centre. *La Ville de Bruxelles* is a new variety, with rose-coloured flowers, very large and double: this is a distinct and fine rose. *Lady Fitzgerald* is a beautiful rose, most valuable in this division, as its brilliant rose-coloured flowers are so conspicuous in a clump of Damask roses; this is not a pure Damask rose, but very nearly so: its foliage when young is a little stained with the colouring matter of some variety of *Rosa gallica*, which much adds to its beauty. *Ma Favorite* is a very small rose, of a delicate flesh-colour, and exceedingly neat and pretty. *Madame Hardy* was raised from seed in the Luxembourg gardens, by Monsieur Hardy in 1832; this is not a pure Damask rose, as its leaves have scarcely any pubescence; but a more magnificent rose does not exist, for its luxuriant habit and large and

finely shaped flowers place it quite first among the white roses.

Madame de Maintenon is a pretty delicate rose with deeper colouring towards its centre: this is a new variety, and has not yet bloomed quite in perfection. Mohéléda is a hybrid Damask, with large double rose-coloured flowers, prettily marbled: this is a new and good rose. The Painted Damask is a rose which for some time to come will be a favourite, as it is distinct and beautiful; its large and thick foliage and painted flowers are quite unique, but, like most of the variegated roses, it is a little inconstant, as its flowers are sometimes pure white; in general, however, the outer edge of each petal is tinged with a fine purple.

Some pretty and interesting varieties have lately been added to these favourites of the poets. The Duke of Cambridge—which I at first thought a Hybrid China, will perhaps be better grouped with the Damask roses, of which it largely partakes—is a very fine rose, of a vivid rose colour, and robust luxuriant growth. Belle d'Auteuil is a large and perfect show-rose of great beauty when flowering in perfection. Bella Donna is a true Damask rose, bearing a profusion of delicate pink or bright rose-coloured flowers. Adonis, as a pretty pale blush or rosy white variety, is quite worth cultivation.

Some new Damask roses, of deeper colours than we have hitherto possessed, now give an increased

interest to this elegant family: among these, Châteaubriand is remarkable for its brilliant red flowers, very perfect and beautiful in shape. Louis the Sixteenth has flowers rather deeper in colour than the preceding: this is a distinct and good rose: but La Nègresse is by far the darkest Damask rose known; its flowers are of a deep crimson purple. Blanche Davilliers and Pulcherie are two pure white roses; the latter, in particular, most elegant and beautiful. Semiramis is quite novel in colour, and a most perfect and beautiful rose: the centre of the flower is of a bright fawn-colour, its marginal petals are of a delicate rose. This fine variety ought to be in every collection. Penelope is remarkable for its fine foliage; the edges of its leaves tinged with red; flowers of a very deep rose, globular, large, and distinct.

The roses of this neat and elegant family have a pretty effect arranged in a mass; like the varieties of *Rosa alba*, they are so beautiful in contrast with the dark roses: they also form fine standards, more particularly Madame Hardy and the Painted Damask, which will grow into magnificent trees, if their culture is attended to. The pruning recommended for *Rosa gallica* will also do for these roses.

The only roses of this family that bear seed freely are the Purple Damask or Jersey Rose, which should be planted with Imperatrice. From this union large and very double roses might be

expected; and the Painted Damask, if some of its central petals were removed, would probably bear seed: if fertilised with the Purple Damask some fine variegated roses might possibly be originated. Bella Donna with Lady Fitzgerald would produce some brilliant coloured roses, which are much wanted in this family.

THE SCOTCH ROSE.

(*ROSA SPINOSISSIMA.*)

The varieties of this distinct and pretty family owe their origin to the Dwarf Wild Rose of the North of England and Scotland, nearly all of them having been raised from seed by the Scotch nurserymen: in some of their catalogues two or three hundred names are given, but in many cases these names are attached to flowers without distinctive qualities. In my catalogue the names of a few of the best varieties are given, but even these vary much with the seasons; for I remarked that in the summer of 1836, after the peculiar cold and ungenial spring, and again in 1837, they departed much from their usual characters, and bloomed very imperfectly; in warm and early seasons they flower in May, and are then highly ornamental.

The following varieties have generally proved good and distinct. Aimable Etrangère, a French

hybrid with very double pure white flowers. Adelaide, a large red rose, double, and a good variety. Blanda is one of the best of the numerous marbled Scotch roses, as these are generally much alike. Countess of Glasgow, Daphne, Erebus, and Flora, are all good vivid-coloured dark roses, varying in their shades, and very pretty. Guy Mannering is a large and very double blush rose, distinct and good. La Cenomane is a French hybrid, pure white, with large and very double flowers; a beautiful rose, but not so robust as the pure Scotch varieties. La Neige is deserving of its name, for it is of the purest white, and very double and good. Lady Baillie, Marchioness of Lansdowne, and Mrs. Hay, are all pretty, pale sulphur-coloured roses: from the seed of these it is very probable that some good yellow varieties may, at some future time, be raised.

Painted Lady is a French hybrid; white, striped with red, but rather inconstant, as its flowers are often pure white: when it blooms in character, it is a charming little rose. Princess Elizabeth and the Queen of May are both bright pink varieties, very distinct and pretty. The True Yellow is a hybrid raised in France, and in most seasons is a pretty sulphur-coloured rose, much admired; but in very hot weather it fades very soon to white: this was the case more particularly this summer (1837); it seemed much influenced, in common with the other Scotch roses, by the

cold spring and the rapid transition to hot weather. William the Fourth is the largest white pure Scotch rose known; a luxuriant grower, and a good variety. Venus is an excellent dark rose, with very double flowers and distinct character.

Scotch roses may be grown as standards, and the yellow, and one or two of the more robust varieties, made good heads; but in general they form a round and lumpish tree, in ill accordance with good taste: when grown in beds or clumps, as dwarfs, they are beautiful, and in early seasons they will bloom nearly a fortnight before the other summer roses make their appearance; this, of course, makes them desirable appendages to the flower-garden. They bear seed profusely; and raising new varieties from seed will be found a most interesting employment. To do this, all that is required is to sow the seed as soon as ripe, in October, in pots or beds of fine earth, covering it with nearly one inch of mould; the succeeding spring they will come up, and bloom in perfection the season following.

With the exception of La Cenomane, Painted Lady, and the True Yellow, all the Scotch roses bear seed most abundantly: if this seed is sown indiscriminately numerous varieties may be raised, and many of them very interesting; but the aim should be to obtain varieties with large and very double crimson flowers: this can only be done by slightly hybridising, and to effect this it will be

necessary to have a plant or two of the Tuscan, and one of Superb Tuscan, or La Majestueuse, trained to a south wall, so that their flowers are expanded at the same time as the Scotch roses in the open borders: unless thus forced they will be too late. Any dark red varieties of the Scotch roses, such as Venus, Atro Rubra, or Flora, should be planted separately from others, and their flowers fertilised with the above French roses: some very original deep-coloured varieties will probably be obtained by this method. Sulphurea and one or two other straw-coloured varieties may be planted with the Double Yellow Austrian Briar, and most likely some pretty sulphur-coloured roses will be the result of this combination.

THE SWEET BRIAR.

(ROSA RUBIGINOSA.)

Who knows not the Sweet Briar? the Eglantine, that plant of song, the rhyme of which jingles so prettily, that nearly all our poets, even love-stricken rustics, have taken advantage of its sweet sound.

“ I will give to my love the Eglantine,”

has been often the beginning of a country lover's song; but in sober truth, every one must love this simplest and sweetest of flowers, for what odour

can surpass that emanating from a bush of Sweet Briar in the dewy evenings of June? It pleases not the eye, for the single Sweet Briar bears flowers, in comparison with other roses, quite inconspicuous; but it gratifies in a high degree by its delicious perfume, and gives to the mind most agreeable associations, for it is so often (at least in Hertfordshire) the inhabitant of the pretty English cottage-garden — such a garden as one sees nowhere but in England. The Single Sweet Briar is a native plant, growing in dry and chalky soils in some of the southern counties; from it the following varieties, with some others, have been originated, more or less hybridised. The Cluster Sweet Briar, with semi-double rosy lilac flowers. The Celestial, a beautiful little rose, with flowers very double and fragrant, of the palest flesh-colour, approaching to white. Hessoise, or Petite Hessoise, is a pretty French hybrid, with bright rose-coloured flowers, and leaves not so fragrant as some others. The Monstrous Sweet Briar is a very old variety, with large and very double flowers, distinct and good. Maiden's Blush and Manning's Blush are both double and pretty, with fragrant leaves like the original. Rose Angle Sweet Briar is a new variety, raised from seed by Mr. Martin, of Rose Angle, near Dundee: this produces large and very double flowers, of a bright rose-colour; its foliage is also very fragrant. The Splendid Sweet

Briar is really a splendid rose, with large light crimson flowers, but its foliage is not very fragrant. The Scarlet, or La Belle Distinguée, or Lee's Duchess, or La Petite Duchesse, for they are one and the same, is a pretty bright red, small, and compact rose, very distinct and good, but its leaves are entirely scentless.

Sweet Briars form a pretty group, interesting from their origin and associations, and pleasing from their fragrance and peculiar neatness; they make also pretty trees, particularly on "petites tiges," as the French term them: they require the same culture as the other hardy roses.

Humble as are the claims of the Sweet Briar when contrasted with the gorgeous beauty of some of our new roses, yet it is so decidedly English, that raising new varieties from seed will I am sure be found interesting.

The Scarlet may be planted with the Splendid Briar, which so abounds in pollen that fertilising will be found very easy. The Carmine with the semi-doubled Scarlet will also give promising seed; the beauty of their flowers might be increased by hybridising with some of the French roses, but then their Sweet Briar-like character would be lost, and with that a great portion of their interest.

The Hybrid China Rose, Riego, if planted with the Splendid Briar, would produce seed from which large and very fragrant double roses might

be expected, and these would partake largely of the character of the Sweet Briar.

THE AUSTRIAN BRIAR.

(*ROSA LUTEA.*)

The Austrian Briar, a native of the South of Europe, is found on the hills of the North of Italy, producing copper or red, as well as yellow flowers; but, strange to say, though the flowers are invariably single, yet they never produce seed. In this country also it is with extreme difficulty, and only by fertilising its flowers, that seed can be perfected: if the flowers are examined they will all be found deficient in pollen, which accounts for this universal barrenness. A Double Copper Austrian Briar is yet a desideratum.

The Copper or Red Austrian, the Capucine of the French, is a most singular rose; the inside of each petal is of a bright copper red, the outside inclining to sulphur: this rose is most impatient of a smoky atmosphere, and will not put forth a single bloom within ten or twelve miles of London. The Double Yellow, or Williams's Double Yellow Sweet Briar, is a pretty double rose, raised from the Single Yellow Austrian by Mr. Williams, of Pitmaston, a few years since: this blooms more freely than the original species, and is a most desirable variety. *Rosa Harrisonii* is

also a double yellow rose, said to have been raised from seed in America, and sent from thence to this country about four years since: this has proved one of the most beautiful of yellow roses; its flowers before expansion are globular, but a hot sun makes them expand and lose much of their beauty. It is a more robust grower than the Double Yellow Sweet Briar; its flowers are also a little larger, and do not fade so soon. The Single Yellow is the most brilliant yellow rose we yet possess; and it will probably be the parent of some double varieties, its equal in colour.

To this peculiar family of roses a few new varieties have been added. Cuivre Rouge, a curious hybrid, partaking of the Boursault Rose, with smooth thornless branches and dull reddish single flowers, and the Superb Double Yellow Briar, a seedling raised by Mr. Williams, of Pitmaston, from the same rose, and, I believe, at the same time, as the Double Yellow Briar. This has larger and more double flowers, but they are perhaps not so bright in colour, which might be owing to the excessive wet weather during its flowering season, as it bloomed here for the first time in the summer of 1839. A third variety is also in my possession, the Globe Yellow, a very pretty pale yellow rose, of humble growth: this variety was raised in Italy.

A new yellow rose has been given to us from that land of flowers, Persia. This was introduced

to the gardens of the Horticultural Society of London in 1838, and is now called the Persian Yellow Rose. In habit it is so exactly like the Single Yellow Austrian Briar as not to be distinguished from it: it seems to grow readily budded on the Dog Rose, as my plants this season have made shoots three feet or more in length: in colour it is of a deeper yellow than *Rosa Harrisonii*; its flowers are quite double, cupped, and not so liable to become reflexed as that very pretty and brilliant rose. Like the Yellow Austrian Briar, it loves a pure air and rich soil, and will probably bloom as freely. It bloomed beautifully in the garden of the Horticultural Society, even on a very small plant in a pot. Numerous seedlings have been raised from *Rosa Harrisonii*, but all that have come under my notice have proved inferior to their parent.

To bloom them in perfection Austrian Briars require a moist soil and dry pure air; but little manure is necessary, as they grow freely in any tolerably good and moist soil; neither do they require severe pruning, but merely the strong shoots shortened, and most of the twigs left on the plant, as they, generally, produce flowers in great abundance.

No family of roses offers such an interesting field for experiments in raising new varieties from seed as this. First, we have the Copper Austrian, from which, although it is one of the oldest roses

in our gardens, a double flowering variety has never yet been obtained. This rose is always defective in pollen, and consequently it will not bear seed unless its flowers are fertilised: as it will be interesting to retain the traits of the species, it should be planted with and fertilised by the Double Yellow; it will then in warm dry seasons produce seed not abundantly, but the amateur must rest satisfied if he can procure even one hep full of perfect seed. A French variety of this rose called "Capucine de Semis" seems to bear seed more freely, but as the colour of its flowers is not so bright as the original, its seed, even from fertilised flowers, would not be so valuable.

The beautiful and brilliant *Rosa Harrisonii*, however, gives the brightest hopes. This should also be planted with the Double Yellow Briar; it will then, as I had the pleasure of ascertaining even the last unfavourable summer, bear seed abundantly: no rose will perhaps show the effects of fertilising its flowers more plainly than this, and consequently to the amateur it is the pleasing triumph of art over nature. Every flower on my experimental plants, not fertilised, proved abortive, while, on the contrary, all those that were so, produced large black spherical heps full of perfect seed.

THE DOUBLE YELLOW ROSE.

(ROSA SULPHUREA.)

The origin of this very old and beautiful rose, like that of the Moss Rose, seems lost in obscurity. In the botanical catalogues it is made a species, said to be a native of the Levant*, and never to have been seen in a wild state bearing single flowers. It is passing strange, that this *double* rose should have been always considered a *species*. Nature has never yet given us a *double* flowering species to raise *single flowering varieties* from; but exactly the reverse. We are compelled, therefore, to consider the parent of this rose to be a species bearing single flowers. If this single flowering species was a native of the Levant, our botanists, ere now, would have discovered its habitats: I cannot help, therefore, suggesting, that to the *gardens* of the east of Europe we must look for the origin of this rose; and to the Single Yellow Austrian Briar (*Rosa lutea*), as its parent; though that, in a state of nature, seldom, if ever, bears seed, yet, as I have proved, it will if its flowers are fertilised. I do not suppose that the gardeners of the East knew of this, now common, operation; but it probably was done by some accidental juxtaposition, and thus, by mere chance, one of the most remarkable

* Introduced to our gardens in 1629.

and beautiful of roses was originated. From its foliage having acquired a glaucous pubescence, and its shoots a greenish-yellow tinge, in those respects much unlike the Austrian Briar, I have sometimes been inclined to impute its origin to that rose, fertilised with a double or semi-double variety of the Damask Rose, for that is also an eastern plant.

As yet, we have but two roses in this division; the Double Yellow, or "Yellow Provence," with large globular and very double bright yellow flowers, and the Pomponne Jaune, or dwarf Double Yellow, both excessively shy of producing full-blown flowers; though they grow in any moderately good soil with great luxuriance, and show an abundance of flower-buds; but some "worm i' the bud" generally causes them to fall off prematurely. To remedy this, various situations have been recommended: some have said, plant it against a south wall; others, give it a northern aspect, under the drip of some water-trough, as it requires a wet situation. All this is quackery and nonsense. The Yellow Provence Rose is a native of a warm climate, and therefore requires a warm situation, a free and airy exposure, and rich soil.

At Burleigh, the seat of the Marquis of Exeter, the effect of situation on this rose is forcibly shown. A very old plant is growing against the southern wall of the mansion, in a confined situ-

ation, its roots cramped by a stone pavement; it is weakly, and never shows a flower-bud. In the entrance court is another plant, growing in front of a low parapet wall, in a good loamy soil and free airy exposure; this is in a state of the greatest luxuriance, and blooms in fine perfection nearly every season.

Mr. Mackintosh, the gardener, who kindly pointed out these plants to me, thought the latter a distinct and superior variety, as it was brought from France by a French cook, a few years since; but it is certainly nothing but the genuine old Double Yellow Rose.

In unfavourable soils it will often flourish and bloom freely, if budded on the Musk Rose, the Common China Rose, or the Blush Boursault; but the following pretty method of culture, I beg to suggest, though I must confess I have not yet tried it:—Bud or graft it on some short stems of the Dog Rose; in the autumn, pot some of the strongest plants, and, late in spring, force them with a gentle heat, giving plenty of air. By this method the dry and warm climate of Florence and Genoa may, perhaps, be partially imitated; for there it blooms in such profusion, that large quantities of its magnificent flowers are daily sold in the markets during the rose season.

CLIMBING ROSES.

DIVISION FIRST. THE AYRSHIRE ROSE (*ROSA ARVENSIS HYBRIDA*).

It is the opinion of some cultivators, that the varieties of the Ayrshire Rose have been originated from the *Rosa arvensis*, or creeping single White Rose of our woods and hedges. But this is contradicted by botanists, who assert, that the original Ayrshire Rose was raised in Scotland from foreign rose seed: it may have been; but to judge from its habit, I feel no hesitation in asserting, that it is merely a seedling hybrid from our *Rosa arvensis*, having acquired much additional vigour, as all hybrid roses nearly invariably do, from some accidental impregnation: perhaps no rose can be more luxuriant than this; for the Single Ayrshire, and that semi-double variety, known as the Double White, will often make shoots in one season, twenty to thirty feet in length. Several of our prettiest varieties have been raised from seed by Mr. Martin, of Rose Angle, Dundee; but the first in the Catalogue, the Ayrshire Queen, the only dark Ayrshire Rose known, was originated by myself, in 1835, from the Blush Ayrshire, impregnated with the Tuscan Rose. But one seed germinated, and the plant produced has proved a complete hybrid. Its flowers are of the same shape, and not more

double than those of the Blush Ayrshire, its female parent; but they have all the dark purplish crimson of the Tuscany Rose. It has lost a portion of the vigorous climbing habit of the Ayrshire, but yet makes an excellent pillar rose. Till we can get a dark Ayrshire Rose, double as a *Ranunculus*, it will be acceptable. The Double Blush, or Double Red of some catalogues, is a pretty early rose, a vigorous climber, and as a standard forms a beautiful umbrella-shaped tree. Bennet's Seedling* is a new variety found growing among some briars, by a gardener, of the name of Bennet, in Nottinghamshire. It is said to be a very pretty double and fragrant rose. Dundee Rambler is the most double, and one of the best in this division; it blooms in very large clusters, much in the Noisette fashion, and is truly a desirable rose. Elegans, or the Double White, is one of our oldest varieties; its flowers are semi-double, and, individually, not pretty, as their petals in hot weather are very flaccid; but then it blooms in such large clusters, and grows so vigorously, that it forms an admirable Wilderness Rose. Jessica is a pretty, delicate pink variety, distinct and good. Rose Angle Blush is like Jessica in its colour, but is much more luxuriant in its habit. I am sure that this rose in strong soils will make shoots in one season more than twenty feet in length.

* *Rosa Thoresbyana* of the Floricultural Cabinet.

Lovely Rambler, or the Crimson Ayrshire, is too semi-double, and its petals too flaccid, to be much esteemed; it is mentioned here to prevent its two imposing names from misleading the amateur. Myrrh-scented: this name has been applied to two or three roses having the same peculiar scent; this variety has semi-double flowers of a creamy blush. Queen of the Belgians is a fine rose, with very double flowers, of a pure white; this is a most vigorous climber, soon forming a pillar fifteen or twenty feet high. Ruga is now a well-known variety, said to be a hybrid between the Tea-scented China Rose and the Common Ayrshire; it is a most beautiful and fragrant rose. Splendens is a new variety, with very large-cupped flowers, of a creamy blush; this rose has also that peculiar "Myrrh-scented" fragrance.

Ayrshire Roses are some of them, perhaps, surpassed in beauty by the varieties of *Rosa semper-virens*; still they have distinct and desirable qualities: they bloom nearly a fortnight earlier than the roses of that division; they will grow where no other rose will exist; and to climb up the stems of timber trees in plantations near frequented walks, and to form undergrowth, they are admirably well adapted: they also make graceful and beautiful standards, for the ends of the branches descend and shade the stems, which, in consequence, increase rapidly in bulk. It seems probable that Ayrshire Roses will grow to an enor-

mous size as standards, and surpass in the beauty of their singular dome-shaped heads many other roses more prized for their rarity.

The following extract from the Dundee Courier of July 11th, 1837, will give some idea how capable these roses are of making even a wilderness a scene of beauty:—

“Some years ago, a sand pit at Ellangowan was filled up with rubbish found in digging a well. Over this a piece of rock was formed for the growth of plants which prefer such situations, and amongst them were planted some half dozen plants of the Double Ayrshire Rose, raised in this neighbourhood about ten years ago. These roses now most completely cover the whole ground, a space of thirty feet by twenty. At present they are in full bloom, showing probably not less than ten thousand roses in this small space.”

CLIMBING ROSES.

DIVISION SECOND. *ROSA MULTIFLORA*.

The *Rosa multiflora*, or many-flowered rose, is a native of Japan, from whence it was brought by Thunberg, and introduced into this country in 1804. Several of the varieties in the catalogue have been raised in Italy, where these pretty roses flourish and bear seed abundantly. In the neighbourhood of Florence the Double Red may be seen

climbing to an enormous extent, and large plants, completely covered with thousands of its very double and perfect flowers, having a fine appearance. The Single White is also grown in Italy; from this I have this season (1837) raised several hundreds of seedlings; the seed I received from Signor Crivelli, of Como, an Italian Rose amateur, very much devoted to gardening; all the varieties of this family are interesting, as they differ so much from other roses. Alba, or the Double White, is rather a misnomer, for it is not pure white, but rather a pale flesh-colour, pretty and distinct. Crivellii is a new variety, and one of the prettiest; its flowers are of a brilliant and changeable red, very unique; it is a free grower, and well deserves attention. Elegans is a most beautiful little rose, changing from blush to nearly pure white: it is a little hybridised, and consequently more hardy than the true *Rosa multiflora*. Fragrans is a most robust growing variety, but it has not yet bloomed in this country. Scarlet Grevillia or Russelliana is a hybrid, differing much in character from the other varieties of this family; it is more hardy, but does not climb so freely; still it is a beautiful and distinct rose: its large clusters of shaded crimson flowers have a fine effect on a pillar. Grevillia, or the Seven Sisters' Rose, is a vigorous climber, blooming in large clusters, which show a curious diversity of colours; for, soon after expansion, the flowers change from

crimson to purplish rose, and then to pale rose; so that in the clusters may be seen three or four shades, from rose to deep purplish crimson. In wet soils, it is often killed to the ground by the winter's frost; even in warm situations, and if covered with mats, it shoots so early that when uncovered it cannot endure the cold of spring. It would probably form a fine pillar rose, if thatched in November with green furze or whin, which admits air and yet keeps off the severity of the frost. This covering may continue till March, and then must not be removed at once, but at twice or thrice; as want of caution in not removing their winter covering gradually is the death of thousands of half-hardy plants. If a plant is protected with spray or furze, remove half in mild weather in March, and let the remainder continue a week or fortnight longer, being regulated by the weather. The treatment of the *Grevillia* Rose as a pillar may be applied to all the varieties of *Rosa multiflora*, except *Russelliana*, as they are impatient of cold. *Hybrida*, or *Laure Davoust*, is a hybrid, and a most elegant and beautiful rose, having all the peculiar neatness of the double red and white varieties, with larger flowers and more beautiful foliage. This is one of the prettiest climbing roses known. A Genevese friend informs me that some pillars of this rose at Geneva are thirty feet high, and covered with flowers the greater part of summer. *Rubra* is

our oldest variety, but still interesting and pretty. Large plants of this rose may sometimes be seen, seldom putting forth flowers; this is owing to severe pruning, or to the winter killing the small spray-like shoots, from which they are generally produced. Superba is a variety approaching the Grevillia Rose in appearance, but much more dwarf and hardy.

These roses have but few adaptations. I have given under Grevillia Rose their culture as pillar roses: for these and for warm situations against walls, they are very ornamental: they also bloom in the greatest perfection as standards, but they will require removing to a warm shed in winter. Grafted on short stems and grown in large pots, they bloom freely, and form pretty objects, as they produce their myriads of elegant flowers the greater part of summer.

THE EVERGREEN ROSE.

(*ROSA SEMPERVIRENS.*)

The original of this beautiful family is the *Rosa sempervirens*, the climbing Wild Rose of Italy, with small single white flowers, and foliage nearly evergreen. Monsieur Jacques, the chief gardener at the Château de Neuilly, has had the pleasure of originating most of the varieties now in cultivation; two or three he has named after the

daughters of his royal master, King Louis Philippe: Adelaide d'Orleans is one of these, and a very pretty and excellent rose it is, with dark shining green foliage, and beautiful shaded pale rose-coloured flowers; in the Floricultural Cabinet for September, 1837, a figure of it is given, which is as like a sunflower as this pretty and distinct rose. Banksiæflora is more fragrant than the generality of these roses; it seems hybridised in a trifling degree with the old Musk Rose, which has probably imparted a little of its delightful perfume; this has small and very double white flowers. Brunonii is not a true Sempervirens, but approaching so near in its habit, that it cannot be placed in any other division with propriety. It has more colour than usual in roses of this family, as they are all inclined to pale flesh-colour, or white. This is of a vivid rose-colour, and very pretty and distinct. Carnea grandiflora: this name conveys an accurate description, as its flowers are large and flesh-coloured. Donna Maria is of the purest white, with fine dark green foliage, and very double flowers; a good and distinct rose. Eximia is a new variety, that has not yet bloomed here: it has been described as "rose edged with white." In habit, it is much like Indica major.* Felicite perpetue has been sold as "Noisette florabunda," "Noisette compacta," "Mademoiselle

* After waiting three years, this rose has bloomed, and proved nothing but Rosa Indica Major.

Euphrasie," "Abélard sempervirens:" and probably under some other high-sounding appellations, for it is a general favourite, and justly so, as it is one of the most beautiful of roses. No plant can be more lovely than a large specimen of this rose, covered with its double ranunculus-like cream-coloured flowers. It will not bloom if pruned much; therefore its shoots must be tied in their full length, and thinned out if too numerous, but not shortened.

Jaunâtre is a new variety, with yellowish-white flowers. This is evidently hybridised with the Musk or Noisette Rose, as it is fragrant.

Mélanie de Montjoie has large flowers of the purest white, and foliage very abundant and beautiful, of a shining dark green, contrasting finely with its flowers.

Myrianthes, sometimes called Ranunculacea, is a charming plant: its flowers are so perfectly and elegantly shaped, and their colour so delicate, that, if not the most beautiful of all, it is one among them. Plena is also known as Sempervirens major, and as the Double White Noisette. This is our oldest double variety, and a very good rose. Princesse Louise and Princesse Marie* I have found so much alike, that I have not entered the latter in the catalogue. Princesse Louise is a fine and vigorous-growing variety, with flowers

* I have recently received the true Princesse Marie, a very pretty rose-coloured rose.

very double and prettily cupped. Rampant, as its name implies, is a most vigorous and rampant grower, and a very pretty pure white rose. This will cover a wall or building with nearly as much rapidity as the common Ayrshire. Rose Fonçée has very dark shining green foliage, and varies in the colour of its flowers; for this season (1837) they have not, by any means, been either a bright or deep rose-colour, though in 1836 they were very distinct and in character. Scandens is a hybrid Sempervirens, having much of the Ayrshire habit, and making shoots of an immense length in one season. Its flowers are of a delicate buff when they first open, but they soon change to a pale flesh-colour. Alice Grey is the poetical name given to this rose by some nurserymen. Spectabile, or Rose Ayez of some catalogues, is a fine and distinct climbing rose, with bright rosy lilac flowers, and curiously incised petals; a most vigorous-growing and desirable variety. Triomphe de Bolwyller, or Sempervirens Odorata, is a hybrid between the Rosa Sempervirens and the Tea-scented China Rose, and decidedly the finest climbing rose known; its large globular flowers are very fragrant, and much like Noisette Lamarque, differing slightly in colour. This rose often blooms in the autumn, and that pleasing quality makes it still more desirable.

The varieties of Rosa Sempervirens are of the easiest culture, as they seem to flourish in all soils

and situations. In sheltered places and under trees they are nearly evergreen, retaining their leaves till spring. This makes them valuable for covering banks, trees, or walls. I know of no rose idea prettier than that of a wilderness of evergreen roses, the varieties planted promiscuously, and suffered to cover the surface of the ground with their entangled shoots. To effect this, the ground should be dug, manured, and thoroughly cleaned from perennial weeds, such as couch grass, &c., and the plants planted from three to five feet asunder. If the soil is rich, the latter distance will do; they must be hoed amongst, and kept clean from weeds after planting, till the branches meet; they will then soon form a beautiful mass of foliage and flowers, covering the soil too densely for weeds of minor growth to flourish. Those weeds that are more robust should be pulled out occasionally, and this is all the culture they will require; for temples, columns, and verandahs, their use is now becoming well known. One of the most complete temples of roses is that at the seat of — Warner, Esq., Hoddesdon, Hertfordshire; and the prettiest specimens of festooning these roses from one column to another, by means of small iron chains (strong iron wire will do), may be seen at Broxbourn Bury, near Hoddesdon, the seat of — Bosanquet, Esq. They also form elegant and graceful standards; like the Ayrshire roses their shoots are pendulous, and soon

hide the stem, in a few years forming a pretty dome of foliage and flowers; for covering the naked stems of forest or ornamental trees they are also very useful, as their roots will not injure the tree which supports them; and if strong copper wire is brought loosely round the trunk of the tree to support their branches, they will give scarcely any trouble in such situations. To make them grow vigorously, give them a supply of manure on the surface, annually in the autumn, to be carried to their roots by the rains of winter. In autumn or winter pruning, their branches must be left their full length, for, if shortened, they will make prodigious long shoots the following season, but produce no flowers; as they are very flexible, they can be laid in and twisted in any direction, but the use of the knife must be avoided as much as possible.

THE BOURSAULT ROSE.

(*ROSA ALPINA.*)

This is a most distinct group of roses, with long, reddish, flexible shoots; they are not such decided climbers as the preceding three divisions, but they are excellently well adapted for pillar roses: they owe their origin to the *Rosa Alpina*, a single red rose, a native of the Alps, and also of the hills in the south of France. M. Boursault, formerly a

great Parisian Rose amateur, gave his name to the group, by the first double variety, the Red, being named after him. Blush, or Boursault Florida, Calypso, White Boursault, Bengale Florida, Rose de Lisle, &c., for it is known by all these names, is a beautiful rose, and when trained up a pillar its large and delicately-coloured flowers have a fine effect; the Tea-scented Roses budded on this rose bloom in great perfection. Crimson, or Amadis, is also a very fine pillar rose; its clusters of large, deep purple and crimson flowers are inclined to be pendulous, consequently they have a fine effect when on a tall pillar. Drummond's Thornless is now an old variety, but it produces such a profusion of bright red flowers, that it ought to be in every collection of climbing roses. Elegans is a most beautiful vivid-coloured rose; its purple and crimson flowers are often striped with white: this has a long succession of bloom, as it is one of the earliest and latest of summer roses. Gracilis is a hybrid, of the most vigorous growth in good soils, often making shoots ten to twelve feet long in one season; unlike the other varieties of this division, its shoots are covered with thorns. Nothing can be more graceful than the luxuriant foliage of this plant; it has also finely-cupped flowers, of the most vivid rose-colour, and must be reckoned a beautiful and desirable rose. Inermis, or Boursault Pleine, is a pretty variety, with flowers of a bright red, and a fine and luxuriant grower.

The Red Boursault is our oldest variety, and, though only semi-double, it is distinct, pretty, and still a rose worth cultivating.

THE BANKSIAN ROSE.

(*ROSA BANKSIÆ.*)

Among the Banksian Roses, botanists class *Rosa lævigata*, or *sinica*, a rose with peculiarly glossy foliage, and large single white flowers. This is a native of Georgia, also of Tartary and China, and, very probably, is the plant from which the Chinese derived our Double Banksian Roses. *Rosa sinica* is also known as *Rosa lævigata* and *Rosa ternata*.

Our popular Double White Banksian Rose is almost universally known and admired. It was introduced in 1807; and very large plants are now to be seen in some situations: one in the garden of Miss Chauncey, at Cheshunt, covers a wall of immense extent. The flowers of the White Banksian Rose have a slight violet-like perfume, very agreeable. The Yellow Banksian Rose was brought to this country in 1827. This is an unique and beautiful variety, with scentless straw-coloured flowers, a little inclining to buff: they are like the flowers of the white, very small and double. Both these roses bloom early in May; and large plants, covered with their clusters of

flowers, have a pretty, but most un-rose-like appearance. The Rose-coloured Banksian Rose is a hybrid, with very bright rose-coloured flowers, the whole plant partaking as much of the character of the Boursault Rose as of the Banksian: in fact, it is a most complete mule; and though it has lost a little too much caste in the shape and size of its flowers—for they are a degree larger, and not quite so double as those of the Banksian Rose—it will prove a very pretty, bright-coloured climber, and quite hardy. The *Rosa Banksia Odoratissima*, lately introduced from France, and in some catalogues said to have rose-coloured flowers, in others rose-coloured margined with white, I am fearful is a rose with a “nom d’affaire.”

The true Banksian Roses are not adapted for pillar roses, as they are too tender: they require a wall, or very sheltered situation. Their very early flowering, also, renders this quite necessary, as the spring frosts, in cold exposures, destroy the bloom in the bud. They bloom more freely in dry than in wet, retentive soils, and they require pruning with care, for none of the small and twiggy branches should be shortened; but, if the plant has a superabundance, some of them may be removed. If their branches are shortened they will not bloom, but put forth a profusion of strong shoots. The flowers will be generally found in the greatest abundance on these small and twiggy branches, which at once points out the necessity

of their being left on the plant. Often, towards the end of summer, large old plants will produce immensely thick and strong shoots. These should be removed early in autumn, unless they are wanted to fill up a vacancy on the wall: the upper part of the plant, and its flowering twigs, will then not be exhausted in spring by them.

Banksian Roses seldom bear seed in this country; but in the south of France, and in Italy, they produce it in tolerable abundance; so that we may yet expect crimson and other coloured roses of this charming family.

HYBRID CLIMBING ROSES.

These are hardy and strong-growing roses, the origin of some of them not well ascertained. Among them, *Astrolabe* is a pretty, bright-coloured, and very double rose; not so vigorous in its growth as some others, but a distinct and good variety. *Clair* is a single hybrid rose, with small crimson flowers, said to be between *Rosa sempervirens* and the *Crimson China Rose*, or *Rosa semperflorens*. This is a singular and rather pretty rose, blooming all the autumn: it will, probably, be the parent of some beautiful climbers, as it bears seed freely. *Indica major* has perhaps a dozen names; for as "*Rosa Bengalensis*," "*Bengalensis Scandens*," and the "*Walton Rose*" of

Essex, it is well known; and last, but not least, as "*Rosa craculatum*,"—a name given to it by Mr. Wood of Maresfield. It is a fine robust variety, nearly evergreen, and makes shoots from ten to fifteen feet in length in one season. Its flowers are large, nearly double, and of a delicate pale rose-colour. This beautiful rose may be soon made to cover the most unsightly buildings or walls. Miller's Climber, from the nursery of Mr. Miller of Bristol, is a pretty bright pink rose, with small flowers, not quite double. Madame d'Arblay, or Wells' White, has been till now placed among *Rosa sempervirens*; but its habit is so different, and its origin so well ascertained, that I have removed it to this division.

This robust variety was raised from seed some years since by Mr. Wells of Redleaf, near Tonbridge Wells; and, I believe, given by him to the Messrs. Young of Epsom, from whom I received it, under the name of Madame d'Arblay. In strong soils it makes the most gigantic growth, soon forming a tree or a pillar of the largest size: its flowers are very double and pretty. The Garland, or Wood's Garland, is also a seedling, raised by Mr. Wells of Redleaf, I believe, from the seed of the Noisette Rose. Like Madame d'Arblay this is a vigorous grower, producing its flowers in immense clusters. These are fragrant, and change from white to pink after expansion.

Rosa elegans is a variety which has hitherto

been omitted in the catalogue. This is also known as Bengale Elégante: it is a rose of most distinct character, with cupped flowers, of the brightest pink, and nearly double. It makes long flexible shoots, and blooms in great profusion for a much longer period than any other summer rose.

To Hybrid Climbing Roses a very singular and pretty variety has been added. This I have raised from Italian seed. It produces abundance of flowers in large clusters, of a bright crimson scarlet, nearly double, and, what is very rare among climbing roses, they are very fragrant. I have named this rose "Sir John Sebright," as I have the honour of knowing that Sir John is a great admirer of brilliant coloured climbing roses.

A new family of climbing roses has been lately introduced from North America; we owe this group to *Rosa rubifolia*, the Bramble-leaved Rose. A Mr. Feast, nurseryman at Baltimore, has been the originator of a few varieties, one of which is described as being an autumnal bloomer. The Queen of the Prairies is said to be one of the best of these roses, producing its flowers in large clusters, of a bright rose-colour; its foliage is large, and habit very robust. The plants have grown very freely here this summer, but none of them have yet produced flowers.

Among climbing roses but few can be found that will bear seed in this country, the Ayrshire Roses excepted, from some of which it is probable

that some fine and original climbers may be raised. A most desirable object to obtain is a dark crimson *Rosa ruga*; this may possibly be accomplished by planting that favourite rose with the Ayrshire Queen, and fertilising its flowers very carefully with those of that dark rose. It is remarkable that although these roses are both hybrids, from species apparently very remote in their affinities, yet both of them bear seed, even without being fertilised. The Blush Ayrshire, a most abundant seed-bearer, may be planted with the Ayrshire Queen, the Common Bourbon, Gloire de Rosomène, the Double Yellow Briar, Single Crimson Moss, Celine, Henri Barbet, the China Rose, Fabvier, Tea Princesse Hellène (Luxembourg), and its flowers fertilised with the pollen of these roses; if any combination can be effected, pleasing results may reasonably be hoped for. To “make assurance doubly sure,” the anthers of the Ayrshire Rose should be removed from some of the flowers with which the experiment is tried.

The Red Boursault Rose, planted with Athelin, may perhaps be made the parent of some brilliant red climbing roses.

Rose Clair, if planted against a south wall, with Gloire de Rosomène, or fertilised with the flowers of Athelin, Sir John Sebright, or the Ayrshire Queen, would give some distinct and curious varieties.

Sempervirens Scandens, of which the flowers

are buff when they first open, would be worth experimenting upon with the Double Yellow Briar; as this is a most vigorous climber, its progeny, however much of hybrids, would be sure to retain enough of that desirable quality.

TREATMENT OF THE SEED, SOWING, &c.

The hips of all the varieties of roses will in general be fully ripe by the beginning of November; they should then be gathered and kept entire, in a flower-pot filled with dry sand, carefully guarded from mice; in February, or by the first week in March, they must be broken to pieces with the fingers, and sown in flower-pots, such as are generally used for sowing seeds in, called "seed-pans," but for rose seeds they should not be too shallow; nine inches in depth will be enough; these should be nearly, but not quite, filled with a rich compost of rotten manure and sandy loam or peat; the seeds may be covered, to the depth of about half an inch, with the same compost; a piece of kiln wire must then be placed over the pot, fitting closely at the rim, so as to prevent the ingress of mice, which are passionately fond of rose seeds; there must be space enough between the wire and the mould for the young plants to come up, half an inch will probably be found enough; the pots of seed must never be

placed under glass, but kept constantly in the open air, in a full sunny exposure, as the wire will shade the mould, and prevent its drying. Water should be given occasionally in dry weather; the young plants will perhaps make their appearance in April or May, but very often the seed does not vegetate till the second spring. When they have made their "rough leaves," that is, when they have three or four leaves, exclusive of their seed leaves, they must be carefully raised with the point of a narrow pruning knife, potted into small pots, and placed in the shade: if the weather is very hot and dry, they may be covered with a handglass for a few days. They may remain in those pots a month, and then be planted out into a rich border; by the end of August those that are robust growers will have made shoots long enough for budding. Those that have done so may be cut down, and one or two strong stocks budded with each; these will the following summer make vigorous shoots, and the summer following, if left unpruned, to a certainty they will produce flowers. This is the only method to ensure seedling roses flowering the third year; many will do so that are not worked, but very often the superior varieties are shy bloomers on their own roots, till age and careful culture give them strength.

It may be mentioned here, as treatment applicable to all seed-bearing roses, that when it is

desirable the qualities of a favourite rose should preponderate, the petals of the flower to be fertilised must be opened gently with the fingers *; a flower that will expand in the morning should be opened the afternoon or evening previous, and the anthers all removed with a pair of pointed scissors; the following morning when this flower

* It requires some watchfulness to do this at the proper time; if too soon, the petals will be injured in forcing them open; and in hot weather in July, if delayed only an hour or two, the anthers will be found to have shed their pollen. To ascertain precisely when the pollen is in a fit state for transmission, a few of the anthers should be gently pressed with the finger and thumb; if the yellow dust adheres to them the operation may be performed; it requires close examination and some practice to know when the flower to be operated upon is in a fit state to receive the pollen; as a general rule, the flowers ought to be in the same state of expansion, or, in other words, about the same age. It is only in cases where it is wished for the qualities of a particular rose to predominate, that the removal of the anthers of the rose to be fertilised is necessary; thus, if a yellow climbing rose is desired by the union of the Yellow Briar with the Ayrshire, *every anther* should be removed from the latter, so that it is fertilised solely with the pollen of the former. In some cases, where it is desirable to have the qualities of both parents in an equal degree, the removal of the anthers must not take place; thus, I have found by removing them from the Luxembourg Moss, and fertilising that rose with a dark variety of *Rosa Gallica*, that the features of the Moss Rose are totally lost in its offspring, and they become nearly pure varieties of the former; but if the anthers of the Moss Rose are left untouched, and it is fertilised with *Rosa Gallica*, interesting hybrids are the result, more or less mossy; this seems to make superfetation very probable; yet Dr. Lindley in "Theory of Horticulture," page 332, "thinks it is not very likely to occur."

is fully expanded it must be fertilised with a flower of some variety, of which it is desired to have seedlings partaking largely of its qualities. To exemplify this, we will suppose that a climbing Moss Rose with red or crimson flowers is wished for: the flowers of the Blush Ayrshire, which bears seed abundantly, may be selected, and before expansion the anthers removed; the following morning, or as soon after the operation as these flowers open, they should be fertilised with those of the Luxembourg Moss; if the operation succeed, seed will be procured, from which the probability is, that a climbing rose will be produced with the habit and flowers of the Moss Rose, or at least an approximation to them; and as these hybrids often bear seed freely, by repeating the process with them, the at present apparent remote chance of getting a climbing Moss Rose may be brought very near.

I mention the union of the Moss and Ayrshire Rose by way of illustration, and merely to point out to the amateur how extensive and how interesting a field of operations is open in this way. I ought to give a fact that has occurred in my own experience, which will tell better with the sceptical than a thousand anticipations. About four years since, in a pan of seedling Moss Roses, was one with a most peculiar habit, even when very young; this has since proved a hybrid rose, partaking much more of the Scotch Rose than of

any other, and till the plant arrived at full growth I thought it a Scotch Rose, the seed of which had by accident been mixed with that of the Moss Rose, although I had taken extreme care: to my surprise it has since proved a perfect hybrid, having the sepals and the fruit of the Provence Rose, with the spiny and dwarf habit of the Scotch Rose; it bears abundance of hips, which are all abortive.* The difference in the fruit of the Moss and Provence Rose, and those of the Scotch is very remarkable, and this it was which drew my particular attention to the plant in question; it was raised from the same seed, and in the same seed-pan, as the Single Crimson Moss Rose; as this strange hybrid came from a Moss Rose accidentally fertilised, we may expect that art will do much more for us.

The following extract from the Botanical Register for January, 1840, will, I think, go to prove that these expectations are not without foundation:—

“My principal reason for publishing a figure of this very remarkable plant, *Fuchsia Standishii*, is because it is a mule between *Fuchsia fulgens* and *Fuchsia globosa*, two plants as dissimilar as possible in the same genus. The former, indeed,

* It is more than probable, that if the flowers of this rose were fertilised with those of the single Moss Rose, they would produce seed from which some curious hybrid moss roses might be expected.

figured in this work for the year 1838, tab. 1., differs in so many respects from the common species of the genus, especially in having an herbaceous stem and tuberous roots, that it has been supposed impossible that it should be a *Fuchsia* at all. It now, however, appears, from the fact of its crossing freely with the common *Fuchsias*, that it produces hybrids, and really does belong to the genus. These hybrids are completely intermediate between the two parents; in this case having the leaves, flowers, and habit of their mother, *Fuchsia globosa*, with the hairiness and tenderness of foliage of their father, some of his colouring, and much of his herbaceous character. It is by no means necessary to take *Fuchsia globosa* for the female parent, as *Fuchsia fulgens* is found to intermix readily with many other species. That which is now figured is the handsomest I have seen. It was raised by Mr. John Standish, nurseryman, Bagshot, who sent me specimens last July, together with flowers of several others of inferior appearance. He tells me that it is an exceedingly free bloomer, with a stiff erect habit; and I can state, from my personal knowledge, that the plant is very handsome."

Now this is from Dr. Lindley, who may be quoted as a weighty authority; and this plant is a hybrid between two, one of which, I believe, it was seriously contemplated to place out of the genus

Fuchsia, so dissimilar did it appear to any known species of that genus. After this, we may hope for a Mossy Bourbon Rose, and a Yellow Ayrshire.

PROPAGATION OF SUMMER ROSES.

There are four modes of propagation applicable to Summer Roses, viz. by layers, by cuttings, by budding, and by grafting. Layering may be performed in spring, summer, and autumn; the two latter seasons only can be recommended, but if any are forgotten or omitted by accident, the operation in spring will often give success; still, as summer layering is the most legitimate, I shall give directions for that my first notice.

About the middle of July in most seasons the shoots will be found about eighteen inches or two feet in length; from these, two thirds of their length the leaves should be cut off, close to the shoot, beginning at the base, with a very sharp knife; the shoot must then be brought to the ground, so as to be able to judge in what place the hole must be made to receive it; this may be made large enough to hold a quarter of a peck of compost: in heavy and retentive soils this should be rotten dung and pit sand in equal quantities, well mixed; the shoot must then be "tongued," *i. e.* the knife introduced just below a bud and brought upwards, so as to cut about half way through; this must be done at

the side or back of the shoot (not by any means at the front or in the bend), so that the tongue does not close; to make this certain a small piece of glass or thin earthenware may be introduced to keep it open. Much nicety is required to have the tongue at the upper part of the shoot, so as not to be in the part which forms the bow, as it is of consequence that it should be within two inches of the surface, so as to feel the effects of the atmospheric heat; unless this is attended to the roots will not be emitted quickly; the tongued part must be placed in the centre of the compost, and a moderate-sized stone put on the surface of the ground to keep the layer in its place. The first week in November the layers may be taken from the parent plant, and either potted as required, or planted out where they are to remain. Those shoots not long enough in July and August may be layered in October, when the layers are taken from the shoots, and, if any are forgotten, February and March will be the most favourable months for the operation: as a general rule, July is the most proper season.

PROPAGATION BY CUTTINGS.

To procure early cuttings, so as to have plants ready for planting out in June, strong plants must be placed in the forcing-house in December; these will make vigorous shoots, which, when

thoroughly ripe in March, should be made into cuttings about six inches in length; the leaves must be left on that part of the cutting above the surface. Supposing the cutting to contain six buds, from three of these the leaves may be removed, or, if they are very large, even four, leaving two buds with the leaves attached. The cuttings may be planted singly in small pots filled one third with small pieces of broken pots (on these must the end of the cutting rest), and the remainder with light mould, or peat and sand equal quantities; the cuttings must then be placed in a gentle hot-bed and kept perfectly close, no air should be admitted, by raising the lights in the slightest degree, except for the operation of watering; they must be sprinkled with tepid water every morning and again in the afternoon, but the latter only in bright sunny weather: these operations should be performed as quickly as possible, to prevent their being exposed to the exhausting effects of the open air. They will have made roots in a fortnight or three weeks. When this is ascertained, which can be done by gently turning out the plant, they should be placed in a cold frame and still kept close. After being a week in this situation they may be potted into larger pots. This is a very interesting method of propagation, and the plants made in this manner form very pretty bushes of compact growth; it is applicable to all roses; even Moss

Roses will strike root if treated as above; they require more patience, as they are longer in forming their roots than many, as are also the Provence. Care must be taken that the shoots, before being formed into cuttings, are perfectly ripe: an invariable sign of their maturity is when the terminal bud is formed at the end of the shoot; this shows that they have made their first growth; to hasten this, the plants should be placed in the most sunny situation, so as to mature their shoots as early as possible.

Cuttings of Hybrid China Roses, Hybrid Bourbons, and of all the climbing roses, may be raised with facility by planting them in a shady border in September. They may be made about ten inches in length, two thirds of which should be planted in the soil: in fact, they can scarcely be planted too deep: one, or at most two, buds above the surface will be enough; on these buds the leaves must be left untouched. These will be fit for planting out the following autumn.

PROPAGATION BY BUDDING.

This seems at present, owing to the strong wish manifested by the present generation to do every thing quickly, to be the favourite mode of propagation. A summer rose from a cutting requires at least two seasons to form a blooming plant. A layer is occasionally very capricious, and very loth

to make roots; indeed, of some varieties, particularly of *Rosa alba*, they will not by any means be induced to form roots when layered, and are very difficult even to be propagated by cuttings from the forcing-house; but these become perfectly docile and manageable when budded, in one season only forming large and handsome plants. The operation of budding is difficult to describe. A longitudinal cut, not so deep as to cut into the wood, but merely through the bark, should be made in the clear part of the shoot; thus , making the diagonal cut at the top of the incision. I differ from most of those who have given directions for budding, as they make the incision thus, : my practice has arisen from the frequent inconvenience sustained by shoots from standard stocks being broken off by the wind, when the cut is made at right angles: with the diagonal incision an accident rarely happens: the bark on both sides this incision must be opened with the flat handle peculiar to the budding knife, and the bud inserted: the slice of bark taken off the shoot with the bud in the centre should not be more than an inch in length; but half an inch is enough, the incision being made of the same length: this is the length used by experienced budders, who pride themselves upon performing the operation in the neatest manner possible. When the bud is inserted, cut off with your knife (which should be very sharp) a piece from the upper part of the

plate, *i. e.* the piece of bark with the bud attached, so that it fits closely to the diagonal cut at top; then bind it up firmly with cotton twist, such as the tallow-chandlers use for the wicks of candles; the finest quality is best: this is the most eligible binding known, and far preferable to matting or worsted. Many writers recommend the wood to be left in the plate: in cases where the bud is unripe this may be very well; but, as a general rule, always remove it. Take buds that are mature, and, by placing the thumb nail at the top of the plate, peel cleanly the wood from the bark: if a remnant of wood is left on or near the eye of the bud, let it remain; it will do no harm; but if attempted to be removed, the eye is liable to be bruised and injured. Budding may be commenced in June, and performed as late as the second week in September; if done in June, the only shoots fit to take buds from are those that have shed their bloom: on these alone the buds are mature. I have occasionally known them to succeed in October. After August it is at the best uncertain, as the success of the operation entirely depends upon the state of the weather. In taking the wood from the bark, it will seem occasionally as if the eye or root of the bud is dragged out; it will then appear hollow: this only appears so, and is not of the least consequence, at least with roses, as those apparently hollow buds take as readily as those with the eye prominent.

PROPAGATION BY GRAFTING.

This may be performed in the forcing-house in January, and in the open air in February and March. There are many modes of grafting: those most eligible for roses are the common "whip grafting," using clay as a covering, and "cleft grafting," using wax or pitch: the former is generally the most successful; and if the stocks are potted a year before being used, strong blooming plants of the perpetual roses may be made in three months.

A neighbouring amateur has been very fortunate in grafting roses, merely gathering his stocks from the hedges in January and February, and immediately grafting and potting them after the operation; in doing so covering the union of the graft firmly with mould, using no clay, so as to leave only three or four buds above the surface, and placing them in a gentle hot-bed, in a common garden frame, keeping them very close. In this simple method of operating I have seen eighteen out of twenty grafts grow, but, owing to the stocks not being established in pots a year as they ought to have been, these plants have not made strong and luxuriant shoots the first season. Stocks may be potted in October if none can be had established in pots; these may be used in January or February with much success.

In whip grafting of roses in pots it will be as well to omit the usual tongue by which in open air the graft is, as it were, hung on the stock; this tonguing weakens rose-grafts too much; as their shoots are generally pithy, a slice of bark with a *very small* portion of wood about $1\frac{1}{2}$ inch in length, taken from one side of the stock where the bark is clear and free from knots, is all that is required; then take part of a shoot about seven inches in length, and pare its lower end down quite thin till it fits accurately on the place in length and breadth, from whence the slice of bark and wood from the stock was taken; bind it firmly with strong bass, which has been soaked in water, and then place clay over it, so as to leave no crack for the admission of air: presuming this graft to be in a pot, it may be plunged in sawdust or old tan, leaving two buds of the graft above the surface in a gentle hot bed, and kept close till it has put forth its shoots: when these are three inches in length, air may be admitted gradually by propping up the light: if perpetual roses, they may shortly be removed to the greenhouse, where they will bloom in great perfection in early spring. After this first bloom their shoots should be shortened, and if required they may be planted in the open borders, where they will flower again and again during the summer: if summer roses they will flower but once, but they will make strong shoots and establish themselves for another season; if a forcing-

house is used instead of a hot-bed frame they must be plunged in the same materials, as this keeps the clay moist, and generally ensures success; if convenient, grafting wax, made as follows, may be used in lieu of clay: 1 lb. Burgundy pitch, $\frac{1}{4}$ lb. common pitch, 2 oz. bees' wax, and $\frac{1}{2}$ oz. mutton fat, melted, and put on with a brush while warm: in cleft grafting, for a description of which I must refer to Loudon's Encyclopædia of Gardening, article "grafting." Grafting pitch must alone be used if the grafts are small; this is a very nice mode, but difficult to describe, and the same result may be obtained by rind-grafting*, a very neat method: before this operation the stocks must be placed in the forcing-house for a few days till the bark will run, i. e. part readily from the wood; the top of the stock must then be cut off cleanly, and without the least slope; an incision, as in budding, must then be made through the bark from the crown of the stock downwards, about one inch in length, which can be opened with the haft of a budding-knife; directly opposite to this incision a bud should be left if one can be found on the stem of the stock, the graft must then be cut flat on one side, as for whip-grafting, and inserted between the bark and wood, bound with bass, and covered with grafting wax. In March

* The best stocks for this kind of grafting are the Blush Bour-sault and Rosa Manettii; the latter I received a few years since from Italy.

this may be done with young shoots of the current season from the forcing-house; they must be mature; as a rule, take only bloom shoots that have just shed their flowers—these are always ripe. To those who love roses, I know no gardening operation of more interest than that of grafting roses in pots in winter; blooming plants of the perpetual roses are made so quickly, and they are so constantly under observation; but for this a small forcing-house is of course necessary: a house twelve feet by eight feet, with an eighteen-inch Arnott's stove, will do all that is necessary; and the expense of a structure of these dimensions is very moderate. What can be done in the way of propagation in so small a house with method is quite astonishing; a hot-bed frame will give the same results, but the plants cannot be viewed in bad weather with equal facility; that interest attached to watching closely every shoot as it pushes forth to bud and bloom in all its gay attire is lost. To the mind happily constituted this is a calm and untiring pleasure; the bud breaking through its brown wintry covering into verdant leaves, replete with the delicate tints so peculiar to early spring, and unchecked by cold and withering blasts, makes us feel vernal pleasures, even in January; and then the peeping flower-buds perhaps of some rare and as yet unseen variety, add to these still calm pleasures, felt only by those who really love plants and flowers, and all the lovely creations of nature.

PLANTING.

November and December are so well known to be favourable months for planting the Summer blooming Roses, that it is thought by many amateurs no others are or can be so eligible: applied to dry sandy soils this idea is quite correct; but on wet retentive soils February is much better, as the holes can be opened in winter so that the mould is pulverised by frost. In light soils a mixture of well-rotted manure, and rich stiff loam from an old pasture, giving to each plant, if a standard, a wheelbarrow-full, if a dwarf, about half that quantity, will be found the best compost: if the soil is stiff, half a wheelbarrow-full of manure mixed with the natural soil will be quite sufficient.

THE
AUTUMNAL ROSE GARDEN.

To Autumnal Roses we are much indebted for that prolonged season of interest which this "Queen of Flowers" now gives. The roses of June, however splendid, soon fade; but some Perpetual, or Noisette, or Bourbon roses enrich our gardens with their perfume and gay colours, till the chills of approaching winter prevent the expansion of their flowers. Among the most fragrant of these autumnal beauties are

PERPETUAL ROSES.

This division has as much variety in its origin as in its appearance: it would, indeed, be a difficult task to trace the parentage of some of the justly esteemed varieties of this family. Our old red and white monthly roses have, no doubt, contributed their share of sweet assistance; for, in many of them, the powerful fragrance of these two very old damask roses is apparent, and no perfume can be more pleasing.

In preference to giving a slight history of the family at the commencement, I shall, as I describe them, at the risk of being tedious, give the supposed origin of most of the varieties; premising, that all those termed *true perpetuals* have, generally, a terminal cluster of buds at the end of each shoot, whether produced in spring, summer, or autumn.

Antinous is a new rose, evidently between the French Rose and Crimson Perpetual, equalling that fine rose in form and fragrance, and surpassing it in beauty of colouring; but it partakes rather more than it ought to do of the French Rose, as it is not a True Perpetual. However, it often puts forth its fine crimson-purple flowers in September; it will therefore be much esteemed, as we have hitherto been accustomed to roses of more sober hues in that pleasant month. Billiard, so named from a French rose amateur, is a pretty bright rose, very fragrant and double, and a True Perpetual. Belle Italienne approaches very near to the Crimson Perpetual, except that its flowers are larger, and not quite so double: this is also a True Perpetual. Bernard, or Pompon Perpetual, is a most beautiful new rose, with rather small flowers; but these are very double and finely shaped, of a delicate carmine colour: this is a True Perpetual, and a most desirable rose.

The Crimson Perpetual, Rose du Roi, or Lec's

Crimson Perpetual, deserves a few extra words of comment. This fine rose was raised from seed, in 1812, in the gardens of the palace of Saint Cloud, then under the direction of Le Comte Lelieur, and named by him *Rose du Roi*; owing, I suppose, to Louis the Eighteenth soon after that time being restored, and presenting an opportunity for the Comte to show his loyalty: it is not recorded that he changed its name during the hundred days to *Rose de l'Empereur*! It is asserted that it was raised from the *Rosa Portlandica*, a semi-double bright-coloured rose, much like the rose known in this country as the *Scarlet Four-Seasons*, or *Rosa Pæstana*; which Eustace tells us, in his *Classical Tour*, grows among the ruins of *Pæstum*, enlivening them with its brilliant autumnal flowers. This is treated as a traveller's tale by one or two of our English botanists, and the *Rosa Pæstana* is said to have been originated from seed in England: but was that seed from Italy?

Every gentleman's garden ought to have a large bed of *Crimson Perpetual* Roses, to furnish bouquets during August, September, and October; their fragrance is so delightful, their colour so rich, and their form so perfect.

Crispata, or the *Curled Perpetual*, is one of those whimsies of nature, more curious than pretty. Each leaf is curled, and forms a ring, giving an odd appearance to the plant. *De Neuilly* is a hybrid *Bourbon* of great excellence, having all the

peculiar beauty of the Bourbon Roses, with the fragrance of the Damask Rose. It is a most abundant autumnal bloomer, and ought to be extensively cultivated. De Rennes is a True Perpetual, of first-rate excellence, with large and very double flowers. Délice d'Hiver is a splendid rose, with large and finely-shaped flowers, of that vivid rose-colour so much admired; also a True Perpetual. Désespoir des Amateurs, or Perpetuatis-sima, had its origin in Italy, from whence it was ushered into France, with its high-sounding names, equally ridiculous; for, in reality, the rose, though pretty and fragrant, is much below many in this division. It is a hybrid of uncertain origin, and totally unlike any other rose in habit, which is dwarf and rather delicate.

Flon, Gloire des Perpetuelles, and La Mienne, are roses of the same race or breed, and have the same leading features, differing only, and that but little, in the size of their flowers.* They are all True Perpetuals, and abundant bloomers, with a peculiar and pretty habit; for their foliage has a soft appearance, and, when the plants are covered with their brilliant red flowers, no Perpetual Roses are more beautiful. Ferox is quite unique, and very magnificent, having larger flowers than any other in this division; but it is

* This difference is now found to be imaginary, and owing to local circumstances.

not a certain autumnal bloomer. The White Four-Seasons has an attractive name, but it does not deserve it, as it has not the habit of the True Four-Seasons Rose, producing constantly terminal flower-buds, but more like the Common White Damask, from which it is but little removed. The Grand Perpetual, or Fabert's, is a True Perpetual Rose of great excellence, requiring a rich soil and good culture to bloom in perfection. It has one great fault, — the flowers produced in July are so large that they almost invariably burst, but its autumnal flowers are much more symmetrical. Grande et Belle, or Monstreuse, is a rose of immense size and beauty, and generally a good and True Perpetual. Henriette Boulogne is a good rose, but rather an inconstant autumnal bloomer. This, with some others, the French distinguish as roses that “remontante-rarement,” in contradistinction to the True Perpetuals, which, they say, “remontante franchement.” Jean Hachette is a most immense rose, and very double, but not a True Perpetual. Jenny Audio is a rare rose, not remarkable for any peculiar beauty, but fragrant, and a True Perpetual. Josephine Antoinette is now an old variety, but a True Perpetual of great excellence. Louis Philippe, being introduced before Antinous, has had a large share of admiration: its immense size, under proper cultivation, and its dark purple colour, make it even yet desirable; it

is also a True Perpetual. Lodoiska and Madame Feburier are superb roses, and very large and double; but they are rather Inconstant Perpetuals. Marie Denise is a fine robust variety: its flowers resemble those of Lodoiska, but more double, and the plant approaches nearer to a True Perpetual than that fine rose. Pompon Four Seasons is a very old rose, as its name may be found in many old catalogues; still it is rare, it blooms well in autumn, and forms a pretty little bush.

Pulchérie is a pretty dark purple rose, very distinct, and a True Perpetual. Perpétuelle d'Angers is an old variety, a very free autumnal bloomer, and remarkably fragrant; but its flowers are not so finely shaped as those of some other varieties. Palmire, or the Blush Perpetual, is of about the same standing as the Crimson: it is a True Perpetual, and a good rose. Panaché de Girardon, or the Striped Perpetual, is a pretty variegated rose. In some seasons its flowers are much more striped than in others; but it is not a True Perpetual. Palotte Picotée, a name without meaning, as it is not spotted, is much like the Queen of Perpetuals; in fact, it cannot be distinguished from that rose; and, like that, its flowers seldom or never open. Portlandica carnea is an exceedingly pretty bright rose, something like Rosa Pæstana in habit, with flowers of a paler colour, and a True Perpetual. Portlandica alba, or Portland Blanc, is a new white rose of great beauty; it however rarely opens

in our moist climate ; a True Perpetual Rose like it would be invaluable. In rich soils it will, perhaps, give a second series of flowers ; but it cannot be depended upon as a constant autumnal bloomer. Prud'homme is a new and beautiful rose, bright-coloured, fragrant, and a True Perpetual. The Royal Perpetual is a seedling from the Four-Seasons Rose ; its flowers are very double and perfect, of a fine vivid rose-colour, and the plant a True Perpetual. Sisley's Perpetual, like De Neuilly, is hybridised with the Bourbon Rose ; and, like that fine variety, it has lost but little of the fragrance of the Damask : this is a large and beautiful autumnal rose. The Stanwell Perpetual, I believe, was raised from seed in Mr. Lee's nursery at Stanwell. It is in habit something like the Scotch Perpetual, but it blooms with more constancy, and with greater freedom. In the autumn its flowers are also larger ; in short, it is a much better rose of the same family, and one of the prettiest and sweetest of autumnal roses. The Sixth of June, so named by the French in commemoration of one of their numerous political changes and "glorious days," is a miniature variety of La Mienne, and a pretty vivid-coloured rose.

Volumineuse is a magnificent rose, very large and finely shaped : but, though it often blooms finely in autumn, it must not be depended upon as a True Perpetual : this, with Madame Feburier, is now classed with the Damask roses.

To Perpetual Roses some valuable additions have been made, chiefly of Hybrid Bourbons, which partaking of the fragrance and hardiness of the Damask rose, are very desirable, as well as from their blooming so abundantly in the autumn. These roses are termed "Hybrid Perpetuals" in some catalogues. Clémentine Duval is a very pretty pale rose-coloured variety of this class, of compact growth, and giving abundance of flowers. General Merlin, of the same origin, also raised by Monsieur Duval, is quite a new variety, with rose-coloured flowers, rather bright, and elegantly shaped. Queen Victoria is of a very deep reddish rose, tinged with purple: this is a fine and robust rose. Fulgorie, like the above, is also a hybrid Bourbon, with flowers of a deep purplish crimson, very double and perfect, blooming freely all the autumn, and growing most luxuriantly. This is certainly one of the best roses of its class and colour. Marshal Soult is a robust and free-growing rose, but rather dull in colour when compared with Fulgorie. Princesse Hélène is also a robust and free-growing deep rose-coloured rose: in moist weather, and sometimes in autumn, its flowers do not open freely. Coquette de Montmorency, a bright red rose, is one of the most delightful varieties yet introduced: its growth is so compact, and its flowers are produced in such abundance, always opening freely, and always elegantly shaped, that it cannot be too much recommended.

Madame Laffay is perhaps a rose of equal merit, and if it had made its appearance before La Coquette, Monsieur Laffay would have reaped more advantage from it; its habit is robust, and its flowers a little larger than those of the latter: this was raised from General Allard, a hybrid Bourbon rose, blooming generally but once in the season. Monsieur Laffay, by persevering through two or three generations of seedlings, has at last obtained his object in getting a Perpetual Rose of the same brilliant colour. This information will, I trust, be an incentive to amateurs in this country. Roses of distant affinities cannot be brought together *at once*: thus a Yellow Ayrshire Rose must not be expected from the first trial, but probably a climbing rose, tinged with yellow or buff, may be the fruit of the first essay. This rose must again be operated upon, and a second generation will, perhaps, be nearer the end wished for: again the amateur must bring perseverance and skill into action; and then if, in the third generation, a bright yellow climbing rose is obtained, its possession will amply repay the labour bestowed; but these light gardening operations are not labour, they are a delightful amusement to a refined mind, and lead it to reflect on the wonderful infinities of nature. I ought, perhaps, to mention, among new Perpetual Roses, a "Striped Crimson Perpetual," or Rose du Roi panachée which has been introduced from the

South of France. The attractive descriptions of this new rose are qualified with the word "inconstant."

As the culture of this class of roses is at present but imperfectly understood, I shall give the result of my experience as to their cultivation, with suggestions to be acted upon according to circumstances. One peculiar feature they nearly all possess — a reluctance to root when layered; consequently, Perpetual Roses, on their own roots, will always be scarce: when it is possible to procure them, they will be found to flourish much better on dry poor soils than when grafted, as at present. Perpetual Roses require a superabundant quantity of food: it is therefore perfectly ridiculous to plant them on dry lawns, to suffer the grass to grow close up to their stems, and not to give them a particle of manure for years. Under these circumstances, the best varieties, even the Rose du Roi, will scarcely ever give a second series of flowers. To remedy the inimical nature of dry soils to this class of roses, an annual application of manure on the surface of the soil is quite necessary. The ground must not be dug, but lightly pricked over with a fork in November; after which, some manure must be laid on, about two or three inches in depth, which ought not to be disturbed, except to clean with the hoe and rake, till the following autumn. This, in some situations, in the spring months,

will be unsightly: in such cases, cover with some nice green moss, as directed in the culture of Hybrid China Roses. I have said that this treatment is applicable to dry poor soils; but even in good rose soils it is almost necessary; for it will give such increased vigour, and such a prolongation of the flowering season, as amply to repay the labour bestowed. If the soil is prepared, as directed, they will twice in the year require pruning: in November, when the beds are dressed, and again in the beginning of June. In the November pruning, cut off from every shoot of the preceding summer's growth about two thirds; if they are crowded, remove some of them entirely. If this autumnal pruning is attended to, there will be, early in June, the following summer, a vast number of luxuriant shoots, each crowned with a cluster of buds. Now, as June roses are always abundant, a little sacrifice must be made to ensure a fine autumnal bloom; therefore, leave only half the number of shoots to bring forth their summer flowers, the remainder shorten to about half their length. Each shortened branch will soon put forth buds; and in August and September the plants will again be covered with flowers. In cultivating Perpetual Roses, the faded flowers ought immediately to be removed; for in autumn the petals do not fall off readily but lose their colour and remain on the plant, to the injury of the forthcoming buds. Though I have recommended

Perpetual Roses to be grown on their own roots, in dry soils, yet, on account of the autumnal rains dashing the dirt upon their flowers when close to the ground, wherever it is possible to make grafted roses grow, they ought to be preferred; for, on stems from one and a half to two feet in height, the flowers will not be soiled; they are also brought near to the eye, and the plant forms a neat and pretty object.

The Crimson, and, indeed, nearly all the Perpetuals, force admirably: for this purpose, it is better to graft or bud them on the Dog-Rose, as it is so easily excited. It requires, also, but small pot-room; as, previous to potting, its roots may be pruned to within two inches of the stem, and apparently, with advantage; for, if placed in gentle heat, an abundance of fibres are immediately put forth, and the whole plant will soon have an appearance of great vigour. Those who wish for the luxury of forced roses, at a trifling cost, may have them by pursuing the following simple method:—Take a common garden frame, large or small, according to the number of roses wanted; raise it on some posts, so that the bottom edge will be about three feet from the ground at the back of the frame, and two feet in front, sloping to the south. If it is two feet deep, this will give a depth of five feet under the lights, at the back of the frame, which will admit roses on little stems as well as dwarfs. Grafted plants of any

of the Perpetual Roses should be potted in October, in a rich compost of equal portions of rotten dung and loam, in pots about eight inches deep, and seven inches over, and plunged in the soil at bottom. The air in the frame may be heated by linings of hot dung; but care must be taken that the dung is turned over two or three times before it is used, otherwise the rank and noxious steam will kill the young and tender shoots; but the hazard of this may be avoided, by building a wall of turf, three inches thick, from the ground to the bottom edge of the frame. This will admit the heat through it, and exclude the steam. The Perpetual Roses, thus made to bloom early, are really beautiful. They may also be forced in any description of forcing-house with success, by plunging the pots in old tan, or any substance that will keep their roots cool. It will at once give an idea how desirable these roses are, when it is stated that, by retarding and forcing, they may be made to bloom for eight months in the year.

Perpetual Roses do not bear seed in this country freely, but Louis Philippe may be planted with the common Bourbon, as may the *Rosa Pæstana*; they both bear seed abundantly, which would probably give some fine high-coloured varieties. *Grande et Belle* trained to a south wall, with *Gloire de Rosomène*, and *Lodoiska* with the Common Bourbon Rose, would possibly be the

parents of some large-flowering and splendid varieties.

An attempt to obtain a Mossy Crimson Perpetual might be made by planting Louis Philippe with the Single Crimson Moss. To roses, and many other gardening operations, the hacknied motto may justly be applied, "Nil desperandum."

HYBRID PERPETUAL ROSES.

This class has now become so rich in beautiful roses, that a separate notice must be devoted to them. In p. 39 is given the origin of Hybrid China Roses, which it is well known bloom but once in the season. Some of these hybrids or mules, unlike many plants of the same description, bear seed freely. These fertile varieties have been crossed with different varieties of China and Bourbons. From seed thus produced we have gained a new race of autumnal roses, bearing abundance of flowers during the whole of the summer and autumn, and now called Hybrid Perpetuals. Certainly a more beautiful and interesting class of roses does not exist; their flowers are large, very double, most fragrant, and produced till the end of October. Their habit is robust and vigorous in a remarkable degree; and, above all, they are perfectly hardy, and will grow well in any climate in Great Britain, however far north; but caution will be required in selecting varieties for cold and

damp localities, as those only that open freely should be planted. Some few are fine roses in a dry southern climate, and also when forced; but in a moist climate they will seldom or never open their flowers. I will mention a few that may be chosen without the least fear of disappointment. And first I must name the queen of this family, Madame Laffay; this, like the Crimson Perpetual, in its class, is at present unrivalled; words cannot give the effect of this rose; with its fine large foliage and rosy crimson flowers, it is perfectly beautiful, highly fragrant, and ought to be in every garden. We have a fine contrast in colour in the Duchess of Sutherland, which is a rose of equally luxuriant habits and fine foliage, with flowers of the most perfect shape; colour, delicate rose. One defect this rose has which ought not to be concealed — it will not give autumnal flowers constantly, but often makes shoots without a terminal flower-bud. Aubernon is a beautiful brilliant crimson rose, opening freely, and blooming abundantly during the summer and autumn. Of the same prolific habit is Rivers, so named by M. Laffay, who frequently “dedicates” (to use his own expression) roses to his friends. This is a rose of first-rate quality; flowers red, something like Brennus, very large, and produced in clusters of great beauty, flowering profusely all the autumn. Mrs. Elliott is a beautiful free-flowering and free-opening rose, with flowers of light crimson, tinged

with lilac. Like some others in this class, barren shoots are often produced in the autumn. William Jesse is a large and superb rose, crimson, with lilac tinge. This is certainly one of the most beautiful *very large* roses that exists; its flowers always open freely: like the preceding, every shoot does not give flowers, but with good culture it will bloom well in the autumn. Prudence Ræser is a hybrid noisette, blooming in large clusters, of exceeding beauty, and highly fragrant. As a standard, or as a pillar rose, this variety is peculiarly adapted; its flowers, not full-sized, are of a pale rose, with fawn-coloured centre, and elegantly shaped; every shoot, whether in summer or autumn, seems to give its terminal cluster of flowers. Among those roses that open freely, none are more beautiful than Comte d'Eu; it is, strictly speaking, a double dwarf Gloire de Rosomène, from which it was raised. This is a brilliant-coloured and fine variety. Reine de Lyon is also a new and fine rose, with erect habit, and very double dark crimson flowers, of the same fragrance as the Provence Rose. Duc d'Aumale is a new and very erect-growing variety, with brilliant crimson flowers of much beauty. To the above free-flowering and free-opening roses, may be added Louis Bonaparte, Comte de Paris, Julie Dupont, Lady Alice Peel, Dr. Marjolin, and Augustine Mouchelet. The following are varieties of first-rate excellence, but cannot be recommended

for moist climates; in warm and dry exposures, their flowers will open freely. Clementine Seringe, with flowers large as those of Brown's Superb Blush, and with the same peculiar fragrance as the cabbage rose, is a most superb variety; its flowers are placed on stiff erect foot-stalks; these are of a fine rosy blush: as a forcing rose, this is invaluable. Reine de la Guillotière is a superb brilliant crimson rose, which, not having opened so freely as usual this wet season (1843), I should not recommend for moist climates: this is a constant autumnal bloomer, and a very fine rose. Prince Albert, in 1842, was splendid everywhere; but owing to the too abundant moisture of the past season, scarcely any of its flowers have opened. So much is this rose influenced by climate, that when I, last autumn, visited France, the cultivators of roses would scarcely credit my assertion that it did not in general open well in England; they said it was impossible. When flowering in perfection, it is really beautiful, its flowers quite double, finely shaped, of a deep crimson purple, and *remarkably* fragrant: as a forcing rose, it is quite unrivalled.

In a recent visit to Paris (Sept. 30. 1843), I have had the pleasure of seeing a new rose of this family, "gained" by M. Laffay from seed, and named La Reine; one of the largest, most perfectly shaped, and, in short, the most beautiful in its range of colour, of any Hybrid Perpetual rose known. I

am inclined to judge, from its foliage and habit, that it has a near affinity to William Jesse. Its flowers are quite as large as, I think I may safely say larger than, those of that fine rose. They are most beautifully cupped, and quite double; but not too much crowded with petals, so as to lead to any fears of their not opening freely in our climate. Their fragrance is remarkable, having much resemblance to our old favourite the common Cabbage Provence Rose; and in their brilliant rose-colour, slightly, very slightly, tinged with lilac, give a pleasing change, as many varieties in this class have dull and rather sombre-coloured flowers.

All the robust-growing varieties of this family form admirable standards, and are particularly well adapted for planting in rows by the sides of walks, giving them plenty of manure, and the necessary culture required by these roses—removing a portion of their bloom buds in June; thus, if there are twelve clusters of bloom making their appearance, cut off five to within about six buds of the base of each shoot; these will soon push forth, and give fine flowers in August. Constant care should be taken to remove in the same manner all the clusters of blooms as soon as they fade. Louis Buonaparte and a few others are very apt to make barren shoots without terminal flowers. As soon as this can be ascertained, cut all such shoots to within six or eight buds of their base; they will then, in most cases, give fertile branches: in short

these roses require much summer pruning and attention to make them flower in great perfection in autumn. Madame Laffay, Prudence Ræser, Fulgorie, Mrs. Elliott, and William Jesse, will, in rich soils, form very fine pillar roses, and be made to flower, with summer pruning, all the autumn.

THE BOURBON ROSE.

(ROSA BOURBONIANA.)

It is now, perhaps, about twelve years since a beautiful semi-double rose, with brilliant rose-coloured flowers, prominent buds, and nearly evergreen foliage, made its appearance in this country, under the name of the "L'Ile de Bourbon Rose," said to have been imported from the Mauritius to France, in 1822, by M. Noisette. It attracted attention by its peculiar habit, but more particularly by its abundant autumnal flowering; still such was the lukewarmness of English rose amateurs, that no attempts were made to improve this pretty, imperfect rose by raising seedlings from it, though it bore seed in large quantities. This pleasing task has been left to our rose-loving neighbours the French, who have been very industrious, and, as a matter of course, have originated some very beautiful and striking varieties, and also, as usual in such cases, have given us rather too many distinct and fine-sound-

ing names attached to flowers without distinctive characters. In a little time we shall be able to rectify this very common floricultural error. Many fables have been told by the French respecting the origin of this rose. The most generally received version of one of these is, that a French naval officer was requested by the widow of a Monsieur Edouard, residing in the island, to find, on his voyage to India, some rare rose, and that, on his return to L'Ile de Bourbon, he brought with him this rose, which she planted on her husband's grave: it was then called Rose Edouard, and sent to France as "Rose de L'Ile de Bourbon." This is pretty enough, but entirely devoid of truth. Monsieur Bréon, a French botanist, and now a seedsman in Paris, gives the following account, for the truth of which he vouches:— "At the Isle of Bourbon, the inhabitants generally enclose their land with hedges made of two rows of roses, one row of the Common China Rose, the other of the Red Four-Seasons. Monsieur Perichon, a proprietor at Saint Benoist, in the Isle, in planting one of these hedges, found amongst his young plants one very different from the other in its shoots and foliage. This induced him to plant it in his garden. It flowered the following year; and, as he anticipated, proved to be of quite a new race, and differing much from the above two roses, *which, at the time, were the only sorts known in the island.*" Monsieur Bréon

arrived at Bourbon in 1817, as botanical traveller for the government of France, and curator of the Botanical and Naturalization Garden there. He propagated this rose very largely; and sent plants and seeds of it, in 1822, to Monsieur Jacques*, gardener at the Château de Neuilly, near Paris, who distributed them among the rose cultivators of France. M. Bréon named it "Rose de L'Ile de Bourbon;" and is convinced that it is a hybrid from one of the above roses, and a native of the island. Owing to the original being a hybrid, the roses of this family vary much in their characters; those that retain the leading features I have termed true Bourbons. I shall now notice and describe a few of the most striking and distinct varieties of this very charming group; and begin with *Armosa*, quite a new variety, very double and perfect in the shape of its flowers, which are of a delicate rose-colour: the plant is of medium growth. *Augustine Lelieur* is a charming rose, a true Bourbon, so vivid and so beautiful that it cannot be too much recommended: its flowers are very erect and bell-shaped, and as fine in October as in June. *Diaphane* is a small high-coloured rose, almost scarlet. This is not a true Bourbon, but a very pretty rose, of dwarf growth, adapted for the front of a border. *Dubourg* is also a hybrid Bourbon, of a different character to the last,

* Whence the name often given to the Common Bourbon Rose of "Bourbon Jacques."

as it is very robust and makes long shoots, generally terminated by a fine cluster of flowers: in rich soils this will make a fine pillar-rose. Duc de Grammont is also a hybrid Bourbon, very dwarf in its habit, with flowers of fine shape, and very double, inclining to purple. Earl Grey is a genuine Bourbon Rose, with large and double flowers, of a fine rose-colour, and the plant of a compact though vigorous growth; its flowers have a fault too common with these roses; they do not open well. Faustine is now an old variety; but a very pretty little rose, very dwarf in its habit, with flowers of that silvery pale blush, so peculiar to some varieties in this group.

Gloire de Rosomène is a hybrid of most remarkable habits. Its large foliage, luxuriant growth, and beautiful semi-double crimson flowers, make it one of the most desirable of this division; but not for grouping, as it outgrows all its congeners. As a pillar rose it will form a splendid object; indeed, I cannot imagine any thing more imposing in floriculture than a pillar, from twelve to fifteen feet high, covered with the splendid flowers of this rose from June till October: it will also form a fine standard. Gloire de Guerin, like the last, departs from the characters of the group; but, like all that I have retained, it has the pleasing feature of autumnal flowering. This is a dwarf rose, adapted for the front of the rose border. Ida is also a beautiful rose, with much

smaller flowers, perhaps of a still deeper carmine. The plant is dwarf, yet possesses all the characters of the true Bourbon Roses in the prominence of its buds, and in its foliage. *La Tendresse* has flowers of a silvery-pale rose-colour, very double and large. Its habit is robust, hardy, and luxuriant, fit for the centre of the rose bed. *Latifolia* is a fine bold rose, much like *Augustine Lelieur* in its colour and habit: a good rose, but not required in a collection where that rose is grown. *Madame Desprez*: this fine and robust rose has never yet bloomed so beautifully in this country as during this autumn (1837): its large clusters of very double flowers have indeed been superb. *Monsieur Desprez*, a distinguished French rose amateur, raised it from seed about five years since. It is, most probably, a little hybridised with the *Noisette Rose*, as it blooms in larger clusters than any other Bourbon Rose. *Marshal Villars* approaches to the *China Rose* in habit, which takes from it that compact growth peculiar to most of the true Bourbon Roses: this has flowers of a bright purple tinge, very vivid and double.* *Phillippart*, if not the same as *Augustine Lelieur*, is too much like it to be grown in the same collection. *Psyché* is a very remarkable rose, a hybrid of humble

* The flowers of this rose seldom open well; a distinguished rose amateur has expressively, but whimsically, named Bourbon roses of this character "hard-heads."

growth, with double pale pink flowers, of the most perfect shape.

Queen of the Bourbons is a fine variety, and very beautiful. Its flowers are of a vivid rose-colour, a little tinged with buff, very large and double. Phoenix is nearly a true Bourbon Rose of a fine rosy red.

Rivers, so named by a French rose cultivator, who raised it from seed, is a pretty delicate rose, a true Bourbon; and called by the originator an "extra fine rose:" it has not yet bloomed here well enough to support that character. Thimocles is a large and fine rose, very double, and a genuine Bourbon, of luxuriant growth, and distinct character. Victoire Argentée is one of those beautiful silvery-pale roses, with very double flowers, which often refuse to open freely. The White Bourbon, or Julie de Loynes, was raised from seed by Monsieur Desprez, who annually raises immense numbers of Bourbon and other roses from seed, to procure new varieties. This rose is a little hybridised with the Noisette, which has given it a clustered character, and, unfortunately, taken from its flowers that bold and peculiar shape, so beautiful in the Bourbon Roses. The French cultivators are at deadly strife respecting this rose; some swearing, by all their saints, that it is a veritable Bourbon, while others as stoutly maintain that it is a Noisette Rose. An Englishman, after listening to such

warm disputants (Frenchmen generally are), and to so "much ado about nothing," would coolly turn away and smile at such violent altercation, and their making a trifle "light as air" a matter of such grave importance. Walner is a true Bourbon Rose, dwarf, bright-coloured, and very distinct and pretty.

A few very remarkable additions have been made to this family since the publication of the first edition of this little work; which, were it not for the endless variations in flowers in which we find pleasure, would seem to leave us nothing more to wish for in Bourbon Roses. Dark crimson varieties, with double and finely-shaped flowers, *were* desiderata, but are so no longer; for in "Le Grand Capitaine," perhaps so named, in compliment to *our* "Great Captain," we have one of the most brilliant Crimson Scarlet Roses known; this seems a seedling from Gloire de Rosomène, as it has the same serrated foliage and habit. Splendens, or Crimson Madame Desprez and the Crimson Globe, seem to be all that can be wished for; they are both of the most robust habits, they bloom constantly, and their flowers open freely; these are of a rich purplish crimson, the latter is the deepest in colour. The first will probably form a fine pillar rose, and as a standard it equals in luxuriance of growth the most robust of our Bourbon Roses. Madame Nérard, as a pale rose-coloured variety, is most perfect in the shape of its flowers, and Desgaches, a fine rose-

coloured variety, blooming in large clusters, is equally beautiful and quite first-rate. Pucelle Genoise also is a fine large and double rose, apparently a hybrid of the China Rose, as its foliage approaches it in resemblance. Bouquet de Flore, and Emile Courtier, are true Bourbons, and most perfect and beautiful varieties, with large and double flowers of a deep rose-colour.

Among the novelties in Bourbon Roses, one of the most remarkable is Madame Lacharme, a rose raised at Lyons, and named after the wife of a rose cultivator there; this may with justice be called White Madame Desprez; it produces its beautiful white flowers, the outer petals of which are slightly tinged with blush, in large clusters, and has the same robust habit as that above fine and well-known rose; this will undoubtedly be a most popular variety; in fine contrast to the above are two new dark crimson Bourbons, Proserpine, and Paul Joseph, these are both of robust and luxuriant growth, producing their flowers on erect foot-stalks; foliage large, thick, and of a deep glossy green, flowers of the most brilliant crimson, slightly shaded with purple; the latter is possibly the darker of the two; but it is really difficult to say which one would prefer. Comice de Seine et Marne is also a new variety, with flowers of the most brilliant crimson, not quite so deep in colour as the before-mentioned, and not tinted with purple; this is a most splendid rose. *Enfant*

d'Ajaccio and Souvenir d'Anselme are two new roses of precisely the habit of Gloire de Rosomène, with flowers of the same colour, but quite double; these are both beautiful and very fragrant roses. A race of delicately pale flesh-coloured roses has sprung from Madame Nérard. Of these the most beautiful are Manteau de Jeanne d'Arc, almost white; and Reine de Congrès and Comtesse de Resseguier, of the most delicate blush; these are all elegant and beautiful roses.

In the preceding notices of sorts, I have purposely mentioned the habits of those that deviate a little from the characters of the generality; in forming a clump, it will therefore be seen which to place in the front, and which in the centre; several varieties in the catalogue not noticed here are equal in beauty to those that are; but as their habits have nothing particularly distinctive, I have, to avoid being tedious, not described them.

Bourbon Roses most certainly show themselves to greater advantage on stems from one to three feet in height, than in any other mode of culture; if on their own roots, they are too near the ground, and the autumnal rains spoil their delicate blossoms, by dashing the dirt upon them. They seem to grow well in all soils, but I should recommend, in spite of the above objection, those who have only a dry and poor sandy soil, to have plants on their roots, as the Dog-Rose will not flourish in such soils; though cultivated roses in soils of the

same description will grow most luxuriantly. Nature often seems to delight to puzzle us gardeners with anomalies that cannot be fathomed, clever as we are in our generation.

These roses require but little pruning; towards the end of March or beginning of April their shoots may be thinned, those that are killed by the winter removed, and long shoots shortened to within four or five buds.

I hope, in a few years, to see Bourbon Roses in every garden, for the "queen of flowers" boasts no members of her court more beautiful; their fragrance also is delicate and pleasing, more particularly in the autumn; they ought to occupy a distinguished place in the autumnal rose garden, in clumps or beds, as standards, and as pillars, in any, and in all situations, they must and will please. To ensure a very late autumnal bloom, a collection of dwarf standards, *i. e.* stems one to two feet in height, should be potted in large pots, and during summer watered with manured water, and some manure kept on the surface; towards the end of September or the middle of October, if the weather is wet, they may be placed under glass: they will bloom in fine perfection even as late as November. I consider the culture of these roses only in its infancy; we shall ultimately have the richest hues combined with perfection of form, and the complete plenitude of their flowers.

It is difficult to point out roses of this family that bear seed freely, except the Common Bourbon; but Acidalie, planted against a south wall, would probably give some seed. If any pollen can be found, it might be fertilised with the flowers of Julie de Loynes. A pure white and true Bourbon rose ought to be the object; therefore it should not be hybridised with any other species. Gloire de Rosomène may be planted against a south wall, with the Common Bourbon, with which it should be carefully fertilised: some interesting varieties may be expected from seed thus produced. Queen of the Bourbons, planted with the yellow China Rose, might possibly give some seeds; but those would not produce true Bourbon roses, as the former is a hybrid, partaking of the qualities of the Tea-scented roses. Dubourg, planted with La Tendresse, would give seed from which some very delicate Blush roses might be raised; and Phoenix, fertilised with the Common Bourbon, would also probably produce seed worth attention.

THE CHINA ROSE.

(ROSA INDICA.)

This rose is said by botanists to be a native of China, from whence it was introduced to our

gardens in 1789. Its ever-blooming qualities have made it a favourite, from the cottage to the palace; and perhaps no plants have contributed so much to enliven our cottage walls as the common China Rose (*Rosa Indica*), and the crimson China Rose, or *Rosa semperflorens*. These roses have been, and are, considered distinct species by botanists. Like all other cultivated roses, they sport much from seed; but the descendants of each may generally be recognised by a close observer. The common and its varieties make strong green luxuriant shoots, with flowers varying in colour from pure white to crimson. The crimson also takes a wide range; for though its original colour is crimson, yet I have reason to believe that the pure white, which was raised in Essex, came from its seed. In describing the varieties, those that are decidedly of the *Semperflorens* family I shall mark with S. after the name. I should most certainly have placed them in a separate division, were it not for the numerous intermediate varieties, in which it is impossible to decide to which species they lean.

Admiral Duperri, S., is a pretty, brilliant, crimson rose, distinct and worth cultivating: *Alba elegans*, though not white, as its name implies, is a fine double rose of the palest flesh-colour, and a good distinct variety. Archduke Charles is a new rose, and very beautiful. Soon after expansion, the tips of most of its petals change to crimson, giving it

a pretty variegated appearance. Belle Archinto and Bardon are both pale-coloured fine roses, very double and good, but resembling each other too much to be planted in the same bed. Beau Carmin, S., is a rich dark crimson-shaded rose, raised in the Luxembourg Gardens, and a fine and distinct variety. Belle de Florence is a very double and finely-shaped pale carmine rose, very distinct and pretty. Belle Isidore, like a few others in this division, is a changeable rose: its flowers will open in the morning, and show only the colour of the common China Rose, but by the afternoon they will have changed to a dark crimson. Camellia blanche is an old variety, with large globular flowers of the purest white: this rose has a fine effect on a standard, as its flowers are generally pendulous. Camellia rouge is also an old variety, not differing in colour from the common, but with stiff petals and very erect flowers, giving it a Camellia-like appearance. Cameléon, like Belle Isidore, is a changeable rose, and very properly named: this has larger flowers than Isidore, though not quite so double, and a more robust habit, so that it forms a good standard. The two finest varieties of these mutable roses are Archduke Charles and Virginie; during their change they are often variegated like a carnation, and are truly beautiful. Comtesse de Moloré is a new rose, said to be fine and distinct, but it has not yet bloomed here in perfection. Cou-

ronne des Pourpres is a dark crimson changeable rose; to this colour the French give the name of "pourpre," or purple: this is apt to mislead, as our purple is, as I scarcely need say, so totally different. Cramoisie éblouissante, S., and Cramoisie supérieure, S., the last, the finest, and most double, are both brilliant and excellent varieties of *Rosa semperflorens*. Countess of Albemarle is now a rose tolerably well known; this was a great favourite in France when first originated: it is a fine robust variety, very fragrant, and forms a good standard. Duc de Bordeaux is now an old, but still a pretty and distinct rose, with that bluish-lilac tinge peculiar to a few varieties in this division. Duchess of Kent, S., is quite a gem; so perfect is the shape of its very double and delicately coloured flowers, that it must and will become a favourite. Fabvier, S., approaches nearer to scarlet than any other China Rose; its flowers are not quite double, but very brilliant and beautiful. Gardenia is a variety, approaching to the Tea-scented roses in its habit; its flowers have also a peculiar fragrance: this is a distinct rose. Grandiflora is one of the most robust and finest of its class; it a little resembles that well-known rose, Triomphante, or Pæony Noisette, but has larger and more globular-shaped flowers: this is a fine and distinct variety, and forms a good standard. Henry the Fifth, S., is one of those vivid scarlet roses that in calm cloudy

weather are so beautiful; a hot sun very soon diminishes that excessive brilliancy of colour: this is a fine rose, with flowers very double and perfect. Joseph Deschiens has rather small but very double and perfect flowers of a reddish crimson; this is a variety quite distinct, and worth cultivation. Louis Philippe d'Angers, S., is a good rose, which, having often been sent from France as "Louis Philippe," has given rise to several mistakes, as there is a Tea-scented rose of this name, quite different in character, for which this has been substituted. Madame Desprez and Madame Bureau are both fine white roses, yet distinct in their habit. Madame Desprez is one of the largest white China Roses we possess. Marjolin is a fine dark crimson variety, likely to prove one of our most popular roses; but it is proper to mention that there are two Marjolins: this trick of giving the same name to two roses raised by opposition cultivators is very prevalent in France, and opens a door to deception; the Marjolin described here is a fine and distinct rose, robust and hardy, and likely to form a good standard. Napoléon is a sterling good variety, with large bell-shaped flowers of a fine bright pink. Roi des Cramoisiés, S., is a beautiful and brilliant rose, with flowers very double and nearly scarlet. Rubens or Ruban pourpre is a new and splendid rose from the Luxembourg Gardens: this is one of the finest shaded dark roses known.

Romaine Desprez is a beautiful and very double and large rose, finely shaped, of robust habit, distinct, and calculated to make a popular variety. Reine de Pæstum approaches the Tea Rose in habit and scent; its petals are too thin and flaccid to bear exposure to our summer and autumnal showers. Sulphurea superba is a fine and very double variety of the yellow Chinese or Tea Rose: its flowers are large, rather flat, and quite unique. Triomphe de Gand is a shaded rose of very robust growth, forming a fine standard. Triomphante, Pæony, Noisette, Indica superba, La Superbe, or Grande et Belle, for like all very good and old roses it has several names, is a fine and distinct variety, erect and robust in its growth, and forming a fine standard; an entire clump of this rose, with its large, shaded, crimson flowers, would have a fine effect.

New China Roses are raised with such facility in France that it is difficult to cultivate and describe all that are introduced. In list No. II. I have given the new and most desirable varieties, but to a few I ought to give a word or two of praise.

As a white China Rose, Clara Sylvain is quite unequalled; it grows so freely, its flowers are so globular, and it gives them in such abundance, that it must be a favourite. Miellez is pretty from its erect clusters of flowers, something like Aimée Vibert Noisette; but they are not double enough to compete with Clara Sylvain. Belle

Emile, Eugène Hardi, and Mrs. Bosanquet are all beautiful roses of their class; their colours are all of the most delicate blush or flesh colour. Augustine Hersent, although not a new rose, is not enough known; it is one of the very finest bright rose-coloured China Roses we possess, and of most hardy and luxuriant habits. Fénélon (Desprez) is a deep rose-coloured variety, with erect clusters of flowers, which are large and very double. Prince Charles and Eugène Beauharnais are two Luxembourg* roses of great excellence; their flowers are large and globular, of a fine rosy red: the latter is the deeper in colour.

In cultivating China Roses but little care is required, as most of them are quite hardy; all those marked S., as varieties of *Rosa semperflorens*, are adapted for the front edges of beds or clumps, as they are of more humble growth than the varieties of the Common. It must also be recollected that the latter are those alone adapted for standards. The varieties of *Rosa semperflorens*, though they will exist for several years on the Dog Rose stock, yet do not form ornamental heads, but become stunted and diseased; on the contrary, the varieties of the China Rose, as standards, particularly on short stems two to three feet in height, form magnificent heads swelling and uniting with the stock, and giving a mass of bloom from June to November; on tall stems I

* Raised in the Gardens of the Luxembourg by M. Hardy.

have not found them flourish equally. About the end of March, not earlier, the branches of standards will require thinning out, and shortening to about half their length; in summer a constant removal of their faded flowers is necessary, and this is all the pruning they require.

Every well-appointed flower-garden ought to have a collection of China Roses worked on short stems in large pots; these, by surface manuring, and manured water, may be grown to a degree of perfection of which they have not yet been thought capable; and by forcing in spring, and retarding in autumn by removing their bloom-buds in August, they will flower early and late, so that we may be reminded of that pleasant season “rose-tide” the greater portion of the year.

To succeed in making these roses bear and ripen their seed in this country, a warm dry soil and south wall is necessary; or, if the plants are trained to a flued wall, success would be more certain. If variegated China Roses could be originated they would repay the care bestowed. This is not too much to hope for, and, perhaps, by planting *Camellia Panaché* with *Miellez*, *Camelée* with *Camellia Blanc*, and *Etna* with *Napoléon*, seeds will be procured from which shaded and striped flowers may reasonably be expected. *Eugène Beauharnais* with *Fabvier* would probably produce first-rate brilliant coloured flowers. *Triomphante*, by removing a few of the

small central petals just before their flowers are expanded, and fertilising them with pollen from Fabvier or Henry the Fifth, would give seed; and, as the object ought to be in this family to have large flowers with brilliant colours and plants of hardy robust habits, no better union can be formed. China Roses, if blooming in an airy greenhouse, will often produce fine seed; by fertilising their flowers it may probably be ensured. In addition, therefore, to those planted against a wall, some strong plants of the above varieties should be grown in pots in the greenhouse.

THE TEA-SCENTED CHINA ROSE.

(*ROSA INDICA ODORATA.*)

The original *Rosa odorata*, or Blush Tea-scented Rose, has long been a favourite. This pretty variation of the China Rose was imported from China in 1810; from hence it was sent to France, where, in combination with the yellow China or Tea Rose, it has been the fruitful parent of all the splendid varieties we now possess. Mr. Parkes introduced the yellow variety from China in 1824; and even now, though so many fine varieties have been raised, but few surpass it in the size and beauty of its flowers, semi-double as they are; it has but a very slight tea-like scent,

but its offspring have generally a delicious fragrance, which I impute to their hybridisation with *Rosa odorata*. In France the yellow Tea Rose is exceedingly popular, and in the summer and autumn months hundreds of plants are sold in the flower markets of Paris, principally worked on little stems or "mi-tiges." They are brought to market in pots, with their heads partially enveloped in coloured paper in such an elegant and effective mode, that it is scarcely possible to avoid being tempted to give two or three francs for such a pretty object. In the fine climate of Italy Tea-scented Roses bloom in great perfection during the autumn: our late autumnal months are often too moist and stormy for them, but in August they generally flower in England very beautifully. I was much impressed in the autumn of 1835 with the effects of climate on these roses; for in a small enclosed garden at Versailles I saw, in September, hundreds of plants of yellow Tea Roses covered with ripe seeds and flowers. The French cultivators say that it very rarely produces a variety worth notice. The culture of Tea-scented Roses is quite in its infancy in this country, but surely no class more deserves care and attention; in calm weather, in early autumn, their large and fragrant flowers are quite unique, and add much to the variety and beauty of the autumnal rose garden.

Among the most distinct varieties known to

be worth culture, for many new Tea-roses from France will not flourish in our climate, are the following:—

Aurore, an old but fine rose, a hybrid of the yellow China and *Rosa odorata*, and partaking of both, for its flowers are, when first open, of a delicate straw colour, soon changing to blush. Belle Hélène is a pale variety of the original Tea Rose, with flowers larger and more double; a distinct and good rose. Caroline, a pretty rose, with flowers very double, of a bright rose colour, and very perfect in their shape. Flon is a new and beautiful rose, a sort of fawn-coloured blush; its flowers very large and fragrant. Fragrans, one of our oldest varieties, is but a very slight remove from the crimson China, but it has acquired, by being hybridised, the pleasing perfume of this family. Goubault is a most excellent rose, as it is remarkably robust and hardy, and will probably form a fine standard. Hardy, or Gloire de Hardy, is a most superb vivid rose of the largest size, of most luxuriant growth, and well calculated for a standard; this will be one of our popular Tea Roses. Hamon is also a very fine rose, but rather too delicate for the open borders: this is a changeable variety; sometimes its flowers are blush tinged with buff, and sometimes, when forced, they are of a deep crimson. Lyonnais is a very large pale flesh-coloured rose, hardy, and

worthy the attention of the amateur. Mansais is a rose in colour something like Noisette Jaune Desprez, but not constantly so; this is a fine rose, but I cannot yet pronounce whether it is hardy or otherwise.* Odoratissima is a very free-growing and pretty lilac rose, more than ordinarily fragrant, and apparently very hardy. Palavicini has been much admired and also much depreciated, owing to the different appearances it has taken under cultivation. On its own roots, and in a weak state, it is poor and insignificant, looking like a bad variety of the yellow China Rose; but when budded on a strong branch of the Common China or the Blush Boursault, it will bloom in a splendid manner, so as to appear quite a different rose: a branch budded a few years ago, and blooming very finely on the wall of the council room at the Horticultural Society, attracted much attention. I believe it is of Italian origin, as many fine Tea-scented and China Roses are raised from seed annually in Italy, but not distributed. Princesse Marie is one of the finest roses in this group. I saw this variety blooming in Paris in June (1837), in greater perfection than any other Tea Rose: its flowers were from four to five inches in diameter. Pactolus is a yellow rose, of a pale sulphur, approaching to a bright yellow in the centre of the flower: this

* This proves to be as hardy as the most robust of the Tea Roses.

proves robust and hardy, and one of the best yellow Tea Roses known. *Rêve du bonheur* is a singularly beautiful tinged rose, forming a fine large cup, but not very double. *Silène* is a robust and hardy variety, with large shaded red and blush flowers, very double: this will make a fine standard, and grow in any situation. *Strombio* is now an old rose, but no variety can be more deserving of cultivation; when growing on a standard, its large and pendulous cream-coloured flowers are quite beautiful. *Taglioni* is a full sized, fine white rose, shaded with blush towards its centre, and a hardy and good variety. *Triomphe du Luxembourg* has made some noise in Paris; in the autumn of 1835 it was sold at thirty or forty francs per plant; it does not bloom quite so fine in this country as in France, but under any circumstances it is a fine and distinct variety: its colour is rose very peculiarly tinged with yellowish buff. The yellow Tea or yellow China Rose, for they are one and the same, is placed here, as it has decidedly more of the habit and appearance of the Tea-scented Rose than of the China: its smooth glossy leaves and faint odour of tea sufficiently show its affinity.

To these some new varieties of extraordinary beauty have been added, among which *Elisa Sauvage*, a fine straw-coloured rose, of rather a deeper tinge than the Yellow Tea, with flowers very large and double, richly deserves cultivation.

Princesse Hélène of the Luxembourg is also a fine rose, of the same range of colour, with very large globular flowers. Duchesse de Mecklenbourg is of a more creamy yellow, and really a most beautiful rose. *Lutescens Grandiflora* is one of the largest of these yellow Tea Roses; its flowers are cupped, very large, and of deep yellow towards the centre of the flower-cup.

Belle Allemande may be described as a creamy fawn-coloured rose. The blending of the colours in these roses is difficult to describe; this is also a most magnificent rose, and apparently very hardy and robust. Anteros or Antherose is also a new rose of this range of colour, but often much paler than Belle Allemande, depending upon climate and situation; it may generally be calculated that Tea Roses are less vivid in our moist climate than in France. Comte Osmond is a beautiful cream-coloured rose, very double and perfect in its flowers.

In rose-coloured varieties we have two or three very superb. Gigantesque, a Luxembourg Rose, is one of the largest Tea Roses we possess, and richly deserves its name. Bougère is a most singular and beautiful rose; its flowers are of a fine rose-colour, often slightly shaded with bronze, and of first-rate form and quality. Mareschal Vallée is also a rose-coloured Tea Rose, with flowers very large and double; this is a new and first-rate variety.

Some very beautiful roses of this class have been introduced since the publication of the second edition, among which *Devoniensis* takes a high rank. This is not yellow, as was at first supposed, but of a fine creamy white; and, when cultivated highly, produces flowers of an immense size: for forcing, this is a most valuable rose, and highly fragrant. *Comte de Paris* is also a magnificent variety, with finely-cupped flowers of pale rose colour. This variety opens freely in any situation, and is very hardy and robust. *Josephine Malton*, equally hardy and robust, is a rose of the first class, having large and elegantly-formed cupped flowers; colour creamy white. *Adam* is one of the very largest roses in this family: its flowers are not so regularly shaped as the above; colour rose, very fragrant, and showy. *Moiré*, a fawn-coloured variety, shaded with cream and rose, has petals of remarkable substance, so that it withstands heat much better than most in this class: this is a first-rate and beautiful rose. *Safrano*, like the old yellow Tea Rose, is most beautiful in bud, and, when half expanded, its flowers are then of the brightest saffron; but, when fully open and exposed to the sun, they soon fade to nearly white.

As these interesting roses require more care in their culture than any yet described, I will endeavour to give the most explicit directions I am able, so as to insure at least a chance of success.

One most essential rule must be observed in all moist soils and situations; *when grown on their own roots they must have a raised border in some warm and sheltered place.* This may be made with flints or pieces of rock in the shape of a detached rock border, or a four-inch cemented brick wall, one foot or eighteen inches high, may be built on the southern front of a wall, thick hedge, or wooden fence, at a distance so as to allow the border to be two feet wide; the earth of this border must be removed to eighteen inches in depth, nine inches filled up with pieces of bricks, tiles, stones, or lime rubbish; on this place a layer of compost, half loam or garden mould, and half rotten dung well mixed, to which add some river or white pit-sand: this layer of mould ought to be a foot thick or more, so as to allow for its settling: the plants may be planted about two feet apart. In severe frosty weather, in the dead of winter, (you need not begin till December,) protect them with green furze or whin branches, or any kind of light spray that will admit the air and yet keep off the violence of severe frost. I have found the branches of furze the best of all protectors. With this treatment they will seldom receive any injury from our severest winters, and they will bloom in great perfection all summer. This is the culture they require if grown as low dwarfs on their own roots; but perhaps the most eligible mode for the amateur is to grow them

budded or grafted on low stems of the Dog Rose, or Blush Boursault, which seems, if possible, even a more congenial stock; they may be then arranged in the beds of any flower-garden, and graduated in height so as to form a bank of foliage and flowers. Grafted or budded plants when established will in general brave our severest winters; but still it will be most prudent in November either to remove them to some warm shed, and lay their roots in damp mould, or to reduce their heads and give each plant an oiled paper cap.* This is a mode practised in the north of Italy with great success, to protect their tender roses and other plants; and though paper caps may not be thought objects of ornament on an English lawn, yet the method will be found very eligible in many cases. In March those that have been laid on the shed for protection may be removed to the flower borders, pruning off all superfluous and dead shoots; they will bloom the following summer in great perfection, and in general surpass those that have been suffered to remain in the

“ If these beautiful Roses are grown as standards they *must* have protection: the most simple method is to remove them in December, and lay their roots in the ground near a north wall or fence, their heads resting against the wall; over these a mat should be nailed during frost. For forcing or blooming early in spring in the greenhouse they form beautiful plants, budded on neat stems about 1 ft. in height: these, if potted in November, give abundance of flowers in spring, of a larger size than when grown on their own roots.”—*Extract from Catalogue for 1843,*

ground without protection. Some of the varieties are much more robust and vigorous than others, and equally beautiful as those of more delicate habits; it will therefore be scarcely worth while to grow any but what are of known hardihood and vigour. I have pointed out some of these in my notices, but time can only make a knowledge of their habits more perfect. Worked plants of Tea-scented roses force very well: they do not require to be established one year in pots, for if only potted in October or November, and forced with a gentle heat in January and February, they will bloom finely; in March and April the extreme beauty of their foliage and flowers will amply repay the attention given to them, as they have a peculiar softness and delicacy of appearance when forced and growing luxuriantly.

With attention, some very beautiful roses of this family may be originated from seed, but the plants must be trained against a south wall; if flued the better, in a warm dry soil, or grown in pots under glass: a warm greenhouse, or the forcing-house will be most proper for them, so that they bloom in May, as their hips are a long time ripening.

For yellow roses, *Lutescens grandiflora* and the *Duchesse de Mecklenbourg* may be planted with the Yellow Tea, which abounds in pollen; some fine roses, almost to a certainty, must be raised from seed produced by such fine unions:

for the sake of curiosity a few flowers of the above might be fertilised with the Double Yellow Briar or *Rosa Harrisonii*. The Yellow Tea bears seed abundantly, but it has been found, from repeated experiments, that a good or even a mediocre rose is seldom or never produced from it; but fertilised with the Yellow Briar, something original may be realised. Gigantesque and Tea Hardy, planted with Prince Esterhazy, would produce seed of fine quality, from which large and bright rose-coloured varieties might be expected. Archiduchesse Thérèse and Duchesse de Cazes, planted with Bride of Abydos, would give pure white Tea Roses; and Mansais with Dremont would probably originate first-rate fawn-coloured roses; but the central petals of Mansais should be carefully removed with tweezers or pliers, as its flowers are too double for it to be a certain seed-bearer. Bélisaire, which is a hybrid, approaching very near to the China Rose, should be planted with William Wallace, as fine and large Crimson Tea roses are still wanting.

THE MINIATURE ROSE.

(*ROSA LAWRENCEANA*.)

In the botanical catalogues this curious little rose is said to have been introduced from China

in 1810, and botanists have made it a species; but, like the Rose de Meaux and Pompon Roses, which are dwarf *varieties* of *Rosa centifolia*, this is undoubtedly nothing but a dwarf seminal *variety* of the common China Rose. Many plants that have been long under cultivation have a tendency to produce from seed these pigmy likenesses of themselves: among these little “faerie queens,” Caprice des Dames is a pretty morsel of beauty with vivid rose-coloured flowers. Gloire des Lawrenceanas is one of the prettiest of the tribe; its flowers are of a dark crimson, and larger than those of any other variety. Jenny and Lilliputienne are both of them bright-coloured and pretty roses. Nigra has not black flowers, but they are of the darkest crimson, and very pretty. This was named by some florist, with that exaggeration peculiar to the craft; this is not done by the florist wilfully to deceive, but is merely given as descriptive of what *he wishes the flower to be, rather than of what it really is.* Brugmansia sanguinea is a case in point; and many other sanguineas and coccineas might be mentioned, in which the colours of the flowers which bear those imposing names approach to any thing rather than blood or scarlet. To return to Roses; Pallida is the only variety in this division approaching to white. Its flowers, when they first open, are nearly of pure white, but they soon change to a pale flesh-colour: this is rather a delicate rose,

seeming very impatient of cold and damp. *Petite Laponne* is a brilliant little rose, quite worthy a place in the group; as is also *Retour du Printemps*, which is different from all the others; its pretty little flowers being surrounded by a leafy calyx, and the whole plant tinged with a reddish colouring matter.

These roses are all very impatient of moisture, and in all moist soils require a very dry warm raised border. I have not yet had an opportunity of seeing them grow in dry soils, but I think it probable that the light sandy soils of Surrey would suit them admirably. In cold situations it will be advisable to grow them constantly in pots, protecting them in a cold pit or frame till January, and then, if required to bloom early, remove them to a warm situation in the greenhouse, or force them with the Tea-scented Roses. A collection of these little rose-bushes, covered with their bright flowers in March and April, will be found one of the most eligible and unique ornaments for the drawing-room.

THE NOISETTE ROSE.

The original of this remarkable group, the “*Blush Noisette*” Rose, was raised from seed in

America by Monsieur Philippe Noisette, and sent by him to his brother, Monsieur Louis Noisette, the well-known nurseryman at Paris, in the year 1817. Perhaps no new rose was ever so much admired as this. When first introduced, its habit was so peculiar, and so unlike any other known variety, that the Parisian amateurs were quite enraptured with it. It was produced from the seed of the old Musk Rose (*Rosa moschata*), the flowers of which had been fertilised with the common China Rose. The perfume of the Musk Rose is very apparent: its tendency to bloom in large clusters also shows its affinity to that old and very remarkable rose, but since its introduction to France so many seedlings have been raised from it, and so many of these are evidently hybrids of the Tea-scented and other roses, that some of the roses called "Noisettes" have almost lost the characters of the group; for, in proportion as the size of the flowers have been increased by hybridising, their clustering tendency and the number of them in one corymb has been diminished. Among the varieties most deserving of notice is Aimée Vibert, or "*Rosa nivea*," a seedling from the *Rosa sempervivens plena*, which it resembles, but much surpasses its parent in the valuable quality of autumnal blooming. Nothing can be prettier than a large plant of Aimée Vibert Noisette, covered with its snow-white flowers, in September and October. Andreselle is a fine

lilac rose, in colour like that old variety Noisette Bougainville, but much superior in the size and shape of its flowers. Ariel is a fine and vigorous-growing rose, blooming in immense corymbs; its flowers are of the most delicate blush, tinged with buff: this is a distinct and pretty variety. Belle Violette is a genuine Noisette, and a very neat and pretty little rose: its flowers are of a rosy lilac, and very distinct and good. Belle Antonine is a pillar Noisette, of very robust habit, with flowers delicately-coloured and well-shaped. In designating some of these as pillar Noisettes, those varieties that are very vigorous growers, making long and flexible shoots, are intended. Boulogne is one of the few dark-coloured Noisettes, and when first its flowers open they are very beautiful, their colour being a dark crimson-purple. Beurre Frais is singular, but scarcely double enough; its delicate butter-colour soon changes to white in the sun. Bouquet tout fait, a pillar Noisette, is a most vigorous grower, forming immense corymbs; this may be taken for the original Noisette at first sight, but it is more fragrant, and its flowers buff towards their centre. Camellia Rose, but not the Camellia Rose of the French catalogues, is a pillar Noisette of first-rate excellence, with large and finely-shaped bright red flowers, and a most luxuriant grower. Cadot is also a pillar Noisette, with large and very double flowers: a good and distinct variety. Cerise is also a pillar Noisette

equal to either of the foregoing: its large and deep-coloured globular flowers, of a deep rosy purple, are beautiful at any time and in any situation. Charles X. is a pretty rose in very dry weather, but in moist weather its buds will not open, neither will it live long as a standard, never forming a proper union with the stock. Castalie is a variety, of a delicate flesh-colour, very distinct and pretty.

Clarisse Harlowe is a pillar rose of first-rate excellence; its flowers are very large and double, and its growth excessively vigorous, so that it soon forms a large column. Fellenberg is a Noisette well deserving of praise, if only for its brilliant crimson. It is but a short time since a bright crimson Noisette did not exist: this rose, when grown luxuriantly, is a most charming plant. Grandiflora is a very old rose, but mentioned here that its synonymes may be given: as "Noisette Lee," "Blush Perpetual China," and "Triomphe des Noisettes." It has been extensively cultivated. Hardy is a pillar Noisette, quite worth cultivation; its large pale flowers have a deep rose and buff centre; its habit is so vigorous that it will shoot from six to eight feet in one season. Jaune Desprez, or the new French Yellow Noisette, is a well-known and much-esteemed rose: as a pillar or a standard it is equally beautiful; its fragrance is also very remarkable. This was originated by M. Desprez about fifteen years since, and is still,

and will be for some time to come, a very popular rose. It is, most probably, a hybrid between the Yellow Tea and a Noisette rose of some kind: it sold for a high price in France, when first sent forth to the rose world, as its name was very tempting, for a yellow fragrant Noisette rose was thought to be worth any price. The name, like many other floral names, was, certainly, quite calculated to make an impression. Its rosy copper-coloured flowers are very singular, and so powerfully fragrant that one plant will perfume a large garden in the cool weather of autumn. A pillar of this rose, twelve or twenty feet high, would be a grand object on a well-kept lawn. Lamarque is another hybrid Noisette, approaching to the Tea-scented rose in the size and fragrance of its flowers. This is a most vigorous grower, but not quite so hardy as Jaune Desprez. As a standard it is quite superb, for its large pale sulphur-coloured or nearly white flowers are pendant from their weight, and have a fine effect. It is rather impatient of cold, and will not bloom unless budded on some strong-growing rose: on its own root it is a weak grower, and scarcely like the same rose when grafted and grown vigorously. Lelieur is a pretty little dark purplish-crimson rose, and deservedly a favourite, as its colour is so vivid: the point of each petal is tipped with white. La Biche is a pillar Noisette, with very large pale flowers, inclining to fawn-colour in the

centre: a very fragrant, beautiful, and distinct rose.

Luxembourg is a fine variety, with large and very double flowers, of a bright purplish rose: this will probably prove a good climber, and if so, it will form a magnificent pillar. Madame Laffay was raised from seed by Monsieur Laffay, and sold at a high price; but its habit is so delicate, and its flowers so small, that it has not pleased the generality of amateurs. Nankin, or "Noisette à boutons Nankin," or "Noisette mutabilis," is a very distinct and pretty rose. In the morning, before the sun has much power, or in cloudy weather, its clusters of flowers are of a bright nankin-colour, changing to white a few hours after expansion. Princesse d'Orange is a pretty and fragrant white Noisette: its flowers are sometimes very curiously and irregularly shaped. The Red Noisette, a very old variety, was raised from seed by Mr. Wells, of Redleaf: it is a pretty bright semi-double rose, now eclipsed by new and fine varieties. Smith's Yellow is certainly more nearly allied to the Tea-scented roses than to the Noisettes, for of this family it has not a feature: if forced, this is a fine rose, but it is scarcely fit for the open air in this country, as the moisture of the atmosphere glues its outer petals together so firmly that its flowers seldom or never open.

To Noisette Roses but few striking additions

have been made since 1837 ; but the following are pretty : indeed this term may be applied to all the Noisettes known. Miss Glegg is a white rose tinged with blush, of medium growth, worth cultivation. Ne plus ultra is a fine cream-coloured rose, which forces admirably, and is highly fragrant. Euphrosine, a miniature likeness of Jaune Desprez, with the same peculiar fragrance, but less of fawn colour, and Vitellina, one of the same character, but inclined to cream colour, are both interesting varieties. Corymbosa is a remarkable rose, with pure white flowers ; its foliage is rough, dark green, and totally unlike that of any other rose. Zobeide is a very pretty variety, with flowers of a vivid rose colour. We have so many pale Noisettes, that this is a welcome addition. Duc de Nemours is a new rose ; this has lilac-rose flowers, which are very double and well-shaped. Victorieuse, like Lamarque and several others, is a hybrid Tea Rose of first-rate qualities, but not very hardy.

We have but few additions to this class ; in fact there are only two worthy of especial notice ; these have been raised at Angers, from Noisette Lamarque, and no two roses have perhaps so well rewarded with their beauty the care of a cultivator : the first in merit is Noisette Cloth of Gold, called in France Chromatella. One would suppose, to see this rose in bud, that it could not be a yellow rose, as the extreme outer petals are nearly of a cream colour, but when expanded it is one of

the most brilliant and beautiful of yellow roses, with petals thick and waxy, bearing exposure to the hottest sun without fading. In habit it is very robust, bearing in this respect much resemblance to *Jaune Desprez*; its leaves are large, shining, and the whole plant, when in luxuriant growth, most beautiful. While rare, as at present, it would not be prudent to expose it during the winter in the open border; a south wall will probably be the best situation for it, as it seems to delight in heat; but when more abundant it may doubtless be planted out as a pillar rose, for which it is admirably adapted, as it makes shoots four to six feet in length in one season: cultivated in this manner it will doubtless require protection. *Noisette Solfaterre* is of the same parentage, with flowers not so globular as the preceding, but rather flat, like those of *Jaune Desprez*; colour pale lemon, leaves more pointed and narrow, like those of its parent. This is a rose of much beauty, and of the same robust habit as *N. Cloth of Gold*; with regard to treatment, it will be advisable, at present, to plant it against a south wall, till its capability of bearing our winters is tested.

Since the above was written a new crimson *Noisette* has for the first time bloomed. This is called *Pourpre de Tyr*. Its flowers, however, are not of Tyrian *purple*, but brilliant crimson, large, and very double. The habit of the plant is exceedingly robust. Foliage large, dark green, and

abundant. This is undoubtedly the finest crimson Noisette rose known.

The individuals of this group are so varied in character, that they may be employed as objects of ornament in a variety of ways. I will first give their culture as pillar roses, for which some of them are so finely adapted. Perhaps the most picturesque mode of growing pillar roses is to group them in clumps of three, five, seven, or nine, or to any extent in proportion to the size of the ground required to be ornamented. A group of rose pillars, on an artificial mound, has a very imposing effect, and in wet situations this will be found the most advantageous mode of growing them. The posts should be made of yellow deal, or larch, or oak, and charred as far as inserted in the ground; they should be from ten to fifteen feet in height, and stout, so that they can be firmly fixed in the ground; each post ought to be, at least, from nine to twelve inches in circumference. For roses of more humble growth, iron stakes, from six to seven feet in height, will be found more light and elegant in appearance than those of wood, and of course more durable. It must be borne in mind, that pillar roses cannot have too much manure; therefore, when they are planted, mix plenty with the soil they are planted in, and give them an annual surface dressing.

As standards, Noisette Roses require but little culture; the principal care is to be prompt in

cutting off the decayed and decaying clusters of flowers, during the blooming season; and, in March, to thin out their superfluous branches. All the pillar Noisettes form fine drooping standards: as dwarfs for beds, many of the varieties are very eligible, for they will grow and bloom luxuriantly in all soils and situations. To ensure their receiving no injury in *very* exposed situations, cut them down to within a foot of the surface of the soil in November, and place over each plant, or rather thatch it, with a thick covering of furze branches, to continue on till March. This will effectually protect them from the frost. This covering, as elsewhere recommended, must be removed gradually, so that the young and tender shoots are not exposed to the cold air too suddenly. For ornamenting wire-fences these roses are also admirably adapted, as they can be trained with great facility, and they will form, in such situations, a blooming boundary for at least four months in the year.

But few of the Noisette Roses will bear seed in this country; the following, however, if planted against a south wall, and carefully fertilised, would probably produce some. The object here should be to obtain dark crimson varieties with large flowers, and for this purpose Fellenberg should be fertilised with Cerise or Boulogne, and again, Cerise with Fellenberg. Cerise may also be planted with the China Rose Fabvier, and Bou-

logne with the same; if seed can be procured, fine deep-coloured and nearly genuine Noisette roses would be produced. It will be interesting also to try Noisette Nankin fertilised with the Yellow China; from this union yellow or buff-coloured Noisettes might possibly be originated, and these of course would be unique and of great interest. Beurre Frais with Duchesse de Mecklenbourg would probably give straw-coloured varieties, and these would be large and fragrant, as in Lamarque and Jaune Desprez. In these directions for procuring seed from roses by fertilising, I have confined myself to such varieties as are almost sure to produce it; but much must be left to the amateur, as many roses may be made fertile by removing their central petals, and, consequently, very many varieties that I have not noticed may be made productive.

THE MUSK ROSE.

(ROSA MOSCHATA.)

The White Musk Rose is one of the oldest inhabitants of our gardens, and probably more widely spread over the face of the earth than any other rose. It is generally supposed that the attar of roses is prepared in India from this species, and

that this is also the rose of the Persian poets, in the fragrant groves of which they love to describe their "bulbul," or nightingale, as enchanting them with its tuneful notes. The probability that this is the famed rose of Persia is strengthened by the fact, that it is much more fragrant in the evening, or in the cool weather of autumn, than at any other time or season, and probably in the hot climate of Persia, *only so* in the coolness of night, when nightingales delight to sing. A recent traveller also remarks that the roses of Persia are remarkably small and fragrant. There are doubtless many seminal varieties of the species; their flowers differing in colour, but possessing the leading features of the original. Olivier, who travelled in the first six years of the French republic, mentions a rose tree at Ispahan, called the "Chinese Rose Tree," fifteen feet high, formed by the union of several stems, each four or five inches in diameter. Seeds from this tree were sent to Paris, and produced the common Musk Rose. It seems therefore possible and probable, that this has been the parent of nearly all their garden roses; for, like most orientals, their habits are not, and have not been, enterprising enough to stimulate them to import roses from distant countries. Large and very old plants of the Musk Rose may sometimes be seen in the gardens of old English country houses.

The Blush Musk, or Fraser's Musk, or Rosa

Fraserii, is not quite a pure Musk Rose: but as it is the only rose of this division of the colour, and also very fragrant, it has been much planted: its flowers are semi-double, and produced in large clusters. Eponine is a pure white, and very double variety, one of the prettiest of the group. The fringed or toothed Musk Rose has the end of each petal indented: this is a vigorous-growing and very fragrant little rose. Princesse de Nassau is a very distinct and good variety, very fragrant, and blooming in large clusters; the flower-buds, before they open, are nearly yellow, changing to cream colour as they expand. The Ranunculus, or new White Musk, is merely an improved variety of the old or original Musk Rose, with flowers more double. Tea-scented is a hybrid, with large flowers of a pure white, and very pretty; this is apparently a seedling from the Musk Rose, fertilised with some variety of the Tea-scented Rose, as it has a most peculiar habit and perfume.

Moschata Nivea, or the "Snow Bush," and one or two other roses, from Nepaul, have the scent peculiar to this group; but as they bloom but once in the summer, and differ totally in some other respects from the true *Rosa moschata*, I have not included them. For the culture of the roses of this division, that recommended for Noisette roses, in beds and as standards, may be adopted, as their habits are very similar.

THE MACARTNEY ROSE.

(ROSA BRACTEATA.)

The single Macartney Rose was brought from China, in 1795, by Lord Macartney, on his return from his embassy to that country. It now forms the original of a pretty family; but as it does not bear seed freely, even in France, fine varieties, as yet, are not abundant; its strictly evergreen and shining foliage is a beautiful feature; and I hope ere long to see numerous varieties, with double flowers of the same brilliant hues as our other fine roses possess. Time will prove; but I think it is not too much to anticipate, that, ultimately, we shall not be satisfied unless *all* our roses, even the moss roses, have evergreen foliage, brilliant and fragrant flowers, and the habit of blooming from June till November. This seems to be an extravagant anticipation; but perseverance in gardening will yet achieve wonders. The Double (the old variety) was the first double Macartney Rose raised from seed: it is mentioned here to caution any one from planting it, as it is totally worthless, its flowers constantly dropping off without opening. The Double Blush or Tea Victoire Modeste is so much hybridised with the Tea-scented rose, that it has lost many of the characters of

the group: in dry situations this is a most beautiful rose, but in wet weather its flowers do not open well. *Maria Leonida* is now an established favourite: its fine bell-shaped flowers of the purest white, sometimes slightly tinged with pink towards their centre, and its bright red anthers peeping from among its central petals, give it an elegant and pleasing character. *Rosa Hardii*, or *Rosa Berberifolia Hardii*, is a most interesting rose, lately raised from seed by Monsieur Hardy, of the Luxembourg Gardens, from *Rosa involu-crata*, a variety of *Rosa bracteata*, fertilised with that unique rose, *Rosa berberifolia*, or the Single Yellow Persian rose. This curious hybrid, like its Persian parent, has single yellow flowers with a dark eye (much like *Cistus formosus*), and evergreen foliage; it seems quite hardy, and forms the very prettiest little bush possible. It will probably be the parent of an entirely new group; and what can be imagined more interesting in roses than varieties with double yellow flowers and evergreen leaves.

Macartney Roses sometimes suffer when exposed to severe frost in the open borders of the flower-garden: they will therefore require the same protection as recommended for the *Noisette* roses in cold situations. *Maria Leonida* is a fine border rose, for, by pegging down its shoots as they are produced in summer, a few plants soon cover a bed, or clump, with a dense mass of

foliage and flowers, ornamenting the flower-garden from three to four months in summer and autumn: it also forms a very fine standard.

It requires the burning sun of Italy to make these roses produce their seed: yet, by perseverance and careful cultivation, this desirable end may be obtained. To raise a double variety of *Rosa Hardii* is, at any rate, worth attempting. A flued wall must be used to train the plants to; and in small gardens, where there is not such a convenience, a hollow wall might be built, about four or five feet in height and ten or twelve feet long, of two courses of four-inch brickwork, with a space between, into one end of which an Arnott's stove might be introduced, and a pipe carried in a straight line through to the opposite end (each end must of course be built up to keep in the hot air); this pipe would heat the air between the two courses of brickwork sufficiently for the purpose. A fire should be kept every night from the middle of May to the middle of July; and this treatment would possibly induce some of these roses to give their seed. *Rosa Hardii* would bloom freely if trained to a hot wall; and, if fertilised with the Double Yellow Briar, seed may perhaps be obtained. *Lucida*, with the Yellow China Rose, will also be an experiment worth trying. *Maria Leonida*, fertilised with the Tuscany Rose, might also give some

curious hybrids. This is all speculative; but such speculations are, unlike many others, exceedingly innocent and interesting.

ROSA MICROPHYLLA.

(THE SMALL-LEAVED ROSE.)

Rosa microphylla rubra, from which we have derived all our varieties of this pretty family, was introduced from the East in 1823. It is nearly allied to the Macartney, and is most probably a Chinese hybrid of that rose. The original imported plant bearing double flowers makes it appear more probable that it is a mere garden variety. I have received seed from Italy of this rose, and find that plants from it, to use a florist's term, sport amazingly, no two appearing alike.

From Italian seed we have *Alba odorata*, a vigorous-growing variety, partaking as much of the Macartney Rose in its habit as of *Rosa microphylla*; in fact, it is a complete hybrid. This is a good evergreen rose, producing an abundance of pale sulphur, or rather cream-coloured flowers: they are sweet-scented, but do not in general open freely. *Carnea*, or *Rosea*, is a pretty and remarkable rose, forming a neat little bush, nearly evergreen; its flowers are double, and of a beautifully

cupped shape. *Coccinea*, as in one or two instances which I have noticed, is named with a florist's licence: it is *not* scarlet, but a very pretty double rose, of a deep reddish-rose colour, with the same neatly shaped flowers as the last: to these may be added *Purpurea*, *Rubra variegata*, and *Violacea*, three varieties quite new; but, as they have not yet bloomed in this country, no opinion can be given of their merits.

With the exception of *Alba odorata*, these roses are not hardy enough to bear exposure in wet and cold soils: they will perhaps grow for a time, but seldom bloom well. A warm and dry elevated border will suit them admirably, protecting them with some spray, &c., as directed for *Noisette* roses: but to see these very curious roses bloom in perfection, bud them on short stems of the *Dog Rose*, and treat them exactly as recommended for the *Tea-scented Roses*; they will then bloom freely, either in pots or in the flower-borders, and form delightful little plants, quite unique in their characters and appearance.

A few of these may be planted against a hot wall, as recommended for the *Macartney Roses*; and, possibly, *Purpurea*, fertilised with a bright-coloured *China Rose*, as *Fabvier*, would give some curious varieties. The *Single Microphylla*, with *Athelin* or *Henri Barbet*, would perhaps give some original and beautiful hybrids. *Coccinea* might also be fertilised with the *Tuscany*. If

any of these roses can be made to produce seed, interesting and curious varieties must be the result.

PROPAGATION OF AUTUMNAL ROSES.

As with the Summer Roses, these may be propagated by layers, budding, grafting, and by cuttings; the latter mode is the only one requiring especial notice, as the other methods applied to Summer Roses are of equal use in propagating these. All the families in this division are propagated with great facility by cuttings; in fact, with China, Bourbon, and Tea Roses, it is the only eligible way of getting plants on their own roots. There are three seasons in which this operation may be performed with success, in spring, summer, and autumn.

For spring cuttings, it will be necessary to resort to the forcing-house in the month of March, when those roses that were commenced to be forced in January will be just shedding their first crop of flowers; these blooming shoots will then be ripe and, as a general rule, fit for immediate propagation, either for cuttings or buds. It must be borne in mind, that no shoots are mature till their blooming is past. The cuttings may be made with three joints or buds, from the lower end of which the leaf should be cut, leaving the others untouched; the cutting must then be in-

serted about one inch into a very small pot of light mould, or peat and sand, equal parts: with rare sorts two buds will do, or even one; in the latter case, the bud must have the leaf attached, and a small portion of wood below the bud; it must be inserted in the pot so that the bud is slightly covered with the mould. The pots should then be plunged in sawdust or old tan, into a gentle hot-bed, and kept perfectly close, sprinkled with tepid water every morning, and shaded from the sun. In about a fortnight they will have taken root, but they must not be removed from this close frame till they have made a shoot from one to two inches in length. They are then safe, and may be removed into another frame, still with gentle heat, and have air every day to harden them. In a week they will be fit to pot into larger pots, and they may then be removed into the greenhouse or cold frame as convenient, till required for planting out in the borders in April and May: the pots used for the above purpose are *very small*, $2\frac{1}{2}$ inches deep and $1\frac{1}{2}$ inch over at the top; if more convenient, three or five cuttings may be placed *round the side* of a larger sized pot, $3\frac{1}{2}$ inches deep by 3 inches over. This method saves some trouble, but the plants are apt to be checked when potted off; pots of the latter size must be filled one third with broken pieces of pots, on which the base of the cuttings should rest; the small pots require no drainage.

For summer cuttings in June and July, ripe shoots may be taken as above directed, planted in pots, and placed in a cold frame, kept close, and sprinkled every morning. These will root slowly, but surely; for autumnal cuttings any convenient and spare shoots may be made into cuttings, and planted under a hand-glass in a warm exposure, about the middle or end of September: these must have air in mild humid weather during the winter, and be gradually exposed to the air in April by tilting the light: by the end of April they will be fit for potting. All the autumnal roses will grow readily if the above methods are followed. The Damask Perpetuals only are slow in rooting, and are propagated with more difficulty.

BUDDING ROSES IN POTS.

The Blush Boursault makes the best stock for budding on; it strikes readily from cuttings planted in the autumn. My practice in budding on the Boursault is as follows:—The strongest shoots are selected early in July for layering; flower-pots of the size 48 are taken, and the aperture at the bottom is enlarged, so as to allow the end of the shoot to be passed through. After doing this the shoot is tongued; the pot is drawn up till the tongue is about in the centre; it is then filled with a mixture of rotten dung and

sand in equal parts, and well pressed down. The shoot may be budded at the time of layering or afterwards, accordingly as the buds are ready. *The shoots should be headed down at the time of budding* to within two eyes of where the bud is inserted.* The buds of all the Bourbon, Tea-scented, China, and Hybrid Autumnal Roses, will push immediately. These may be removed from the stools in August, potted into larger pots, and forced with great success the following spring.

DIRECTIONS FOR FORCING ROSES.

Very few years ago forced roses were one of the luxuries of gardening, and the matter was looked upon as a difficult operation, in which accomplished gardeners only were successful; but with modern varieties the difficulty has vanished, and every one may have roses, at least in February, with the most simple means.

A pit 10 or 12 feet long and 8 feet wide, just high enough to stand upright in, with a door at one end, and a sunken path in the centre, a raised bed on each side of the path, and an 18-inch Arnott's stove at the further end, opposite to the door, with a pipe leading into a small brick chim-

* This heading down at the time of budding, although commonly practised, cannot generally be recommended. If applied to the Dog Rose when budded early in June, small heads will at once be formed, but the constitution of the plant will be much weakened.

ney *outside* (a chimney is indispensable), will give great abundance of forced roses from February to the end of May. To ensure this a supply must be kept ready; so that, say twenty, may be placed in the forcing-pit about the middle of December, a like number in the middle of January, and the same about the middle of February; they must not be pruned till taken into the house, when each shoot should be cut back to two or three buds or eyes, the latter for the strong shoots. The fire should be lighted at seven in the morning, and suffered to burn out about the same hour in the evening, unless in frosty weather, when it must be kept burning till late at night, so as to exclude the frost; and for this purpose double mats should be placed on the lights. The thermometer should not, by *fire heat*, be higher in the day than 70° during December, January, and February; at night it may sink to 35° without injury. The temporary rise in a sunny day is of no consequence, but *no air must be admitted at such times, or the plants will exhaust themselves, and immediately shed their leaves*. When the sun begins to have power, and in sunny weather towards the end of February, the plants may be syringed every morning about 10 o'clock with tepid water, and smoked with tobacco at night on the least appearance of the aphid or green-fly.

To ensure a fine and full crop of flowers, the

plants should be established one year in pots, and plunged in tan or sawdust in an open exposed place, so that their shoots are well ripened: the pots must be often removed, or what is better, place the pots on slates to prevent their roots striking into the ground; but with the Hybrid and Damask Perpetuals, even if only potted in November previous, a very good crop of flowers may often be obtained, and a second crop better than the first; for the great advantage of forcing perpetual roses is, that after blooming in the greenhouse or drawing-room, their young shoots may be cut down to within two or three buds of their base, and the plants placed again in the forcing-house, and a second crop of flowers obtained. The same mode may be followed also with the Bourbon, China, and Tea-scented Roses; with the latter, indeed, a third crop may be often obtained.

Towards the end of March, when the second crop of flowers is coming on, the plants may be gradually inured to the air, by opening the sashes in mild weather. This will make them hardy and robust. Syringing should be practised every morning and evening; but when the flower buds are ready to open this must be confined to the stems of the plants and the pots, otherwise the flowers will be injured by the moisture; air must at first only be given about 12 in the day; care must be taken to remove the plants from the forcing-house to the green-house or drawing-room before

their blossoms expand; they may then be kept in beauty many days. I have not found the check which the plants receive by this sudden change of temperature at all detrimental. During their second growth the plants should be watered once a week with manured water*, and the surface of the pot occasionally stirred. Those that are forced with the greatest facility are worked roses: these seldom or never fail to give an abundant crop of flowers; stems from 6 inches to $1\frac{1}{2}$ and 2 feet are equally eligible; the latter form elegant plants, and I think generally grow with greater luxuriance than dwarfs. China and Tea-scented Roses on their own roots are more delicate, and require more care; still one crop of flowers may always be depended upon, even from them. Instead of forcing them for a second crop, it will be better to place them in the greenhouse; they will then bloom again finely in May. I find, from experience, that all the autumnal roses may be forced every year without any disadvantage: to ensure their well doing, they must be removed from the forcing-house early in June, the surface of the pots dressed with rotten manure, and plunged in the same, or leaves, or any light substance. Towards the end of September they should be carefully shifted, removing nearly all the earth

* Two pounds of guano to ten gallons of water forms the very best species of liquid manure: this should be stirred before it is used.

from their roots, into a compost of light loam and rotten dung, equal quantities (this is, on the whole, the very best compost for potted roses), watered, and again plunged till required for forcing: this shifting would be better performed in June, but, as the weather is then often hot and dry, roses worked on the Dog Rose are apt to suffer. Pots of the sizes called near London 24's and 16's* are the best sizes for strong plants of roses for forcing: when potted, the large and unyielding roots should be cut off close, so that the plants may stand in the centre of the pots, the fibrous and small roots merely tipped.

The treatment recommended for roses in a pit with Arnott's stove may be pursued with roses in a house with smoke-flues or hot-water pipes. Arnott's stove is recommended as an economical and eligible mode of heating, practised here to some extent with success for several years: on these stoves an iron pan, fitted to the top, should always be kept full of water. Roses may be forced slowly, but with perhaps greater certainty, by the uninitiated, by giving air freely and constantly in mild weather during the day, keeping the fire constantly burning during the same period as recommended when keeping them closely shut up.

* The respective sizes of these pots are, 24's, $7\frac{1}{2}$ inches deep, and 8 inches over, measuring across the top of the pot; 16's, $8\frac{1}{2}$ inches deep, 9 inches in diameter.

CULTIVATION OF ROSES IN POTS FOR
THE GREENHOUSE.

For this purpose a selection should be made of some of the finer varieties of China and Tea-scented Roses on their own roots; it may also include such Bourbons as the Queen, Acidalie, Crimson Globe, Grand Capitaine, Madame Nerard, Madame Margat, Proserpine and Phoenix, and Noisette's Miss Glegg, Lelieur, Ne Plus Ultra, and Victorieuse. These are all of dwarfish and compact habit, and free bloomers. Presuming these roses to be procured in the spring or summer, in the usual small pots they are generally grown in by the cultivators for sale, they should be immediately potted into pots called 32's, (these are generally 7 inches deep, by 6 over at the surface,) in a compost of turfy sandy loam and well-rotted manure, equal quantities, or leaf-mould; if the latter is used two thirds to one third of loam will be as well; this compost must not be sifted, but merely chopped into pieces as large as a walnut: the fine mould, which will, as a matter of course, result from this chopping, must not be separated from the pieces of turf, but all must be well mixed with the manure or leaf-mould. The pots should then be filled about one third with broken pieces of crockery or potsherds, the plants taken from the small pots, and the balls of earth gently pressed so as to loosen them; place each plant in the cen-

tre of the large pot; press the earth well round them; give a soaking of water, and plunge them in the sawdust or tan in some sunny exposed place where they may have all the sun our fickle climate will give them. They may remain here till early in October, when they should be removed into the greenhouse, but a fortnight before taking them into their winter quarters, lift every pot, and place it on the surface of the bed in which they have been plunged: their roots then become hardened, and bear the dry warm air of the greenhouse without injury: they should at this time also be pruned into any handsome desirable shape, (a compact bush is perhaps the prettiest,) or, if tall plants are required, the long shoots may be fastened to a neat painted stick. Roses thus treated will come into bloom in the greenhouse in April, and continue one of its brightest ornaments till the beginning of June; they should then be repotted into larger pots if large plants are wished for, and again plunged in the open air till the autumn: care must be taken to place the pots on slates, to prevent their roots getting through the bottoms of the pots. If compact and pretty little plants are required the same pots may be used, merely reducing the roots, so that the pot will hold a small quantity of compost for the plant to feed upon. A most excellent compost for potted roses may be made as follows:—Pare some turf from a loamy pasture; the parings must not

be more than one inch in thickness; bake them in an oven about twelve hours when the temperature is equal to that just after it has been used for baking bread; they must not be burned*: this, chopped as before directed, with equal parts of rotten manure, forms one of the very finest of composts. The plants must be looked to carefully in spring, and whenever infested by the aphid, or green-fly, tobacco-smoke must be applied: extraordinary luxuriance of growth may be given by watering them once a week with guano-water.

A season may be saved in the growth of these roses if plants in larger pots than those they are usually sold in are purchased: if these are procured in the autumn or winter, they may be placed in the greenhouse at once with a certainty of succeeding.

CULTURE OF HARDY ROSES IN POTS FOR EXHIBITION.

The most elegant pot roses for exhibition may be selected from those families recommended for greenhouse culture; but as it is now the fashion for Horticultural Societies to offer prizes for "roses in pots," it becomes my duty to offer a few observations on growing hardy varieties of roses in

* I have used, with much success, turf roasted on a sheet of iron (placed in temporary brickwork) under which a moderate fire has been kept: about one hour's roasting is sufficient. This chars the turfy side, and acts most beneficially.

pots, so as to form very large plants. I must here caution the reader, that occasional disappointment must be expected in growing them in pots for exhibition, as roses, like facts, are stubborn things, and will often, in summer, bloom just whenever it pleases them to do so, not being easily retarded or forced: now, as days of exhibition are usually fixed before it is known whether we are to have an early or a late season, it is frequently a complete lottery whether any particular plants of roses will be in bloom or not. I have sometimes known on days fixed for the exhibition at Chiswick, that I have looked over fifty plants of one sort before I could find three or four perfect flowers. Those roses recommended for greenhouse culture, from their producing a succession of bloom, must be most relied upon by the exhibitor; but if by a lucky chance a collection of moss roses, or some of the finer kinds of French and Hybrid Bourbon roses, could be enticed to show themselves in all their gay attire on *the* day, they would make the greenhouse roses “hide their diminished heads.”

To form a collection of hardy roses in pots, the very best should be selected from the following families: Moss, Provence, Hybrid Provence, French, Damask Roses alba, Perpetual, and Hybrid Perpetual. Some good lists have been given in the *Gardener's Chronicle*; but these contain too many varieties with flaccid petals, which will not bear

removal when in bloom. Now for hardy pot roses, except Moss Roses, in which the choice is limited, only those with very double flowers, and stiff, waxy petals, should be selected. The following will not disappoint the amateur. I ought here to mention, that it is better to pot two, or three, or four of any one good sort, rather than have a greater variety of second-rate roses.

The above are all of first-rate quality ; their

* The Hypocrate of many catalogues is a Hybrid Bourbon, a very inferior rose to the above.

flowers are very double, and their petals thick, and not liable to fade quickly. About the end of October worked plants should be selected on very straight stems, not more than from six to eight inches in height. *Care must be taken that their roots are so formed that each plant may be placed in the centre of the pot:* unless this is strictly attended to, they will make but a poor appearance, as might be seen in some of those exhibited at the horticultural shows in the season of 1842. If any of the large roots interfere with the position of the plant in the pot, they may be much shortened, merely tipping the small roots and fibres.

Stems from six to eight inches may be taken generally as the most eligible height; but, to form plants for the back row, varieties of the following families may be on stems one foot to eighteen inches; they will increase the effect; viz. Hybrid China, Hybrid Bourbon, and Hybrid Perpetuals. Many of these will form, when in full bloom, fine pendulous heads. When plants of the above description have been selected, they may be potted in a compost of nice turfy loam and rotten dung, equal parts; the loam should, if possible, be more rich and adhesive than that recommended for the plants under greenhouse culture; the pots used should be sixteens, and, if some of the plants are very strong, even a size larger, called twelves, may be used; these should then be plunged, in the open air on the surface of the soil, in sawdust,

rotten leaves, or old tan, which should be four inches deep on the surface of the mould in the pots, care being taken to place the bottom of each pot on a slate, for reasons before given. I recommend the pots to be placed on the surface, rather than to be plunged in the soil, as they then receive the full influence of the sun to their roots. Towards the end of February each plant must be pruned to within six or eight buds of the base of the strong shoots, and to within two or three buds of those that are more weak: it will be as well, however, if the plants have very long shoots, to shorten these one third at the time of potting, as this prevents their being racked by the high winds of November, as before stated in this work. Autumnal pruning will tend to give an earlier bloom; therefore, one half of the plants may be finally pruned when potted, if this is the object sought for; the remainder in March, or even late as April; indeed, this will give the exhibitor a chance of having *some* plants ready on the important day. In May, if the weather is hot and dry, the plants, although plunged and apparently moist, will require water daily; and once a week a regular soaking with guano water will ensure a most vigorous growth, and defy all attacks of the aphid or any other little pest, the grub excepted, which must be carefully sought for in all those young leaves on the flower stems which appear glued together.

The plants will require shifting annually; in general, pots of the same size will do, shaking all the mould clean from their roots, and giving them a fresh and rich compost. The middle or end of October is the best period for this annual shifting. I have before said it is most difficult to retard or force into bloom roses grown in pots in the open air; however, removal into the greenhouse for a week or ten days, to force them if required, may be tried, to retard them; the method employed by the courtier, in the days of Elizabeth, to save his cherries for his queen, may be essayed, viz. stretch a piece of canvas on hoops over the plants, and keep it constantly wet, by sprinkling it with water.

I wish success to all those who intend to exhibit roses in pots, but must again caution them not to be soured by one or two disappointments, as the sun will shine and hasten, and clouds will come and retard, and possibly blight the hope of being able to exhibit twelve or twenty roses on some appointed day.

PLANTING.

With the exception of the Perpetual Roses, which, in planting, can have the same treatment as recommended for the hard-wooded roses of the Summer Rose Garden, the transplanting of all

the Autumnal Roses ought, in cold and wet situations, to be deferred till Spring; and the beginning of April will, in ordinary seasons, be found the most eligible time for this operation. A few exceptions may be made; as *Madame Desprez*, *Dubourg*, *Splendens*, *Triomphe de Planteur*, *Bouquet de Flore*, and some others, among the *Bourbon* Roses, are so hardy that our most severe winters do not injure them; but the varieties of *Noisette*, *Chinese*, *Tea-scented*, *Microphylla*, and *Macartney* Roses, are very apt to receive injury from the frosts of winter, and the cutting winds of March, if the plants are not well established.

LIST No. 1.

AN ABRIDGED LIST OF ROSES,

Adapted for Amateurs possessing small Gardens,
or for those beginning to form a Collection;
selected so as to give the leading Variations of
Colour.

Provence Roses.

Crested.
Duchesse.
Dutch.
Grande Agathe.

BOTANICAL WORKS

PRINTED FOR

LONGMAN, BROWN, GREEN, AND LONGMANS.

1.

A SCRIPTURE HERBAL. With upwards of 120 Wood Engravings. By Lady CALLCOTT. Square crown 8vo. 1l. 5s. cloth.

2.

THE BRITISH FLORA, in 2 vols. Vol. I., comprising Phænogamous or Flowering Plants, and the Ferns. By Sir WILLIAM JACKSON HOOKER, K.H., LL.D., F.R.A. and L.S. &c. &c. Fifth Edition, with Additions and Corrections; and 173 Figures illustrative of the Umbelliferous Plants, the Composite Plants, the Grasses, and the Ferns. 8vo., with 12 Plates, 14s. plain; with the plates coloured, 24s. cloth.

Vol. II., in Two Parts, comprising the Cryptogamia and Fungi, completing the British Flora, and forming Vol. 5. Parts 1 and 2, of "Smith's English Flora," 24s. boards.

3.

THE ENGLISH FLORA. By Sir JAMES EDWARD SMITH, M.D., F.R.S., late President of the Linnæan Society, &c. 6 vols. 8vo. 3l. 12s. boards.

Contents: — Vols. I. to IV. the Flowering Plants and the Ferns, 2l. 8s.

Vol. V. Part 1. 12s. — Cryptogamia; comprising the Mosses, Hepaticæ, Lichens, Characæ, and Algæ. By Sir W. J. HOOKER.

Vol. V. Part 2. 12s. — The Fungi; completing the work, by Sir W. J. HOOKER, and the Rev. M. J. BERKELEY, F.L.S. &c.

4.

AN INTRODUCTION to the STUDY of BOTANY. By Sir J. E. SMITH, late President of the Linnæan Society. 7th Edition, corrected; in which the object of Smith's "Grammar of Botany" is combined with that of the "Introduction." By Sir WILLIAM JACKSON HOOKER, K.H., LL.D., &c. 8vo. 36 Steel Plates, 16s. cloth; with the Plates coloured, 2l. 12s. 6d. cloth.

5.

INTRODUCTION to BOTANY. By Prof. J. LINDLEY, Ph.D., F.R.S., L.S., &c. 3d Edition, with Corrections and considerable Additions, 8vo. with Six Plates and numerous Woodcuts, 18s. cloth.

6.

A NATURAL SYSTEM of BOTANY; or, a Systematic View of the Organization, Natural Affinities, and Geographical Distribution of the whole Vegetable Kingdom; together with the uses of the most important species in Medicine, the Arts, and Rural or Domestic Economy. By JOHN LINDLEY, Ph.D., F.R.S., L.S., &c. 2d Edition, with numerous additions and corrections, and a complete List of Genera, with their synonyms. 8vo. 18s. cloth.

7.

THE PRINCIPLES of DESCRIPTIVE and PHYSIOLOGICAL BOTANY. By J. S. HENSLOW, M.A., F.L.S. &c. Fcp. 8vo. with Vignette Title, and nearly 70 Woodcuts, 6s. cloth.

8.

AN ENCYCLOPÆDIA of GARDENING; presenting, in one systematic view, the History and Present State of Gardening in all Countries, and its Theory and Practice in Great Britain: with the Management of the Kitchen-Garden, the Flower-Garden, Laying-out Grounds, &c. By J. C. LONDON, F.L.S. &c. A New Edition, enlarged and much improved, 8vo. with nearly 1000 Engravings on Wood, 50s. cloth.

9.

THE THEORY of HORTICULTURE; or, an Attempt to explain the Principal Operations of Gardening upon Physiological Principles. By JOHN LINDLEY, Ph.D., F.R.S. 8vo Illustrations on Wood. 12s. cloth.

10.

AN ENCYCLOPÆDIA of PLANTS; including all the Plants which are now found in, or have been introduced into, Great Britain; giving their Natural History, accompanied by such descriptions, engraved figures, and elementary details, as may enable a beginner, who is a mere English reader, to discover the name of every Plant which he may find in flower, and acquire all the information respecting it which is useful and interesting. The Specific Characters by an Eminent Botanist; the Drawings by J. D. C. Sowerby, F.L.S. A New Edition, with a New Supplement, comprising every desirable particular respecting all the Plants originated in, or introduced into, Britain between the first publication of the work, in 1829, and January 1840: with a new General Index to the whole work. Edited by J. C. LONDON, prepared by W. H. Baxter, Jun., and revised by George Don, F.L.S.; and 800 new Figures of Plants on Wood, from Drawings, by J. D. C. Sowerby, F.L.S. 8vo. with nearly 10,000 Wood Engravings, 3l. 13s. 6d.

The New Supplement, *separately*, 15s. cloth.

October 2, 1843.

CATALOGUE.

ETC. ETC.

ADAM.—THE GEM OF THE PEAK;

Or, Matlock Bath and its Vicinity: an Account of Derby; a Tour from Derby to Matlock, Excursion to Chatsworth, Haddon, Monsal Dale, etc. etc.; a Review of the Geology of Derbyshire, and the Flora of the High and Low Peak. By W. Adam. 3d Edition 12mo. with Maps and Engravings, 6s. cloth.

ADDISON.—THE KNIGHTS TEMPLARS.

By C. G. Addison, of the Inner Temple. 2d Edition, enlarged, 1 vol. square crown 8vo. with Illustrations, 18s. cloth.

ADDISON.—THE TEMPLE CHURCH IN LONDON:

Its History and Antiquities. By C. G. Addison, Esq., of the Inner Temple, author of "The History of the Knights Templars." Square crown 8vo. with 6 Plates, 5s. cloth.

ADDISON.—A FULL AND COMPLETE GUIDE, HISTORICAL AND DESCRIPTIVE, TO THE TEMPLE CHURCH. (From Mr. Addison's "History of the Temple Church.") Square crown 8vo. 1s. sewed.

AIKIN.—THE LIFE OF JOSEPH ADDISON.

Illustrated by many of his Letters and Private Papers never before published. By Lury Aikin. 2 vols. post 8vo. with Portrait from Sir Godfrey Kneller's Picture. 18s. cloth.

"Miss Aikin has not left a stone unturned, that her monument to one of our most polished writers and complete minds may be fair, upright, and symmetrical. Her book contains the first complete life of Addison ever put forth. As a literary biography it is a model; and its pages are besides enriched by many hitherto unpublished letters of Addison."—Athenæum.

ALLAN.—A PICTORIAL TOUR IN THE MEDITERRANEAN;

Comprising Malta, Dalmatia, Turkey, Asia Minor, Grecian Archipelago, Egypt, Nubia, Greece, Ionian Islands, Sicily, Italy, and Spain. By J. H. Allan, Member of the Athenian Archaeological Society, and of the Egyptian Society of Cairo. Imp. 4to. containing upwards of 40 Lithographed Drawings, and 70 Wood Engravings, 3l. 3s. cloth.—*Nearly ready.*

BAILLIE'S (JOANNA) NEW DRAMAS.

3 vols. 8vo. 1l. 16s. boards.

BAILLIE'S (JOANNA) PLAYS ON THE PASSIONS.

3 vols. 8vo. 1l. 11s. 6d. boards.

BAINBRIDGE.—THE FLY-FISHER'S GUIDE.

Illustrated by coloured Plates, representing upwards of 40 of the most useful Flies, accurately copied from Nature. By G. C. Bainbridge. 4th edition, 8vo. 10s. 6d. cloth.

BAKEWELL.—AN INTRODUCTION TO GEOLOGY.

Intended to convey Practical Knowledge of the Science, and comprising the most important recent Discoveries; with Explanations of the Facts and Phenomena which serve to confirm or invalidate various Geological Theories. By Robert Bakewell. Fifth Edition, considerably enlarged, 8vo. with numerous Plates and Woodcuts, 21s. cloth.

BAYLDON.—ART OF VALUING RENTS AND TILLAGES,

And the Tenant's Right of Entering and Quitting Farms, explained by several Specimens of Valuations; and Remarks on the Cultivation pursued on Soils in different Situations. Adapted to the Use of Landlords, Land-Agents, Appraisers, Farmers, and Tenants. 5th Edition, re-written and Enlarged, by John Donaldson. With a Chapter on the Tithe-Commutation Rent-charge, by a Gentleman of much experience on the Tithe Commission. 8vo. 10s. 6d. cloth.

BAYLDON.—TREATISE ON THE VALUATION OF PROPERTY FOR

THE POOR'S RATE; showing the Method of Rating Lands, Buildings, Tithes, Mines, Woods, Navigable Rivers and Canals, and Personal Property; with an Abstract of the Poor Laws relating to Rates and Appeals. By J. S. Bayldon, author of "Rents and Tillages." 1 vol 8vo. 7s. 6d. boards.

BEDFORD CORRESPONDENCE.—CORRESPONDENCE OF JOHN, FOURTH DUKE OF BEDFORD, selected from the Originals at Woburn Abbey: with Introductions by Lord John Russell. 8vo. vol. 1 (1742-48), 18s. cloth; vol. 2 (1749-60), 15s. cloth.

"The second volume of this publication includes a correspondence having relation to the period from the Peace of Aix-la-Chapelle to the death of George II. Its most remarkable portion bears upon an important question on which there exist some differences of opinion at the present time, viz. the intrigues which led to the junction of the Duke of Newcastle and Pitt, in 1757. The letters respecting the state of Ireland under the Viceroyalty of the Duke of Bedford, also here, are not a little interesting."—Morning Herald.

* * * Vol. III. to complete the work, is in preparation.

BELL.—LIVES OF THE MOST EMINENT ENGLISH POETS.

By Robert Bell, Esq. 2 vols. foolscap 8vo. with Vignette Titles, 12s. cloth.

BELL.—THE HISTORY OF RUSSIA,

From the Earliest Period to the Treaty of Tilsit. By Robert Bell, Esq. 3 vols. foolscap 8vo. with Vignette Titles, 18s. cloth.

BELLAMY.—THE HOLY BIBLE,

Newly Translated from the Original Hebrew only. By J. Bellamy. 4to. Parts 1 to 8.

BIOGRAPHICAL DICTIONARY

Of the Society for the Diffusion of Useful Knowledge. To be continued Quarterly, in Half-volumes. Vol. 1, Part 1—Aa to Agathoclea, 8vo. 12s. cloth.

Vol. 2, Part 2, completing Vol. 1.—Agathocles to Alexander III. 8vo. 12s. cloth.

Vol. 2, Part 1—Alexander of Seleucia to Amelion, 8vo. 12s. cloth.

Vol. 2, Part 2, completing Vol. 2—Ameinocles to Antelmi (Leonce), 8vo. 12s. cl.

Vol. 3, Part 1—Antelmi to Aristophanes. 8vo. 12s. cloth.

* * * Publishing Quarterly.—The work will probably not exceed Thirty Volumes.

"This work proceeds in a satisfactory manner. The number of new names is very considerable; and in the articles which we have read, and of which we have been able to form an opinion, we have sometimes gained new information, and at others have seen the errors of former authorities satisfactorily corrected."—British Magazine.

BISCHOFF.—PHYSICAL, CHEMICAL, AND GEOLOGICAL RESEARCHES on the Internal Heat of the Globe. By Gustav Bischoff, Ph.D. Professor of Chemistry in the University of Bonn. 2 vols. Vol. I. 8vo. Plates and Woodcuts, 10s. boards.

BLACK'S PICTURESQUE TOURIST,

And Road Book of England and Wales: with a general Travelling Map, Charts of Roads, Railroads, and interesting Localities, and engraved Views of the Scenery. Fcp. 8vo. 10s. 6d. cl.

BLAINE.—AN ENCYCLOPÆDIA OF RURAL SPORTS;

Or, a complete Account, Historical, Practical, and Descriptive, of Hunting, Shooting, Fishing, Racing, and other Field Sports and Athletic Amusements of the present day. By Delabere P. Blaine, Esq., author of "Outlines of the Veterinary Art," "Canine Pathology," etc. etc. With nearly 600 Engravings on Wood, by R. Branston, from Drawings by Alken, T. Landseer, Dicks, etc. 1 thick vol. 8vo. pp. 1256, 2l. 10s. bound in fancy cloth.

BLAIR'S CHRONOLOGICAL AND HISTORICAL TABLES,

From the Creation to the present Time. A New Edition, carefully corrected, enlarged, and brought down to the present time; and printed in a convenient form. Under the revision of Sir Henry Ellis, K.H. Principal Librarian of the British Museum. 1 vol. royal 8vo.

BLOOMFIELD.—HISTORY OF THE PELOPONNESIAN WAR.

By Thucydides. Newly Translated into English, and accompanied with very copious Notes, Philological and Explanatory, Historical and Geographical. By the Rev. S. T. Bloomfield, D.D. F.S.A. 3 vols. 8vo. with Maps and Plates, 2l. 5s. boards.

BLOOMFIELD.—THE GREEK TESTAMENT:

With copious English Notes, Critical, Philological, and Explanatory. By the Rev. S. T. Bloomfield, D.D. F.S.A. 3d Edit. Improved, 2 vols. 8vo. with a Map of Palestine, 40s. cloth.

BLOOMFIELD.—COLLEGE AND SCHOOL GREEK TESTAMENT;

With English Notes. By the Rev. S. T. Bloomfield, D.D. Third Edition, greatly enlarged and very considerably improved, accompanied with a New Map of Syria and Palestine, adapted to the New Testament and Josephus, and an Index of Greek Words and Phrases explained in the Notes. 12mo. 10s. 6d. cloth.

BLOOMFIELD.—GREEK AND ENGLISH LEXICON TO THE NEW TESTAMENT: especially adapted to the use of Colleges, and the Higher Classes in Public Schools; but also intended as a convenient Manual for Biblical Students in general. By Dr. Bloomfield. Foolscap 8vo. 9s. cloth.

BOSWORTH.—A DICTIONARY OF THE ANGLO-SAXON LANGUAGE;

Containing the Accentuation, the Grammatical Inflections, the Irregular Words referred to their Themes, the Parallel Terms from other Gothic Languages, the Meaning of the Anglo-Saxon in English and Latin, and copious English and Latin Indexes, serving as a Dictionary of English and Anglo-Saxon, as well as of Latin and Anglo-Saxon. With a Preface on the Origin and Connexion of the German Tongues, a Map of Languages, and the Essentials of Anglo-Saxon Grammar. By the Rev. J. Bosworth, LL.D. Dr. Phil. of Leyden, etc. Royal 8vo. pp. 766, 2l. 2s. boards. Cambridge, 1838.

BOY'S OWN BOOK (THE):

A Complete Encyclopedia of all the Diversions, Athletic, Scientific, and Recreative, of Boyhood and Youth. 19th Edition, square 12mo., with many Engravings on Wood, 8s. 6d. boards.

BRANDE.—A DICTIONARY OF SCIENCE, LITERATURE, AND ART;

Comprising the History, Description, and Scientific Principles of every Branch of Human Knowledge; with the Derivation and Definition of all the Terms in general use. Edited by W. T. Brande, F.R.S.L. and E.; assisted by Joseph Cauvin, Esq. The various departments are by Gentlemen of eminence in each. 1 very thick vol. 8vo. pp. 1352. Illustrated by Wood-engravings, 3l. bound in cloth. London, 1842.

BRAY.—THE PHILOSOPHY OF NECESSITY;

Or, the Law of Consequences as applicable to Mental, Moral, and Social Science. By Charles Bray. 2 vols. 8vo. 15s. cloth.

BREWSTER.—TREATISE ON OPTICS.

By Sir David Brewster, LL.D. F.R.S. etc. New Edition. 1 vol. foolscap 8vo. Vignette Title, and 176 Woodcuts, 6s. cloth.

BRITTON.—THE ORIGINAL PICTURE OF LONDON:

With a Description of its Environs. Re-edited and mostly re-written, by J. Britton, F.S.A. etc. 28th Edition, with upwards of 100 Views of Public Buildings, Plan of the Streets, and Two Maps, 18mo. 9s. neatly bound; with the Maps only, 6s. bound.

BULL.—HINTS TO MOTHERS,

For the Management of Health during the Period of Pregnancy and in the Lying-in Room; with an Exposure of Popular Errors in connexion with those subjects. By Thomas Bull, M.D. Physician Accoucheur to the Finsbury Midwifery Institution, etc. etc. 3d Edition. 1 vol. foolscap 8vo. enlarged, pp. 336. 7s. cloth. London, 1841.

BULL.—THE MATERNAL MANAGEMENT OF CHILDREN,

In HEALTH and DISEASE. By Thomas Bull, M.D. Foolscap 8vo. 7s. cloth.

"An excellent guide, and deserves to be generally known."

Johnson's Medico Chirurgical Review, July, 1843.

BURNS.—THE PRINCIPLES OF CHRISTIAN PHILOSOPHY;

Containing the Doctrines, Duties, Admonitions, and Consolations of the Christian Religion. By John Burns, M.D. F.R.S. 5th Edition, 12mo. 7s. boards.

CONTENTS.

Man is created for a Future State of Happiness; on the Means by which a Future State of Happiness is procured; of what is required of Man that he may obtain a Future State of Happiness; of the Nature of the Future State of Happiness; of the Preparation for

the Future State of Happiness; of Personal Duties; of Relative Duties; of the Duties Men owe to God; of the Admonitions and Consolations afforded by the Christian Religion.

BURDER.—ORIENTAL CUSTOMS,

Applied to the Illustration of the Sacred Scriptures. By Samuel Burder, A.M. 3d Edition, with additions, foolscap 8vo. 8s. 6d. cloth.

CONTENTS.

Houses and Tents—Marriage—Children—Servants—Food and Drink—Dress and Clothing—Presents and Visiting—Amusements—Books and Letters—Hospitality—Travelling—Respect and Honour—Agriculture—Cattle

and Beasts—Birds, Insects, and Reptiles—Fruit and Wine—Kings and Government—War—Punishments—Religion—Time and Seasons—Medicine—Funerals, etc.

BUTLER.—SKETCH OF ANCIENT AND MODERN GEOGRAPHY.

By Samuel Butler, D.D., late Lord Bishop of Lichfield and Coventry; and formerly Head Master of Shrewsbury School. New Edition, revised by his Son, 8vo. 9s. boards.

The present edition has been carefully revised by the author's son, and such alterations introduced as continually progressive discoveries and the latest information rendered necessary. Recent Travels have been constantly consulted where any doubt or difficulty seemed to require it; and some additional matter has been added, both in the ancient and modern part.

BUTLER.—ATLAS OF MODERN GEOGRAPHY.

By the late Dr. Butler. New Edition; consisting of Twenty-three coloured Maps, from a New Set of Plates. 8vo. with Index, 12s. half-bound.

BUTLER.—ATLAS OF ANCIENT GEOGRAPHY;

Consisting of Twenty-three coloured Maps. With Index. By the late Dr. Butler. New Edition. 8vo. 12s. half-bound.

. The above two Atlases may be had, in One Volume, 4to. 24s. half-bound.

CALLCOTT.—A SCRIPTURE HERBAL:

With upwards of 120 Wood Engravings. By Lady Callcott. Square crown 8vo., pp. 568, 11. 5s. cloth.

"The last two years of her life were devoted to drawing the specimens of the plants, and collecting the best works on botany, so as to furnish materials for her last book—'The Scripture Herbal'—the design and character of which is as creditable to her philanthropy as its origin is honourable to the extent of her Biblical studies. The easy gracefulness of its style, and its elegant embellishments, may lead many an inhabitant of the drawing-room or boudoir to 'look from Nature up to Nature's God,' to study his 'unwritten laws' in the natural world in connexion with the 'written law of revelation.'"—From a Memoir of Lady Callcott, in the Annual Biography for 1842.

CATLOW.—POPULAR CONCHOLOGY;

Or, the Shell Cabinet Arranged: being an Introduction to the modern System of Conchology; with a sketch of the Natural History of the Animals, an account of the Formation of the Shells, and a complete Descriptive List of the Families and Genera. By Agnes Catlow. 1 vol. fcap. 8vo. with 312 Woodcuts, 10s. 6d. cloth.

CAVENDISH'S (SIR H.) DEBATES OF THE HOUSE OF COMMONS,

During the Thirteenth Parliament of Great Britain, commonly called the Unreported Parliament. To which are appended, Illustrations of the Parliamentary History of the Reign of George III., consisting of Unpublished Letters, Private Journals, Memoirs, etc. Drawn up from the Original MSS., by J. Wright, Esq., Editor of the Parliamentary History of England. In 4 vols. royal 8vo. Vol. 1 is now ready, 25s. cloth. The work is also published in Parts, 6s. each, of which Six are now published.

"These Reports (1768–1774) constitute a valuable addition to Hansard's Debates, and contain much curious matter—inter alia, upwards of one hundred new speeches of Burke; they, in fact, go far to fill up a hitherto hopeless gap in our Parliamentary history—and the publication, with its important appendices, does great honour to the skill and industry of the discoverer and editor."—Quarterly Review, No. 140, Sept. 1842—note, p. 290.

CHALENOR.—POETICAL REMAINS OF MARY CHALENOR.

Fcp. 8vo. 4s. cloth.

CHALENOR. — WALTER GRAY,

A Ballad, and other Poems; including the Poetical Remains of Mary Chalenor. 2d Edition, with Additions, fcp. 8vo. 6s. cloth.

"The poems are sweetly natural; and, though on topics often sung, breathe a tenderness and melancholy which are at once soothing and consolatory."—Literary Gazette.

CHINA.—THE LAST YEAR IN CHINA,

To the Peace of Nanking: as sketched in Letters to his Friends, by a Field Officer actively employed in that Country. With a few concluding Remarks on our Past and Future Policy in China. 2d Edition, revised. Foolscep 8vo. with Map, 7s. cloth.

CHINESE NOVEL. — RAMBLES OF THE EMPEROR CHING TIH IN

KEANG NAN: a Chinese Tale. Translated by Tkin Shen; with a Preface by James Legge, D.D. 2 vols. post 8vo. 21s. cloth.

"These rambles of the Haroun Alraschid of the Celestial Empire give a very curious, and, at the present moment, a peculiarly interesting view of Chinese opinions, usages, and institutions."—Tait's Magazine.

CLAVERS.—FOREST LIFE.

By Mary Clavers, an Actual Settler; author of "A New Home, Who'll Follow?" 2 vols. fcap. 8vo. pp. 642, 12s. cloth.

COLTON.—LACON; OR, MANY THINGS IN FEW WORDS.

By the Rev. C. C. Colton. New Edition, 8vo. 12s. cloth.

CONVERSATIONS ON BOTANY.

9th Edition, improved, pp. 302, foolscap 8vo. with 22 Plates, 7s. 6d. cloth; with the Plates coloured, 12s. cloth.

The object of this work is to enable children and young persons to acquire a knowledge of the vegetable productions of their native country, by introducing to them, in a familiar manner, the principles of the Linnæan System of Botany. For this purpose, the arrangement of Linnæus is briefly explained; a native plant of each class, with a few exceptions, is examined, and illustrated by an engraving; and a short account is added of some of the principal foreign species.

CONVERSATIONS ON MINERALOGY.

With Plates, engraved by Mr. and Mrs. Lowry, from Original Drawings. 3d Edition, enlarged. 2 vols. 12mo. 14s. cloth.

COOLEY.—THE HISTORY OF MARITIME AND INLAND DISCOVERY.

By W. D. Cooley, Esq. 3 vols. foolscap 8vo. with Vignette Titles, 18s. cloth.

COPLAND.—A DICTIONARY OF PRACTICAL MEDICINE;

Comprising General Pathology, the Nature and Treatment of Diseases, Morbid Structures, and the Disorders especially incidental to Climates, to Sex, and to the different Epochs of Life, with numerous approved Formulæ of the Medicines recommended. By James Copland, M.D., Consulting Physician to Queen Charlotte's Lying-in Hospital; Senior Physician to the Royal Infirmary for Children; Member of the Royal College of Physicians, London; of the Medical and Chirurgical Societies of London and Berlin, etc. Publishing in Parts, of which Eight have appeared.

CROCKER—ELEMENTS OF LAND SURVEYING.

Fifth Edition, corrected throughout, and considerably improved and modernized, by T. G. Bunt, Land Surveyor, Bristol. To which are added, TABLES OF SIX-FIGURE LOGARITHMS, etc., superintended by Richard Farley, of the Nautical Almanac Establishment. 1 vol. post 8vo. 12s. cloth.

*. * *The work throughout is entirely revised, and much new matter has been added; there are new chapters, containing very full and minute Directions relating to the modern Practice of Surveying both with and without the aid of angular instruments. The method of Plotting Estates, and casting or computing their Areas, are described, etc. etc. The chapter on Levelling also is new.*

CROWE.—THE HISTORY OF FRANCE,

From the Earliest Period to the Abdication of Napoleon. By E. E. Crowe, Esq. 3 vols. foolscap 8vo. with Vignette Titles, 18s. cloth.

DAVY (SIR HUMPHRY).—AGRICULTURAL CHEMISTRY:

With Notes by Dr. John Davy. 6th Edition, 8vo. with 10 Plates, 15s. cloth.

CONTENTS:

Introduction; The General Powers of Matter which Influence Vegetation: the Organization of Plants; Soils; Nature and Constitution of the Atmosphere, and its Influence on Vegetables; Manures of Vegetable and

Animal Origin; Manures of Mineral Origin, or Fossil Manures; Improvement of Lands by Burning; Experiments on the Nutritive Qualities of different Grasses, etc.

DE CUSTINE.—THE EMPIRE OF THE CZAR,

Or, Observations on the Social, Political, and Religious State of Russia, and its Prospects, made during a Journey through that Empire. By the Marquis De Custine. Translated from the French. 3 vols. post 8vo. 31s. 6d. cloth.

"M. De Custine has exhibited some new views on Russia in a striking and attractive way. To the Frenchman's sparkling vivacity of manner he adds his skill in seizing upon the incidents of action, the features of character, or the points of things, and presenting them with an attractive or imposing effect. The aristocratical opinions of M. De Custine also impart a character to his sentiments; as his politeness refines his taste and gives an air of decorum to his morals, without modifying his French confidence."—Spectator.

"A remarkable book, full of lively, curious, extractable matter. The Marquis is a clever, spirited writer; and his point and brilliancy are kept, his happy hits given, and his vehement indignation in no way compromised, in this excellent translation."—Examiner.

DE LA BECHE.—REPORT ON THE GEOLOGY OF CORNWALL, DEVON, AND WESTSOMERSET.

By Henry T. De la Beche, F.R.S. etc., Director of the Ordnance Geological Survey. Published by Order of the Lords Commissioners of H. M. Treasury. 8vo. with Maps, Woodcuts, and 12 large Plates, 14s. cloth.

DE MORGAN.—AN ESSAY ON PROBABILITIES,

And on their Application to Life Contingencies and Insurance Offices. By Aug. De Morgan, of Trinity College, Cambridge. 1 vol. foolscap 8vo. with Vignette Title, 6s. cloth.

DENDY.—THE PHILOSOPHY OF MYSTERY.

By W. C. Dendy. 1 vol. 8vo. 12s. cloth.

DOCTOR (THE), ETC.

5 vols. post 8vo. 2l. 12s. 6d. cloth.

"Admirably as the mystery of the 'Doctor' has been preserved up to the present moment, there is no longer any reason for affecting secrecy on the subject. The author is Robert Southey; he acknowledged the fact shortly before his last illness to his most confidential friend, an M.P. of high character. In a private letter from Mrs. Southey, dated February 27, 1843, she not only states the fact, but adds that the greater part of a sixth volume had gone through the press, and that Southey looked forward to the pleasure of drawing her into it as a contributor; giving her full authority to affirm that her husband is the author."

Robert Bell, Esq., in The Story Teller, No. 1.

DODDRIDGE.—THE FAMILY EXPOSITOR;

Or, a Paraphrase and Version of the New Testament: with Critical Notes, and a Practical Improvement of each Section. By P. Doddridge, D.D. To which is prefixed, a Life of the Author, by A. Keppis, D.D. F.R.S. and S.A. New Edition, 4 vols. 8vo. 1l. 16s. cloth.

DONOVAN.—TREATISE ON CHEMISTRY.

By Michael Donovan, Esq. M.R.I.A. Fourth Edition. 1 vol. foolscap 8vo. with Vignette Title, 6s. cloth.

DONOVAN.—A TREATISE ON DOMESTIC ECONOMY.

By M. Donovan, Esq. M.R.I.A., Professor of Chemistry to the Company of Apothecaries in Ireland. 2 vols. foolscap 8vo. with Vignette Titles, 12s. cloth.

DORA MELDER :

A Story of Alsace. By Meta Sander. Translated and edited by the Rev. C. B. Tayler, author of "Records of a Good Man's Life," &c. Fcp. 8vo., pp. 286, 2 Illustrations, 7s. cloth.

"Viewed in a literary point of view, this tale is admirably told ; whilst an air of reality gives it a true charm."—British Magazine.

DOVER.—LIFE OF FREDERICK II. KING OF PRUSSIA.

By Lord Dover. 2d Edition, 2 vols. 8vo. with Portrait, 28s. boards.

DRUMMOND.—FIRST STEPS TO BOTANY,

Intended as popular Illustrations of the Science, leading to its study as a branch of general education. By J. L. Drummond, M.D. 4th Edit. 12mo. with numerous Woodcuts, 9s. boards.

DUHRING.—THE ART OF LIVING.

By Dr. H. Duhring. Post 8vo. 5s. cloth.

"Happy is life when sound health, pure feelings, rational thoughts, and noble deeds, combine to exalt its earthly course. Then man almost reveals in himself the image of his Deity, and his home becomes a paradise."

DUNHAM.—THE HISTORY OF THE GERMANIC EMPIRE.

By Dr. Dunham. 3 vols. foolscap 8vo. with Vignette Titles, 18s. cloth.

DUNHAM.—THE HISTORY OF EUROPE DURING THE MIDDLE AGES.

By Dr. Dunham. 4 vols. foolscap 8vo. with Vignette Titles, 1l. 4s. cloth.

DUNHAM.—THE HISTORY OF SPAIN AND PORTUGAL.

By Dr. Dunham. 5 vols. foolscap 8vo. with Vignette Titles, 1l. 10s. cloth.

DUNHAM.—THE HISTORY OF DENMARK, SWEDEN, AND NORWAY.

By Dr. Dunham. 3 vols. foolscap 8vo. with Vignette Titles, 18s. cloth.

DUNHAM.—THE HISTORY OF POLAND.

By Dr. Dunham. 1 vol. foolscap 8vo. with Vignette Title, 6s. cloth.

DUNHAM.—THE LIVES OF THE EARLY WRITERS OF GREAT BRITAIN.

By Dr. Dunham, R. Bell, Esq., etc. etc. 1 vol. foolscap 8vo. with Vignette Title, 6s. cloth.

DUNHAM, ETC.—THE LIVES OF BRITISH DRAMATISTS.

By Dr. Dunham, R. Bell, Esq., etc. 2 vols. foolscap 8vo. with Vignette Titles, 12s. cloth.

ELLIOTSON.—HUMAN PHYSIOLOGY :

With which is incorporated much of the Elementary Part of the "Institutiones Physiologicæ" of J. F. Blumenbach, Professor in the University of Gottingen. By John Elliotson, M.D. Cantab. F.R.S. Fifth Edition. Complete in 1 thick vol. 8vo., with numerous Woodcuts, pp. 1206, 2l. 2s. cloth; or separately, in Three Parts, as follows:—

Part 1.—General Physiology, and the Organic Functions. 5th Edition, 10s. 6d.

Part 2.—The Animal Functions. 5th Edition, 14s.

Part 3.—Human Generation; the Growth, Decay, and Varieties of Mankind; with an Appendix on Mesmerism, 17s.

FAREY.—A TREATISE ON THE STEAM-ENGINE,

Historical, Practical, and Descriptive. By John Farey, Engineer. 4to. Illustrated by numerous Woodcuts, and 25 Copper-plates. 5l. 5s. in boards.

FERGUS.—THE HISTORY OF THE UNITED STATES OF AMERICA,

From the Discovery of America to the Election of General Jackson to the Presidency. By the Rev. H. Fergus. 2 vols. foolscap 8vo. with Vignette Titles, 12s. cloth.

FIELD.—POSTHUMOUS EXTRACTS FROM THE VETERINARY

RECORDS OF THE LATE JOHN FIELD. Edited by his Brother, William Field, Veterinary Surgeon, London. 8vo. 8s. boards.

**.* These Records consist of Selections from a vast number of Manuscript papers and cases, extending over a period of twenty years, and treat of most of the diseases incidental to Horses.*

FORD.—THE NEW DEVOUT COMMUNICANT,

According to the Church of England, containing an Account of the Institution, Prayers, and Meditations, before and after the Administration, and a Companion at the Lord's Table. By the Rev. James Ford, B.D. 7th Edit., 18mo. 2s. 6d. bound in cloth, gilt edges; fcap. 8vo. 3s. 6d. bound.

FORD.—A CENTURY OF CHRISTIAN PRAYERS,

On FAITH, HOPE, and CHARITY: with a Morning and Evening Devotion. By the Rev. James Ford, B.D. 3d Edition, 18mo. 4s. cloth.

FORSTER.—STATESMEN OF THE COMMONWEALTH OF ENGLAND.

With an Introductory Treatise on the Popular Progress in English History. By John Forster, Esq. 5 vols. foolscap 8vo. with Original Portraits of Pym, Eliot, Hampden, Cromwell, and an Historical Scene after a Picture by Cattermole, 11. 10s. cloth.

The Introductory Treatise, intended as an Introduction to the Study of the Great Civil War in the Seventeenth Century, separately, price 2s. 6d. sewed.

The above 5 vols. form Mr. Forster's Portion of the Lives of Eminent British Statesmen, by Sir James Mackintosh, the Right Hon. T. P. Courtenay, and John Forster, Esq. 7 vols. foolscap 8vo. with Vignette Titles, 2l. 2s. cloth.

FOSBROKE.—A TREATISE ON THE ARTS, MANNERS, MANUFACTURES, and INSTITUTIONS of the GREEKS and ROMANS. By the Rev. T. D. Fosbroke, etc. 2 vols. foolscap 8vo. with Vignette Titles, 12s. cloth.

FRANKUM.—DISCOURSE ON THE ENLARGED AND PENDULOUS ABDOMEN, shewing it to be a Visceral Affection, attended with Important Consequences in the Human Economy; with cursory Observations on Diet, Exercise, and the General Management of Health: for the use of the Dyspeptic. By Richard Frankum, Esq. Surgeon. The Second Edition, augmented, with a Dissertation on Gout, suggesting new Physiological Views as to its Cause, Prevention, and the best Course of Treatment. Foolscap 8vo. pp. 126, 5s. cloth.

GLEIG.—LIVES OF THE MOST EMINENT BRITISH MILITARY COMMANDERS. By the Rev. G. R. Gleig. 3 vols. foolscap 8vo. with Vignette Titles, 18s. cloth.

GLENDINNING.—PRACTICAL HINTS ON THE CULTURE OF THE PINE APPLE. By R. Glendinning, Gardener to the Right Hon. Lord Rolle, Bicton. 12mo. with Plan of Pinery, 5s. cloth.

GOOD.—THE BOOK OF NATURE.

A Popular Illustration of the General Laws and Phenomena of Creation. By John Mason Good, M.D. F.R.S. etc. 3d Edition, corrected, 3 vols. foolscap 8vo. 24s. cloth.

GRAHAM.—ENGLISH; OR, THE ART OF COMPOSITION

explained in a Series of Instructions and Examples. By G. F. Graham. Foolscap 8vo. pp. 348, 7s. cloth.

GRAHAM.—HELPS TO ENGLISH GRAMMAR;

Or, Easy Exercises for Young Children. By G. F. Graham, author of "English, or the Art of Composition." Foolscap 8vo. illustrated with Engravings on Wood, 3s. cloth.

"Mr. Graham's 'Helps to English Grammar' will be found a good elementary book; and the numerous engravings which it contains must render it extremely attractive to the 'Young Children,' for whose use these 'Easy Exercises' are designed. The arrow, which is for the first time adopted in a work of this sort, to illustrate the connexion, by action or motion, between persons and things, is a happy idea."—Brighton Gazette.

GRATTAN.—THE HISTORY OF THE NETHERLANDS,

From the Invasion by the Romans to the Belgian Revolution in 1830. By T. C. Grattan, Esq. 1 vol. foolscap 8vo. with Vignette Titles, 6s. cloth.

GRAY.—FIGURES OF MOLLUSCOUS ANIMALS,

Selected from various Authors. Etched for the Use of Students. By Maria Emma Gray. Vol. I. pp. 40, with 78 plates of Figures, 12s. cloth.

GRAY AND MITCHELL'S BIRDS.—THE GENERA OF BIRDS;

Comprising their Generic Characters, a Notice of the Habits of each Genus, and an extensive List of Species, referred to their several Genera. By George Robert Gray, Acad. Imp. Georg. Florent. Soc. Corresp. Senior Assistant of the Zoological Department, British Museum; and author of the "List of the Genera of Birds," etc. etc. Illustrated with 350 imperial 4to. Plates, by David William Mitchell, B.A.—*In preparation.*

* Publication will commence when One Hundred Subscribers' Names have been obtained. Prospectuses may be obtained of all Booksellers; a Specimen may be seen at the Publishers.

GREENER.—THE GUN;

Or, a Treatise on the various Descriptions of Small Fire Arms. By W. Greener, Inventor of an Improved Method of Firing Cannon by Percussion, etc. 8vo. with Illustrations, 15s. boards.

GREENER.—SCIENCE OF GUNNERY,

As applied to the use and Construction of Fire Arms. By William Greener, author of "The Gun," etc. With numerous Plates, 15s. cloth.

GRIGOR.—THE EASTERN ARBORETUM:

Or, Register of Remarkable Trees, Seats, Gardens, etc. in the County of Norfolk. With Popular Delineations of the British Sylva. By James Grigor. Illustrated by 50 Drawings of Trees, etched on copper by H. Ninham. 8vo. 17s. 6d. cloth.

GUEST.—THE MABINOÇION,

From the Llyfr Coch o Hergest, or Red Book of Hergest, and other ancient Welsh MSS. with an English Translation and Notes. By Lady Charlotte Guest.

Part 1.—Containing the Lady of the Fountain. Royal 8vo. with Fac-simile and Woodcuts, 8s.

Part 2.—Containing Peredur Ab Evrawc; a Tale of Chivalry. Royal 8vo. with Fac-simile and Woodcuts, 8s.

Part 3.—Containing the Arthurian Romance of

Geraint, the Son of Erbin. Royal 8vo. with Fac-simile and Woodcuts, 8s.

Part 4.—Containing the Romance of Kilhwch and Olwen. Royal 8vo. with 4 Illustrations and Fac-simile, 8s.

Part 5.—Containing the Dream of Rhonabwy, and the Tale of Pwyll Prince of Dyved. Royal 8vo. 8s.

GUIDE TO ALL THE WATERING AND SEA-BATHING PLACES OF

GREAT BRITAIN; containing full and accurate Descriptions of each Place, and of the Curiosities and striking Objects in the Environs; and forming an agreeable and useful Companion during a residence at any of the places, or during a summer tour in quest of health or pleasure: with a Description of the Lakes, and a Tour through Wales. New Edition, including the Scotch Watering Places, 1 thick vol. 18mo. illustrated by 94 Views and Maps, 15s. bound.

GWILT.—AN ENCYCLOPÆDIA OF ARCHITECTURE;

Historical, Theoretical, and Practical. By Joseph Gwilt, Esq. F.S.A. Illustrated with upwards of 1000 Engravings on Wood, from Designs by J. S. Gwilt. In 1 thick vol. 8vo. containing nearly 1300 closely-printed pages, 2l. 12s. 6d. cloth.

HALL.—NEW GENERAL LARGE LIBRARY ATLAS OF FIFTY-THREE

MAPS, on Columbian Paper; with the Divisions and Boundaries carefully coloured. Constructed entirely from New Drawings, and engraved by Sidney Hall. New Edition, thoroughly revised and corrected; including all the Alterations rendered necessary by the recent Official Surveys, the New Roads on the Continent, and a careful Comparison with the authenticated Discoveries published in the latest Voyages and Travels. Folded in half, Nine Guineas, half-bound in Russia; full size of the Maps, Ten Pounds, half-bound in Russia.

HALSTED.—LIFE AND TIMES OF RICHARD THE THIRD,

as Duke of Gloucester and King of England: in which all the Charges against him are carefully investigated and compared with the Statements of the Cotemporary Authorities. By Caroline A. Halsted, author of "The Life of Margaret Beaufort." 2 vols. with an original Portrait never before published.—*In the press.*

HAND-BOOK OF TASTE;

Or, How to Observe Works of Art, especially Cartoons, Pictures, and Statues. By Fabius Pictor, foolscap 8vo. 3s. boards.

"In these days, when every man is taught to be his own lawyer, his own physician, and so forth, we see no reason why he should not be his own critic. Here is a little volume telling him what he should think of works of art, how he should think, and why he should think. The author gives a number of excellent maxims for observing pictures and judging of them in all their detail of handling, colouring, grouping, and so forth. We can commend the work as cleverly written, and propounding correct views on art."—*Court Journal.*

HANSARD.—TROUT AND SALMON FISHING IN WALES.

By G. A. Hansard, 12mo. 6s. 6d. cloth.

HARCOURT.—THE DOCTRINE OF THE DELUGE;

Vindicating the Scriptural Account from the Doubts which have recently been cast upon it by Geological Speculations. By the Rev. L. Vernon Harcourt. 2 vols. 8vo. 36s. cloth.

HARFORD.—LIFE OF THOMAS BURGESS, D.D. F.R.S., ETC.

Late Lord Bishop of Salisbury; including an extensive Religious and Literary Correspondence. By John S. Harford, Esq. D.C.L. F.L.S. 2d edition, with additions, fcap. 8vo. with Portrait, 8s. 6d. cloth.

HAWKER.—INSTRUCTIONS TO YOUNG SPORTSMEN

In all that relates to Guns and Shooting. By Lieut. Col. P. Hawker. 8th edition, corrected, enlarged, and improved, with numerous Explanatory Plates and Woodcuts, 8vo. 1l. 1s. cloth.

HENSLOW.—THE PRINCIPLES OF DESCRIPTIVE AND PHYSIOLOGICAL BOTANY.

By J. S. Henslow, M.A. F.L.S. etc. 1 vol. foolscap 8vo. with Vignette Title, and nearly 70 Woodcuts, 6s. cloth.

HERSCHEL.—A TREATISE ON ASTRONOMY.

By Sir John Herschel. New Edition. 1 vol. fcap. 8vo. Vignette Title, 6s. cloth.

HERSCHEL.—A PRELIMINARY DISCOURSE ON THE STUDY OF

NATURAL PHILOSOPHY. By Sir John Herschel. New Edition. 1 vol. foolscap 8vo. with Vignette Title, 6s. cloth.

HINTS ON ETIQUETTE AND THE USAGES OF SOCIETY:

With a Glance at Bad Habits. By *Αγαγός*. "Manners make the Man." 25th Edition, revised (with additions) by a Lady of Rank. Foolscap 8vo. 2s. 6d. handsomely bound in fancy cloth, gilt edges.

General Observations; Introductions—Letters of Introduction—Marriage—Dinners—Smoking; Snuff—Fashion—Dress—Music—Dancing—Conversation—Advice to Tradespeople—Visiting; Visiting Cards—Cards—Tatling—of General Society.

HOARE.—A PRACTICAL TREATISE ON THE CULTIVATION OF THE GRAPE VINE ON OPEN WALLS. By Clement Hoare. 3d Edition, 8vo. 7s. 6d. cloth.

CONTENTS.

Introduction; Observations on the present Method of Cultivating Grape Vines on open Walls; on the capability and extent of the Fruit-bearing Powers of the Vine; on Aspect; on Soil; on Manure; on the Construction of Walls; on the Propagation of Vines; on the Pruning of Vines; on the Training of Vines; on the Management of a Vine during the first five years of its growth; Weekly Calendrical Register; General Autumnal Prunings; on the Winter Management of the Vine; on the Planting and Management of Vines in the Public thoroughfares of Towns; Descriptive Catalogue of twelve sorts of Grapes most suitably adapted for Culture on Open Walls.

HOLLAND.—PROGRESSIVE EDUCATION;

Or, Considerations on the Course of Life. Translated from the French of Madame Necker de Saussure. By Miss Holland. 3 vols. foolscap 8vo. 19s. 6d. cloth.

*. * *The Third Volume, forming an appropriate conclusion to the first two, separately, 7s. 6d.*

HOLLAND.—A TREATISE ON THE MANUFACTURES IN METAL.

By John Holland, Esq. 3 vols. foolscap 8vo. with Vignette Titles, and about 300 Woodcuts, 18s. cloth.

HOLLAND.—MEDICAL NOTES AND REFLECTIONS.

By Henry Holland, M.D. F.R.S. etc. Fellow of the Royal College of Physicians, Physician Extraordinary to the Queen, and Physician in Ordinary to His Royal Highness Prince Albert. 2d Edition, 1 vol. 8vo. pp. 654, 18s. cloth.

HOOKE.—THE BRITISH FLORA.

Vol. I.; comprising the Phanogamous or Flowering Plants, and the Ferns. By Sir William Jackson Hooker, K.H. LL.D. F.R.A. and L.S. etc. etc. 5th Edition, with Additions and Corrections; and 173 Figures, illustrative of the Umbelliferous Plants, the Composite Plants, the Grasses, and the Ferns. Vol. I. 8vo. pp. 502, with 12 Plates, 14s. plain; with the plates coloured, 24s. cloth.

Vol. II. in Two Parts, completing the British Flora, 24s. boards.

HOOKE.—COMPENDIUM OF THE ENGLISH FLORA.

2d Edition, with Additions and Corrections. By Sir W. J. Hooker. 12mo. 7s. 6d. cloth.

THE SAME IN LATIN. 5th Edition, 12mo. 7s. 6d.

HOOKE.—ICONES PLANTARUM;

Or, Figures, with brief Descriptive Characters and Remarks, of New and Rare Plants, selected from the Author's Herbarium. By Sir W. J. Hooker, K.H. LL.D. etc. 4 vols. 8vo. with 400 Plates, 5l. 12s. cloth.

HOOKE AND TAYLOR.—MUSCOLOGIA BRITANNICA.

Containing the Mosses of Great Britain and Ireland, systematically arranged and described; with Plates, illustrative of the character of the Genera and Species. By Sir W. J. Hooker and T. Taylor, M.D. F.L.S. etc. 2d Edition, 8vo. enlarged, 31s. 6d. plain; 3l. 3s. coloured.

HOWITT (MARY).—THE HOME;

Or, Family Cares and Family Joys. By Frederika Bremer. Translated by Mary Howitt. 2d Edition. 2 vols. post 8vo. 21s. boards.

"*Miss Bremer possesses, beyond any other living writer of her class, the power of realising to the imagination every individual she introduces. There is scarcely a single person in her multitudinous groups that does not stand out palpably in his living lineaments. The minute fidelity of her details, the vivid distinctness with which every mental struggle and secret emotion is traced; the moral beauty and womanly purity which steadily illuminate her narrative; and the calm Christian philosophy out of which all its earnest lessons of truth, and justice, and resignation, and serene wisdom, are drawn, must receive implicit admiration on all hands.*"—Examiner.

HOWITT (MARY).—THE NEIGHBOURS:

A Story of Every-day Life in Sweden. By Frederika Bremer. Translated by Mary Howitt. 3d Edition, revised, 2 vols. post 8vo. 18s. boards.

HOWITT (MARY).—THE PRESIDENT'S DAUGHTERS,

Including NINA. By Frederika Bremer. Translated by Mary Howitt. 3 vols. post 8vo. 31s. 6d. boards.

"*'The President's Daughters' is a worthy companion to 'The Neighbours'—simple and truthful; and though we may never have met elsewhere any one of the characters, all who have ever looked deeply into their own hearts will claim kindred and acquaintance with them. There is not one that offends by exaggeration—not one that is not recognised at a glance by the humanities of our common nature—they are creatures of flesh and blood, and walk the stage of life as it has been trod for ages, and will be trod for ever. No impossible vice, no super-human virtue, startles us in Miss Bremer's pages: we recognise in her heroes and heroines men and women with whom we ourselves could have lived and been happy.*"—Athenæum

HOWITT.—THE RURAL LIFE OF ENGLAND.

By William Howitt. New Edition, medium 8vo. with Engravings on Wood by Bewick and Williams, uniform with "Visits to Remarkable Places," 21s. cloth.

CONTENTS.

Life of the Aristocracy.
Life of the Agricultural Population.
Picturesque and Moral Features of the Country.
Strong Attachment of the English to Country Life.

The Forests of England.
Habits, Amusements, and Condition of the People; in which are introduced Two New Chapters, descriptive of the Rural Watering Places, and Education of Rural Population.

HOWITT.—VISITS TO REMARKABLE PLACES;

Old Halls, Battle-Fields, and Scenes illustrative of Striking Passages in English History and Poetry. By William Howitt. New Edition, medium 8vo. with 40 Illustrations by S. Williams, 21s. cloth.

SECOND SERIES, chiefly in the Counties of DURHAM and NORTHUMBERLAND, with a Stroll along the BORDER. 1 vol. medium 8vo. with upwards of 40 highly-finished Woodcuts, from Drawings made on the spot for this Work, by Messrs. Carmichael, Richardsons, and Weld Taylor, 21s. cloth.

HOWITT.—THE RURAL AND DOMESTIC LIFE OF GERMANY:

With Characteristic Sketches of its chief Cities and Scenery. Collected in a General Tour, and during a Residence in that Country in the Years 1840-42. By William Howitt, author of "The Rural Life of England," "Visits to Remarkable Places," "The Boy's Country Book," etc. 1 vol. medium 8vo., with above 50 Illustrations, 21s. cloth.

"We cordially record our conviction of the value of Mr. Howitt's volume, and strongly recommend its early perusal. It is both instructive and entertaining, and will be found to familiarize the English reader with forms of character and modes of social life, vastly different from anything witnessed at home."—Eclectic Review.

HOWITT.—THE STUDENT-LIFE OF GERMANY.

From the Unpublished MS. of Dr. Cornelius. By William Howitt. 8vo. with 24 Wood-Engravings, and 7 Steel Plates, 21s. cloth.

. *This Volume contains Forty of the most famous Student Songs, with the Original Music adapted to the pianoforte by Winkelmeyer.*

HOWITT.—COLONISATION AND CHRISTIANITY:

A Popular History of the Treatment of the Natives, in all their Colonies, by the Europeans. By William Howitt. 1 vol. post 8vo. 10s. 6d. cloth.

HOWITT.—THE BOY'S COUNTRY BOOK:

Being the real Life of a Country Boy, written by Himself; exhibiting all the Amusements, Pleasures, and Pursuits of Children in the Country. Edited by William Howitt, author of "The Rural Life of England," etc. 2d Edition, fcap. 8vo. with about 40 Woodcuts, 8s. cloth.

HUDSON.—THE PARENT'S HAND-BOOK;

Or, Guide to the Choice of Professions, Employments, and Situations; containing useful and practical information on the subject of placing out Young Men, and of obtaining their Education with a view to particular occupations. By J. C. Hudson, Esq., author of "Plain Directions for Making Wills." Fcp. 8vo. pp. 254, 5s. cloth.

"This volume will be found useful to any parent who is painfully meditating upon that difficult subject, how and where he can best place his sons in the world."—Spectator.

HUDSON.—PLAIN DIRECTIONS FOR MAKING WILLS

In Conformity with the Law, and particularly with reference to the Act 7 Wm. IV. and 1 Vict. c. 26. To which is added, a clear Exposition of the Law relating to the Distribution of Personal Estate in the case of Intestacy; with two Forms of Wills, and much useful Information, etc. By J. C. Hudson, of the Legacy Duty Office, London. 12th Edition, corrected, with Notes of Cases judicially decided since the above Act came into operation. Foolscape 8vo. 2s. 6d. cloth, gilt edges.

HUDSON.—THE EXECUTOR'S GUIDE.

By J. C. Hudson. 3d Edition, foolscap 8vo. 5s. cloth.

. *The above two works may be had in 1 volume, price 7s. cloth.*

INGEMANN.—KING ERIC AND THE OUTLAWS;

Or, the Throne, the Church, and the People, in the Thirteenth Century. By Ingemann. Translated from the Danish by Jane Frances Chapman. 3 vols. post 8vo. 11. 11s. 6d. boards.

"Full of incident and adventure. We recollect few novels in which the attention of the reader is more quickly interested or more deeply absorbed. The characters are struck off with a shrewd intelligence, and contrast admirably; and the whole tale is original, lively, and varied in no common degree."—Court Journal.

JACKSON.—PICTORIAL FLORA;

Or, British Botany Delineated, in 1500 Lithographic Drawings of all the Species of Flowering Plants indigenous to Great Britain; illustrating the descriptive works on English Botany of Hooker, Lindley, Smith, etc. By Miss Jackson. 8vo. 15s. cloth.

JACKSON, ETC.—THE MILITARY LIFE OF FIELD-MARSHAL THE DUKE OF WELLINGTON, K.G. ETC. ETC. By Major Basil Jackson, and Captain C. Rochfort Scott, late of the Royal Staff Corps. 2 vols. 8vo. with Portraits and numerous Plans of Battles, 30s. cloth.

JAMES.—EVA ST. CLAIR;

And other Collected Tales. By G. P. R. James, Esq. 2 vols. post 8vo. 21s. boards.

Also, by the same Author,

The Jacquerie—The Ancient Régime—Corse De Leon—The King's Highway—Henry of Guise—The Huguenot—The Gentleman of the Old School—The Robber—Life and Adventures of John Marston Hall—Mary of Burgundy—One in a Thousand—Attila. Each in 3 vols. post 8vo. 31s. 6d. boards.

JAMES.—A HISTORY OF THE LIFE OF EDWARD THE BLACK PRINCE,
And of various Events connected therewith, which occurred during the Reign of Edward III. King of England. By G. P. R. James, Esq. 2d Edition, 2 vols. foolscap 8vo. with Map, 15s. cloth.

JAMES.—LIVES OF THE MOST EMINENT FOREIGN STATESMEN.
By G. P. R. James, Esq., and E. E. Crowe, Esq. 5 vols. foolscap 8vo. with Vignette Titles. 30s. cloth.

LORD JEFFREY.—LORD JEFFREY'S CONTRIBUTIONS TO THE EDINBURGH REVIEW. Four Volumes, 8vo.

*** An announcement having been made by an American publisher, that Lord Jeffery had made a selection of his writings with a view to American publication, Messrs. Longman and Co. are authorised to contradict that statement.*

JOHNSON.—THE FARMER'S ENCYCLOPÆDIA,
And DICTIONARY of RURAL AFFAIRS: embracing all the recent Discoveries in Agricultural Chemistry; adapted to the comprehension of unscientific Readers. By Cuthbert W. Johnson, Esq., F.R.S. Barrister-at-Law, Corresponding Member of the Agricultural Society of Königsberg, and of the Maryland Horticultural Society, Author of several of the Prize Essays of the Royal Agricultural Society of England, and other Agricultural Works; Editor of the "Farmer's Almanack," etc. 1 thick vol. 8vo pp. 1324, illustrated by Wood Engravings of the best and most improved Agricultural Implements. 2l. 10s. cloth.

KANE.—ELEMENTS OF CHEMISTRY;
Including the most Recent Discoveries and Applications of the Science to Medicine and Pharmacy, and to the Arts. By Robert Kane, M.D. M.R.I.A. Professor of Natural Philosophy to the Royal Dublin Society. 1 thick volume, 8vo. with 236 Woodcuts, 24s. cloth.

KATER AND LARDNER.—A TREATISE ON MECHANICS.
By Captain Kater and Dr. Lardner. New Edition. 1 vol. foolscap 8vo. Vignette Title, and 19 Plates, comprising 224 distinct figures, 6s. cloth.

KEIGHTLEY.—THE HISTORY OF ENGLAND.
By Thomas Keightley, Esq. In 2 vols. 12mo. pp. 1206, 14s. cloth; or bound, 15s.
For the convenience of Schools the volumes will always be sold separately.

KEIGHTLEY.—AN ELEMENTARY HISTORY OF ENGLAND.
By Thomas Keightley, Esq., author of "A History of England," "Greece," "Rome," "Outlines of History," etc. etc. 12mo. pp. 364, 5s. bound.

KEIGHTLEY.—THE HISTORY OF GREECE.
By Thomas Keightley, Esq. Third Edition, 12mo. pp. 508, 6s. 6d. cloth, or 7s. bound.
ELEMENTARY HISTORY of GREECE, 18mo. pp. 264, 3s. 6d. bound.

KEIGHTLEY.—THE HISTORY OF ROME,
To the end of the Republic. By Thomas Keightley, Esq. Third Edition, 12mo. pp. 512, 6s. 6d. cloth, or 7s. bound.
ELEMENTARY HISTORY of ROME, 18mo. pp. 294, 3s. 6d. bound.

KEIGHTLEY.—THE HISTORY OF THE ROMAN EMPIRE,
From the Accession of Augustus to the End of the Empire in the West. By Thomas Keightley, Esq. 12mo. pp. 456, 6s. 6d. cloth, or 7s. bound.
QUESTIONS on the HISTORIES OF ENGLAND, Parts I. and II., pp. 56 each; **ROME,** 3d edition, pp. 40; **GREECE,** 3d edition, pp. 42. 12mo. sewed, 1s. each.

KEIGHTLEY.—OUTLINES OF HISTORY,
From the Earliest Period. By Thomas Keightley, Esq. New Edition, corrected and considerably improved, foolscap 8vo. pp. 468, 6s. cloth; or 6s. 6d. bound.

KIPPIS.—A COLLECTION OF HYMNS AND PSALMS,
For Public and Private Worship. Selected and prepared by A. Kippis, D.D., Abraham Rees, D.D., the Rev. Thomas Jervis, and the Rev. T. Morgan. To which is added, a Supplement. New Edition corrected and improved, 18mo. 5s. bound.

KIRBY AND SPENCE.—AN INTRODUCTION TO ENTOMOLOGY;

Or, Elements of the Natural History of Insects: comprising an account of noxious and useful insects, of their Metamorphoses, Food, Stratagems, Habitations, Societies, Motions, Noises, Hybernation, Instinct, etc. By W. Kirby, M.A. F.R.S. & L.S. Rector of Barham; and W. Spence, Esq., F.R.S. & L.S. 6th Edition, corrected and considerably enlarged, 2 vols. 8vo. 1l. 11s. 6d. cloth.

The first two volumes of the "Introduction to Entomology" are now published as a separate work, distinct from the third and fourth volumes, and, though much enlarged, at a considerable reduction of price, in order that the numerous class of readers who confine their study of insects to that of their manners and economy, need not be burthened with the cost of the technical portion of the work relating to their anatomy, physiology, etc.

KNAPP.—GRAMINA BRITANNICA;

Or, Representations of the British Grasses: with Remarks and occasional Descriptions. By I. L. Knapp, Esq. F.L.S. & A.S. 2d Edition, 4to. with 118 Plates, beautifully coloured, pp. 250, 3l. 16s. boards.

LAING.—A TOUR IN SWEDEN

In 1838; comprising Observations on the Moral, Political, and Economical State of the Swedish Nation. By Samuel Laing, Esq. 8vo. 12s. cloth.

LAING.—NOTES OF A TRAVELLER

On the Social and Political State of France, Prussia, Switzerland, Italy, and other parts of Europe, during the present Century. By Samuel Laing, Esq. 2d Edition, 8vo. 16s. cloth.

LAING.—JOURNAL OF A RESIDENCE IN NORWAY

During the years 1834, 1835, and 1836; made with a view to inquire into the Rural and Political Economy of that Country, and the Condition of its Inhabitants. By Samuel Laing, Esq. 2d Edition, 8vo. 14s. cloth.

LAING.—THE CHRONICLE OF THE KINGS OF NORWAY,

From the Earliest Period of the History of the Northern Sea Kings to the Middle of the Twelfth Century, commonly called the Heimskringla. Translated from the Icelandic of Snorro Sturleson, with Notes, and a Preliminary Discourse, by Samuel Laing, author of "A Residence in Norway," "A Tour in Sweden," and "Notes of a Traveller."

Preparing for publication.

LARDNER'S CABINET CYCLOPÆDIA;

Comprising a Series of Original Works on History, Biography, Literature, the Sciences, Arts, and Manufactures. Conducted and edited by Dr. Lardner.

The Series complete in One Hundred and Thirty-three Volumes, 39l. 18s. (Three Volumes remain to be published.) The Works separate, at 6s. per volume.

LARDNER.—A TREATISE ON ARITHMETIC.

By Dr. Lardner, LL.D. F.R.S. 1 vol. foolscap 8vo. with Vignette Title, 6s. cloth lettered.

LARDNER.—A TREATISE ON ELECTRICITY AND MAGNETISM.

By Dr. Lardner. 2 vols. foolscap 8vo. 12s. (Vol. 2, *in the press.*)

LARDNER.—A TREATISE ON GEOMETRY,

And its Application to the Arts. By Dr. Lardner. 1 vol. foolscap 8vo. Vignette Title, and upwards of 200 figures, 6s. cloth.

LARDNER.—A TREATISE ON HEAT.

By Dr. Lardner, LL.D., etc. 1 vol. fcap. 8vo. with Woodcuts and Vignette Title, 6s. cloth.

LARDNER.—A TREATISE ON HYDROSTATICS AND PNEUMATICS.

By Dr. Lardner. New Edition. 1 vol. foolscap 8vo. 6s. cloth.

LECTURES ON POLARISED LIGHT,

Delivered by Dr. Pereira, before the Pharmaceutical Society, and in the Medical School of the London Hospital. 8vo. illustrated by above 50 Woodcuts, 5s. 6d. cloth.

L. E. L.—THE POETICAL WORKS OF LETITIA ELIZABETH LANDON.

New Edition (1839), 4 vols. foolscap 8vo. with Illustrations by Howard, etc. 28s. cloth lettered; or handsomely bound in morocco, with gilt edges, 2l. 4s.

The following may be had separately:—

THE IMPROVISATRICE	- - 10s. 6d.	THE GOLDEN VIOLET	- - - 10s. 6d.
THE VENETIAN BRACELET	10s. 6d.	THE TROUBADOUR	- - - 10s. 6d.

LIFE OF A TRAVELLING PHYSICIAN,

From his first Introduction to Practice; including Twenty Years' Wanderings throughout the greater part of Europe. 3 vols. post 8vo. with coloured Frontispieces, 31s. 6d. cloth.

LIGHTER HOURS:

A Series of Poems. By an Etonian. Fcp. 8vo. 5s. cloth.

LINDLEY.—INTRODUCTION TO BOTANY.

By Prof. J. Lindley, Ph.D. F.R.S. L.S. etc. 3d Edition (1839), with Corrections and considerable Additions, 1 large vol. 8vo. pp. 606, with Six Plates and numerous Woodcuts, 18s. cloth.

LINDLEY.—A NATURAL SYSTEM OF BOTANY ;

Or, a Systematic View of the Organization, Natural Affinities, and Geographical Distribution, of the whole Vegetable Kingdom ; together with the uses of the most important species in Medicine, the Arts, and Rural or Domestic Economy. By John Lindley, Ph.D. F.R.S. L.S. etc. 2d Edition, with numerous additions and corrections, and a complete List of Genera, with their Synonyms. 8vo. 18s. cloth.

LINDLEY.—FLORA MEDICA ;

A Botanical Account of all the most important Plants used in Medicine, in different Parts of the World. By John Lindley, Ph.D. F.R.S. etc. 1 vol. 8vo. 18s. cloth.

LINDLEY.—SCHOOL BOTANY ;

Or, an Explanation of the Characters and Differences of the principal Natural Classes and Orders of Plants belonging to the Flora of Europe, in the Botanical Classification of De Candolle. For the use of Students preparing for their matriculation examination in the University of London, and applicable to Botanical Study in general. By John Lindley, Ph.D. F.R.S. etc. 1 vol. foolscap 8vo. with upwards of 160 Woodcuts, 6s. cloth.

LINDLEY.—A SYNOPSIS OF THE BRITISH FLORA,

Arranged according to the Natural Orders. By Professor John Lindley, Ph. D., F.R.S., etc. The 3d Edition, with numerous Additions, Corrections, and Improvements, 12mo. pp. 390, 10s. 6d. cloth.

LINDLEY.—THE THEORY OF HORTICULTURE ;

Or, an Attempt to Explain the Principal Operations of Gardening upon Physiological Principles. By John Lindley, Ph.D. F.R.S. 1 vol. 8vo. with Illustrations on Wood. 12s. cloth.

This book is written in the hope of providing the intelligent gardener, and the scientific amateur, correctly, with the rationalia of the more important operations of Horticulture ; and the author has endeavoured to present to his readers an intelligible explanation, founded upon well ascertained facts, which they can judge of by their own means of observation, of the general nature of vegetable actions, and of the causes which, while they control the powers of life in plants, are capable of being regulated by themselves. The possession of such knowledge will necessarily teach them how to improve their methods of cultivation, and lead them to the discovery of new and better modes.

LINDLEY.—AN OUTLINE OF THE FIRST PRINCIPLES OF HORTICULTURE.

By Professor Lindley. 18mo. 2s. sewed.

LINDLEY.—GUIDE TO THE ORCHARD AND KITCHEN GARDEN ;

Or, an Account of the most valuable Fruits and Vegetables cultivated in Great Britain : with Kalendars of the Work required in the Orchard and Kitchen Garden during every month in the year. By George Lindley, C.M.H.S. Edited by Professor Lindley. 1 large vol. 8vo. 16s. boards.

LLOYD.—A TREATISE ON LIGHT AND VISION.

By the Rev. H. Lloyd, M.A., Fellow of Trin. Coll. Dublin. 8vo. 15s. boards.

LORIMER.—LETTERS TO A YOUNG MASTER MARINER,

On some Subjects connected with his Calling. By Charles Lorimer. 3d edition, 12mo. with an Appendix, 5s. 6d. cloth.

LOUDON.—AN ENCYCLOPÆDIA OF TREES AND SHRUBS ;

Being the "Arboretum et Fruticetum Britannicum" abridged : containing the Hardy Trees and Shrubs of Great Britain, Native and Foreign, scientifically and popularly described : with their Propagation, Culture, and Uses in the Arts ; and with Engravings of nearly all the Species. For the use of Nurserymen, Gardeners, and Foresters. By J.C. Loudon, F.L.S. etc. In 8vo. pp. 1234, with upwards of 2000 Engravings on Wood, 2l. 10s. cloth.

The Original Work may be had in 8 vols. 8vo. with above 400 8vo. Plates of Trees, and upwards of 2500 Woodcuts, 10l. cloth.

LOUDON.—AN ENCYCLOPÆDIA OF GARDENING ;

Presenting in one systematic view, the History and Present State of Gardening in all Countries, and its Theory and Practice in Great Britain : with the Management of the Kitchen Garden, the Flower Garden, Laying-out Grounds, etc. By J. C. Loudon, F.L.S. etc. A new Edition, enlarged and much improved, 1 large vol. 8vo. with nearly 1000 Engravings on Wood, pp. 1312, 2l. 10s. cloth.

LOUDON.—AN ENCYCLOPÆDIA OF AGRICULTURE;

Comprising its History in all Countries; the principles on which Agricultural Operations depend, and their Application to Great Britain and similar Climates. By J. C. Loudon, F.L.S. etc. The Third Edition, 1 large vol. 8vo. pp. 1418, with nearly 1300 Wood Engravings. 2l. 10s. cloth.

LOUDON.—AN ENCYCLOPÆDIA OF PLANTS;

Including all the Plants which are now found in, or have been introduced into, Great Britain; giving their Natural History, accompanied by such Descriptions, Engraved Figures, and Elementary Details, as may enable a beginner, who is a mere English reader, to discover the name of every Plant which he may find in flower, and acquire all the information respecting it which is useful and interesting. The Specific Characters by an Eminent Botanist; the Drawings by J. D. C. Sowerby, F.L.S. A new Edition (1841), with a new Supplement, comprising every desirable particular respecting all the Plants originated in, or introduced into, Britain between the first publication of the work, in 1829, and January 1840: with a new General Index to the whole work. Edited by J. C. Loudon, prepared by W. H. Baxter, Jun., and revised by George Don, F.L.S.; and 800 new Figures of Plants, on Wood, from Drawings by J. D. C. Sowerby, F.L.S. One very large vol. 8vo. with nearly 10,000 Wood Engravings pp. 1354, 3l. 13s. 6d.

*. * The New Supplement (1841), *separately*, 8vo. pp. 190, 15s. cloth.

LOUDON.—AN ENCYCLOPÆDIA OF COTTAGE, FARM, AND VILLA

ARCHITECTURE and FURNITURE. Containing Designs for Cottages, Villas, Farm Houses, Farmeries, Country Inns, Public Houses, Parochial Schools, etc.; with the requisite Fittings-up, Fixtures, and Furniture, and appropriate Offices, Gardens, and Garden Scenery: each Design accompanied by Analytical and Critical Remarks illustrative of the Principles of Architectural Science and Taste on which it is composed, and General Estimates of the Expense. By J. C. Loudon, F.L.S. etc. New Edition (1842), corrected, with a Supplement containing 160 additional pages of letter-press, and nearly 300 new engravings, bringing down the work to 1842. In 1 very thick vol. 8vo. pp. 1326, with more than 2000 Engravings on Wood, 3l. 3s. cloth.

*. * The New Supplement, *separately*, 8vo. pp. 174, 7s. 6d. sewed.

LOUDON.—HORTUS BRITANNICUS:

A Catalogue of all the Plants indigenous to or introduced into Britain. The 3d Edition (1832), with a New Supplement, prepared, under the direction of J. C. Loudon, by W. H. Baxter, and revised by George Don, F.L.S. 1 vol. 8vo. pp. 766, 31s. 6d. cloth.

The First Supplement (1835) *separately*, 8vo. pp. 26, 2s. 6d. sewed.

The New Supplement (1839) *separately*, 8vo. pp. 742, 8s. sewed.

LOUDON.—THE SUBURBAN GARDENER AND VILLA COMPANION:

Comprising the Choice of a Villa or Suburban Residence, or of a situation on which to form one; the Arrangement and Furnishing of the House; and the Laying-out, Planting, and general Management of the Garden and Grounds; the whole adapted for grounds from one perch to fifty acres and upwards in extent; intended for the instruction of those who know little of Gardening or Rural Affairs, and more particularly for the use of Ladies. By J. C. Loudon, F.L.S., etc. 1 vol 8vo. with above 300 Wood Engravings, 20s. cloth.

LOUDON.—HORTUS LIGNOSUS LONDINENSIS;

Or, a Catalogue of all the Ligneous Plants cultivated in the neighbourhood of London. To which are added their usual Prices in Nurseries. By J. C. Loudon, F.L.S. etc. 8vo. 7s. 6d.

LOUDON.—ON THE LAYING-OUT, PLANTING, AND MANAGEMENT OF

CEMETERIES; and on the Improvement of Churchyards. By J. C. Loudon, F.L.S. etc. 8vo. with 60 Engravings, 12s. cloth.

LOW.—THE BREEDS OF THE DOMESTICATED ANIMALS OF GREAT

BRITAIN described. By David Low, Esq. F.R.S.E., Professor of Agriculture in the University of Edinburgh; Member of the Royal Academy of Agriculture of Sweden; Corresponding Member of the Conseil Royal d'Agriculture de France, of the Société Royale et Centrale, etc. etc. The Plates from drawings by W. Nicholson, R.S.A., reduced from a Series of Oil Paintings, executed for the Agricultural Museum of the University of Edinburgh by W. Shiels, R.S.A. In 2 vols. atlas quarto, with 52 plates of animals, beautifully coloured after Nature, 16l. 16s. half-bound in morocco.

Or in four separate portions, as follow:—

The OX, in 1 vol. atlas quarto, with 22 Plates, price 6l. 16s. 6d. half-bound morocco.

The SHEEP, in 1 vol. atlas quarto, with 21 Plates, price 6l. 16s. 6d. half-bound morocco.

The HORSE, in 1 vol. atlas quarto, with 8 Plates, price 3l. half-bound morocco.

The HOG, in 1 vol. atlas quarto, with 5 Plates, price 2l. 2s. half-bound morocco.

LOW.—ELEMENTS OF PRACTICAL AGRICULTURE;

Comprehending the Cultivation of Plants, the Husbandry of the Domestic Animals, and the Economy of the Farm. By David Low, Esq. F.R.S.E., Professor of Agriculture in the University of Edinburgh. 8vo. 4th Edition, with Alterations and Additions, and above 200 Woodcuts, 2ls. cloth.

"The opinion of the public has been pronounced in favour of this excellent book in a manner not to be mistaken. It is the best treatise on agriculture in the language, and this is much the best edition of it. A passage in the preface is so full of practical wisdom, and is applicable with so much justice to agricultural affairs in their present state, that we cannot do better than quote it, partly for its intrinsic value, and partly as an indication of the manner in which Professor Low has extended the matter of his valuable pages."—Professor Lindley in the Gardener's Chronicle.

MACAULAY.—CRITICAL AND HISTORICAL ESSAYS CONTRIBUTED TO

the EDINBURGH REVIEW. By the Right Hon. Thomas Babington Macaulay. 2d Edition. 3 vols. 8vo. 36s. cloth.

MACAULAY.—LAYS OF ANCIENT ROME.

By T. B. Macaulay, Esq. 3d Edition, crown 8vo. pp. 192, 10s. 6d. cloth.

MACKENZIE.—THE PHYSIOLOGY OF VISION.

By W. Mackenzie, M.D., Lecturer on the Eye in the University of Glasgow. 8vo. with Woodcuts, 10s. 6d. boards.

MACKINTOSH, ETC.—THE HISTORY OF ENGLAND.

By Sir James Mackintosh; W. Wallace, Esq.; and Robert Bell, Esq. 10 vols. foolscap 8vo. with Vignette Titles, 3l. cloth.

MACLEOD.—ON RHEUMATISM,

And on the Affections of the Internal Organs, more especially the Heart and Brain, to which it gives rise. By R. Macleod, M.D. Physician to St. George's Hospital. 1 vol. 8vo. pp. 172, 7s. cloth.

MALTE-BRUN.—A SYSTEM OF UNIVERSAL GEOGRAPHY,

Founded on the Works of Malte-Brun and Balbi, embracing an Historical Sketch of the Progress of Geographical Discovery, the Principles of Mathematical and Physical Geography, and a complete Description, from the most recent sources, of the Political and Social Condition of all the Countries in the World: with numerous Statistical Tables, and an Alphabetical Index of 12,000 Names. 1 thick vol. 8vo. closely and beautifully printed, 30s. cloth.

MANUAL FOR MECHANICS' INSTITUTIONS.

Published under the Superintendence of the Society for the Diffusion of Useful Knowledge. Post 8vo. 5s. cloth.

MARCET (MRS.)—CONVERSATIONS ON THE HISTORY OF ENGLAND.

For the Use of Children. Vol. I. containing the History to the Reign of Henry VII. 18mo. pp. 354, 4s. 6d. cloth.

"Juvenile literature will freely own how much it is indebted to Mrs. Marcet, not only for the present, but all her preceding works. She imparts interest to dry and dull details; and, while she teaches, begets a desire in her pupils for further knowledge, so pleasantly imparted. These 'Conversations,' admirably suited to the capacities of children, may be skimmed advantageously by 'children of a larger growth.'"—Literary Gazette.

MARCET.—CONVERSATIONS ON CHEMISTRY;

In which the Elements of that Science are familiarly Explained and Illustrated by Experiments. 14th Edition (1841), enlarged and corrected, 2 vols. foolscap 8vo. pp. 732, 14s. cloth.

MARCET.—CONVERSATIONS ON NATURAL PHILOSOPHY;

In which the Elements of that Science are familiarly explained, and adapted to the comprehension of Young Persons. 10th Edition (1839), enlarged and corrected by the Author. 1 vol. foolscap 8vo. pp. 484, with 23 Plates, 10s. 6d. cloth.

CONTENTS.

Of the General Properties of Bodies; the Attraction of Gravity; the Laws of Motion; Compound Motion; the Mechanical Powers; Astronomy; Causes of the Earth's Motion; the Planets; the Earth; the Moon; Hydrostatics; the Mechanical Properties of Fluids;

of Springs, Fountains, etc.; Pneumatics; the Mechanical Properties of Air; on Wind and Sound; Optics; the Visual Angle and the Reflection of Mirrors; on Refraction and Colours; on the Structure of the Eye, and Optical Instruments.

MARCET.—CONVERSATIONS ON POLITICAL ECONOMY;

In which the Elements of that Science are familiarly explained. 7th Edition (1839), revised and enlarged, 1 vol. foolscap 8vo. pp. 424, 7s. 6d. cloth.

CONTENTS.

Introduction; on Property; the Division of Labour; on Capital; on Wages and Population; on the Condition of the Poor; on Value and Price; on Income; Income from Landed

Property; Income from the Cultivation of Land; Income from Capital lent; on Money; on Commerce; on Foreign Trade; on Expenditure and Consumption.

MARCET.—CONVERSATIONS ON VEGETABLE PHYSIOLOGY;

Comprehending the Elements of Botany, with their application to Agriculture. 3d Edition (1839), 1 vol. foolscap 8vo. pp. 474, with Four Plates, 9s. cloth.

CONTENTS.

Introduction; on Roots; on Stems; on Leaves; on Sap; on Cambium and the peculiar Juices of Plants; on the Action of Light and Heat on Plants; on the Naturalization of Plants; on the Action of the Atmosphere on Plants; on the Action of Water on Plants; on the Artificial Mode of Watering Plants; on the Action of the Soil on Plants; on the Propagation of Plants by Subdivision; on Grafting; on the Multiplication of Plants by Seed; the Flower; on Compound Flowers; on Fruit;

on the Seed; on the Classification of Plants; on Artificial Systems; on the Natural System; Botanical Geography; the Influence of Culture on Vegetation; on the Degeneration and Diseases of Plants; on the Cultivation of Trees; on the Cultivation of Plants which Produce Fermented Liquors; on the Cultivation of Grasses, Tuberous Roots, and Grain; on Oleaginous Plants and Culinary Vegetables.

MARCET.—CONVERSATIONS FOR CHILDREN;

On Land and Water. 2d Edition (1839), revised and corrected, 1 vol. foolscap 8vo. pp. 256, with coloured Maps, shewing the comparative Altitude of Mountains, 5s. 6d. cloth.

MARCET.—THE GAME OF GRAMMAR,

With a Book of Conversations (fcp. 8vo. pp. 54, 1842), shewing the Rules of the Game, and affording Examples of the manner of playing at it. In a varnished box, or done up as a post 8vo. volume in cloth, 8s.

MARCET.—MARY'S GRAMMAR;

Interspersed with Stories, and intended for the Use of Children. 6th Edition (1842), revised and enlarged, 18mo. pp. 336, 3s. 6d. half-bound.

MARCET.—JOHN HOPKINS' NOTIONS ON POLITICAL ECONOMY.

3d Edition (1834), foolscap 8vo. pp. 194, 4s. 6d. cloth.

. *A smaller Edition (the Second, 1833) 18mo. pp. 176, 1s. 6d. sewed.*

MARCET.—WILLY'S HOLIDAYS;

Or, Conversations on Different Kinds of Governments, intended for Young Children. 18mo. pp. 158 (1836), 2s. half-bound.

MARCET.—WILLY'S STORIES FOR YOUNG CHILDREN.

Third Edition (1839), 18mo. pp. 138, 2s. half-bound.

The House-building: the Three Pits (the Coal Pit, the Chalk Pit, and the Gravel Pit): and the Land without Laws.

MARCET.—THE SEASONS;

Stories for very Young Children. 4 vols. 18mo. new Editions: Vol. 1, Winter, 3d Edition, pp. 180 (1839); Vol. 2, Spring, 3d Edition, pp. 196 (1839); Vol. 3, Summer, 3d Edition, pp. 178 (1840); Vol. 4, Autumn, 3d Edition, pp. 184 (1840). 2s. each volume, half-bound.

MARRIAGE GIFT.

By a Mother. A Legacy to her Children. Post 8vo. 5s. cloth, gilt edges.

MARRYAT.—NARRATIVE OF THE TRAVELS AND ADVENTURES OF

MONSIEUR VIOLET, in California, Sonora, and Western Texas. Written by Captain Marryat, C.B. 3 vols. post 8vo. 3ls. 6d. boards.

MARRYAT.—MASTERMAN READY;

Or, the Wreck of the Pacific. Written for Young People. By Captain Marryat. 3 Vols. foolscap 8vo. with numerous Engravings on Wood, 22s. 6d. cloth.

. *The volumes, separately, 7s. 6d. each, cloth.*

MARTINGALE.—SPORTING SCENES AND COUNTRY CHARACTERS.

By Martingale. 1 vol. square crown 8vo. beautifully embellished with Wood Engravings in the highest style of the Art, 1l. 1s. handsomely bound in a new style.

MAUNDER.—THE TREASURY OF KNOWLEDGE,

And LIBRARY of REFERENCE: containing a new and enlarged Dictionary of the English Language, preceded by a Compendious Grammar, Verbal Distinctions, etc.; a new Universal Gazetteer; a Compendious Classical Dictionary; a Chronological Analysis of General History; a Dictionary of Law Terms, etc. etc. By Samuel Maunder. 14th Edition, 1 vol. foolscap 8vo. pp. 810, with two engraved Frontispieces, 8s. 6d. cloth; or handsomely bound in roan, lettered, with gilt edges, 10s. 6d.

MAUNDER.—THE SCIENTIFIC AND LITERARY TREASURY:

A New and Popular Encyclopædia of Science and the Belles Lettres; including all Branches of Science, and every Subject connected with Literature and Art. The whole written in a familiar style, adapted to the comprehension of all persons desirous of acquiring information on the subjects comprised in the work, and also adapted for a Manual of convenient Reference to the more instructed. By Samuel Maunder. 2d Edition, 1 thick vol. fcap. 8vo. of 1700 closely-printed columns, pp. 840, with an engraved Frontispiece, 10s.; handsomely bound in fancy cloth, lettered; or bound in roan, gilt edges, 12s.

MAUNDER.—THE BIOGRAPHICAL TREASURY:

Consisting of Memoirs, Sketches, and brief Notices of above 12,000 Eminent Persons of all Ages and Nations, from the Earliest Period of History; forming a new and complete Dictionary of Universal Biography. 4th Edition, with a "Supplement," from the Accession of Queen Victoria to the Present time. 1 vol. foolscap 8vo. pp. 876, with engraved Frontispiece, 8s. 6d. cloth; or roan, gilt edges, 10s. 6d.

MAUNDER.—THE TREASURY OF HISTORY;

Comprising a General Introductory Outline of Universal History, Ancient and Modern, and a Series of separate Histories of every principal Nation that exists; developing their Rise, Progress, and Present Condition, the Moral and Social Character of their respective Inhabitants, their Religion, Manners, and Customs, etc. etc. By Samuel Maunder.

In the press.

M'CULLOCH.—THE PRINCIPLES OF POLITICAL ECONOMY:

With some Enquiries respecting their Application, and a Sketch of the Rise and Progress of the Science. By J. R. M'Culloch, Esq. New Edition, enlarged and corrected throughout, 8vo. 15s.

M'CULLOCH.—A DICTIONARY, GEOGRAPHICAL, STATISTICAL, AND

HISTORICAL, of the various Countries, Places, and Principal Natural Objects in the World. By J. R. M'Culloch, Esq. 2 thick vols. 8vo. pp. 1980, 4l. bound in cloth. Illustrated with Six large important Maps as follows:—

1. The World, on Mercator's Projection; with enlarged scales introduced of Canton River, Van Diemen's Land, Hooghly River, Island and Town of Singapore, and Colony of Good Hope.
2. Asia on a very extensive scale, embracing every recent Survey (*coloured*).
3. Great Britain and Ireland, their Navigable Rivers, and completed and proposed Railways; with Dublin Bay, Caledonian Canal, and the Thames, introduced on an enlarged scale.
4. The British Possessions in North America, with part of the United States, compiled from official sources; with Plans of the Cities and Harbours of Montreal and the Island of Newfoundland, introduced on an enlarged scale.
5. Central and Southern Europe, with the Mediterranean Sea; the Mouth of the Schelde, introduced on an extended scale.
6. Central America and the West Indies, from the latest and best authorities; with the Island of Jamaica, the Harbours of Port Royal and Kingston, and the Harbour and City of Havana, introduced on an enlarged scale.

"The extent of information this Dictionary affords on the subjects referred to in its title is truly surprising. It cannot fail to prove a *vade-mecum* to the student, whose inquiries will be guided by its light, and satisfied by its clear and frequently elaborated communications. Every public room in which commerce, politics, or literature forms the subject of discussion, ought to be furnished with these volumes."—*Globe*.

M'CULLOCH.—A DICTIONARY, PRACTICAL, THEORETICAL, AND

HISTORICAL, of COMMERCE and COMMERCIAL NAVIGATION. Illustrated with Maps and Plans. By J. R. M'Culloch, Esq. A New Edition, with a new and enlarged Supplement, containing the New Tariff, the New Corn Law (with an Article on the latter), and bringing down the information in the work to September 1842. In one closely and beautifully-printed vol. 8vo. of more than 1350 pages, 2l. 10s. boards.

*. * The New Supplement *separately*, 5s. sewed.

MEREDITH,

By the Countess of Blessington. 3 vols. post 8vo. 31s. 6d. boards.

"As an accurate and brilliant delineator of the traits and foibles of fashionable life, Lady Blessington is unequalled. She draws with a steady yet delicate hand the denizens of le beau monde, justly discriminating the various shades of character she has to deal with; and presents, at last, a lively picture, replete with striking contrast, yet exquisitely natural, of which we admire the execution whilst we acknowledge the truth."—*Court Journal*.

MILNE.—TREATISE ON THE VALUATION OF ANNUITIES & ASSURANCES

ON LIVES OR SURVIVORSHIPS; on the Construction of Tables of Mortality; and on the Probabilities and Expectations of Life. Wherein the Laws of Mortality that prevail in different parts of Europe are determined, and the Comparative Mortality of different Diseases and of the Two Sexes are shown; with a variety of Tables. By Joshua Milne, Actuary to the Sun Life Assurance Society. 2 vols. 8vo. 1*l.* 10*s.* boards.

MILTON'S L'ALLEGRO AND IL PENSEROSO,

With Illustrations by Members of the Etching Club. Imp. 8vo.—(*In preparation.*)

MONTGOMERY'S (JAMES) POETICAL WORKS.

New and complete Edition (1841). With some additional Poems and Autobiographical Prefaces. Collected and edited by Mr. Montgomery. 4 vols. foolscap 8vo. with Portrait, and 7 other beautifully engraved Plates, 20*s.* cloth; or bound in morocco, with gilt edges, 1*l.* 16*s.*

MOORE'S (THOMAS) POETICAL WORKS.

First and only complete Edition (1841). Edited by Mr. Moore. With Autobiographical Prefaces. 10 vols. foolscap 8vo. with Portrait, and 19 other highly-finished Plates, 2*l.* 10*s.* fancy cloth; or 4*l.* 10*s.* handsomely bound in morocco, with gilt edges.

MOORE'S POETICAL WORKS;

Containing the Author's recent Introduction and Notes. Complete in one volume, uniform with Lord Byron's Poems. With a New Portrait, by George Richmond, engraved in the line manner, and a View of Sloperton Cottage, the Residence of the Poet, by Thomas Creswick, A.R.A. Medium 8vo. 1*l.* 1*s.* cloth.

MOORE'S LALLA ROOKH.

Twentieth Edition (1842), 1 vol. medium 8vo. beautifully illustrated with 13 Engravings, finished in the highest style of art, 21*s.* handsomely bound in cloth and ornamented; morocco, 35*s.*; or 42*s.* with India Proof Plates, in cloth.

MOORE'S LALLA ROOKH.

Twenty-first Edition (1842), 1 vol. foolscap 8vo. with 4 Engravings, from Paintings by Westall, 10*s.* 6*d.* cloth; or 14*s.* handsomely bound in morocco, with gilt edges.

MOORE'S IRISH MELODIES.

New Edition, imp. 8vo. illustrated with above 50 Designs by MacIse, etched on Steel, 2*l.* 2*s.*; Proofs on India Paper, 4*l.* 4*s.*; before letters (of Illustrations only), 6*l.* 6*s.*—*Nearly ready.*

The Poetry and Designs will both be engraved, and each page surrounded with an Ornamental Border.

MOORE'S IRISH MELODIES.

Fifteenth Edition (1843), with Engraved Title and Vignette, 10*s.* cloth lettered; or 13*s.* 6*d.* handsomely bound in morocco, with gilt edges.

MOORE.—THE HISTORY OF IRELAND.

By Thomas Moore, Esq. Vols. 1 to 3, with Vignette Titles, 18*s.* cloth.

MORAL OF FLOWERS.

3d Edition, 1 vol. royal 8vo. with 24 beautifully coloured Engravings, 1*l.* 10*s.* half-bound.

MORGAN.—THE PRINCIPLES & DOCTRINE OF ASSURANCES, ANNUITIES

ON LIVES, and CONTINGENT REVERSIONS, Stated and Explained. By W. Morgan, F.R.S., Actuary to the Society for Equitable Assurances on Lives, etc. 8vo. 12*s.* boards.

MORTON.—A VETERINARY TOXICOLOGICAL CHART,

Containing those Agents known to cause Death in the Horse; with the Symptoms, Antidotes, Action on the Tissues, and Tests. By W. J. T. Morton. 12mo. 6*s.* in case; 8*s.* 6*d.* on rollers.

MORTON.—A MANUAL OF PHARMACY,

For the Student in Veterinary Medicine; containing the Substances employed at the Royal Veterinary College, with an Attempt at their Classification, and the Pharmacopœia of that Institution. By W. J. T. Morton. 2d Edition, 12mo. pp. 304, 9*s.* cloth.

MOSELEY.—ILLUSTRATIONS OF PRACTICAL MECHANICS.

By the Rev. H. Moseley, M.A., Professor of Natural Philosophy and Astronomy in King's College, London; being the First Volume of the Illustrations of Science by the Professors of King's College. 1 vol. fcap. 8vo. with numerous Woodcuts, 8*s.* cloth.

MOSELEY.—THE MECHANICAL PRINCIPLES OF ENGINEERING AND ARCHITECTURE.

By the Rev. H. Moseley, M.A. F.R.S., Professor of Natural Philosophy and Astronomy in King's College, London; and author of "Illustrations of Mechanics," etc. 1 vol. 8vo. with Woodcuts and Diagrams, 1*l.* 4*s.* cloth.

"This volume includes the substance of a course of lectures delivered to the students of King's College, in the departments of engineering and architecture, during the present and two preceding years (1840-42). The first part treats of statics, so far as that science applies to the subject; the second of dynamics; the third of the theory of machines; the fourth of the theory of the stability of structures; the fifth of the strength of materials; and the sixth and last of 'impact.' We have merely noted the divisions of this body of mathematical science for the information of those to whom the high reputation of Professor Moseley will be a sufficient warranty."—Spectator.

"The work of Mr. Moseley is an elaborate, profound, accurate, and elegant abstract, and purely mathematical disquisition, on the theoretical principles of mechanics; and will serve to increase the author's high reputation as a mathematician."—Athenæum.

MURRAY.—ENCYCLOPÆDIA OF GEOGRAPHY;

Comprising a complete Description of the Earth: exhibiting its Relation to the Heavenly Bodies, its Physical Structure, the Natural History of each Country, and the Industry, Commerce, Political Institutions, and Civil and Social State of all Nations. By Hugh Murray, F.R.S.E.: assisted in Astronomy, etc. by Professor Wallace; Geology, etc. by Professor Jameson; Botany, etc. by Sir W. J. Hooker; Zoology, etc. by W. Swainson, Esq. New Edition, brought down to 1840: with 82 Maps, drawn by Sidney Hall, and upwards of 1000 other Engravings on Wood, from Drawings by Swainson, T. Landseer, Sowerby, Strutt, etc. representing the most remarkable Objects of Nature and Art in every Region of the Globe. 1 vol. 8vo. containing upwards of 1500 pages, 3l. cloth.

NARRIEN.—ELEMENTS OF GEOMETRY;

Consisting of the first Four and Sixth Books of Euclid, chiefly from the Text of Dr. Robert Simpson: with the principal Theorems in Proportion, and a course of Practical Geometry on the Ground; also, Four Tracts relating to Circles, Planes and Solids, with one on Spherical Geometry. By Mr. Narrien, Professor of Mathematics in the Royal Military College, Sandhurst. 8vo. pp. 288, with many Diagrams, 10s. 6d. bound.

NICOLAS.—THE CHRONOLOGY OF HISTORY

Containing Tables, Calculations, and Statements indispensable for ascertaining the Dates of Historical Events, and of Public and Private Documents, from the Earliest Period to the Present Time. By Sir Harris Nicolas, K.C. M.G. Second Edition, corrected throughout. 1 vol. foolscap 8vo. with Vignette Title, 6s. cloth.

"We strongly recommend to historical students the clear and accurate 'Chronology of History,' by Sir Harris Nicolas, which contains all the information that can be practically required."—Quarterly Review, No. 142.

O'SULLIVAN.—OF THE APOSTACY PREDICTED BY ST. PAUL.

By the Rev. Mortimer O'Sullivan, D.D. Rector of Killyman. 8vo. pp. 596, 14s. cloth.

OWEN.—LECTURES ON THE COMPARATIVE ANATOMY AND PHYSIOLOGY OF THE INVERTEBRATE ANIMALS,

delivered at the Royal College of Surgeons in 1843. By Richard Owen, F.R.S. Hunterian Professor to the College. From Notes taken by William White Cooper, M.R.C.S. and revised by Professor Owen. With Glossary and Index. 8vo. with nearly 140 Illustrations on Wood, 14s. cloth.

"It is sufficient to announce a work on the comparative anatomy of the Invertebrata by Mr. Owen. Were it necessary to recommend it, we should say, that the desideratum it supplies has been long felt by students of natural history; and that no writer of the present day, except Mr. Owen, could have ventured to approach the subject: his enlightened researches having made the delightful department of science in which he has created his brilliant reputation legitimately his own; and, indeed, organised into a system an interesting branch of knowledge, in which he found only a few scattered and imperfectly known facts."

Medical Gazette.

PARKES.—DOMESTIC DUTIES;

Or, Instructions to Young Married Ladies on the Management of their Households and the Regulation of their Conduct in the various Relations and Duties of Married Life. By Mrs. W. Parkes. 5th Edition, foolscap 8vo. 9s. cloth.

Social Relations—Household Concerns—the Regulation of Time—Moral and Religious Duties.

PARNELL.—A TREATISE ON ROADS;

Wherein the Principles on which Roads should be made are explained and illustrated by the Plans, Specifications, and Contracts made use of by Thomas Telford, Esq. on the Holyhead Road. By the Right Hon. Sir Henry Parnell, Bart., Hon. Memb. Inst. Civ. Eng. London. Second Edition, greatly enlarged, with 9 large Plates, 1l. 1s. cloth.

PEARSON.—PRAYERS FOR FAMILIES:

Consisting of a Form, short, but comprehensive, for the Morning and Evening of every day in the week. Selected by the late E. Pearson, D.D., Master of Sidney Sussex College, Cambridge. To which is prefixed, a Biographical Memoir of the Editor. New Edit. 18mo. 2s. 6d. cloth.

PEARSON.—AN INTRODUCTION TO PRACTICAL ASTRONOMY:

By the Rev. W. Pearson, LL.D. F.R.S. etc. Rector of South Kilworth, Leicestershire, and Treasurer to the Astronomical Society of London. 2 vols. 4to. with Plates, 7l. 7s. boards. Vol. 1 contains Tables, recently computed, for facilitating the Reduction of Celestial Observations; and a popular Explanation of their Construction and Use. Vol. 2 contains Descriptions of the various Instruments that have been usefully employed in determining the Places of the Heavenly Bodies, with an Account of the Methods of Adjusting and Using them.

PERCIVALL.—THE ANATOMY OF THE HORSE;

Embracing the Structure of the Foot. By W. Percivall, M.R.C.S. 8vo. pp. 478, 1l. cloth.

PERCIVALL.—HIPPOPATHOLOGY;

A Systematic Treatise on the Disorders and Lameness of the Horse; with their Modern and most approved Methods of Cure; embracing the Doctrines of the English and French Veterinary Schools. By W. Percivall, M.R.C.S., Veterinary Surgeon in the First Life Guards. Vol. 1, 8vo. pp. 340, 10s. 6d. boards; vol. 2, 8vo. pp. 436, 14s. boards.

PEREIRA.—A TREATISE ON FOOD AND DIET:

With Observations on the Dietetical Regimen suited for Disordered States of the Digestive Organs; and an Account of the Dietaries of some of the principal Metropolitan and other Establishments for Paupers, Lunatics, Criminals, Children, the Sick, etc. By Jon. Pereira, M.D. F.R.S., author of "Elements of Materia Medica." 8vo. 16s. cloth.

"*Dr. Pereira's book contains such an exposition of the entire subject of alimentary substances and diet as must be alike acceptable to the professional student and improving to the general reader. The chapter on Dietaries—a most important subject ably treated—has a present and vital interest.*"—Tait's Magazine.

"*The most complete and informing work on the subject which has been yet presented to the public. We urge every one to read it with attention, as the production of a medical philosopher, and one of the first physicians of the age.*"—Atlas.

PHILLIPS.—AN ELEMENTARY INTRODUCTION TO MINERALOGY:

Comprising a Notice of the Characters and Elements of Minerals; with Accounts of the Places and Circumstances in which they are found. By William Phillips, F.L.S. M.G.S. etc. 4th Edition, considerably augmented by R. Allan, F.R.S.E. 8vo. numerous Cuts, 12s. cloth.

PHILLIPS.—FIGURES & DESCRIPTIONS OF THE PALÆOZOIC FOSSILS OF CORNWALL, DEVON, and WEST SOMERSET; observed in the course of the Ordnance Geological Survey of that District. By John Phillips, F.R.S. F.G.S. etc. Published by Order of the Lords Commissioners of H. M. Treasury. 8vo. with 60 Plates, comprising very numerous Figures, 9s. cloth.

PHILLIPS.—A GUIDE TO GEOLOGY.

By John Phillips, F.R.S. G.S. etc. 1 vol. foolscap 8vo. with Plates, 5s. cloth.

PHILLIPS.—A TREATISE ON GEOLOGY.

By John Phillips, F.R.S. G.S. etc. 2 vols. foolscap 8vo. with Vignette Titles and Woodcuts. 12s. cloth.

POISSON.—A TREATISE ON MECHANICS.

By S. D. Poisson. 2d Edition. Translated from the French, and illustrated with Explanatory Notes, by the Rev. Henry H. Harte, late Fellow of Trinity College, Dublin. 2 large vols. 8vo. 28s. boards.

PORTER.—A TREATISE ON THE MANUFACTURE OF SILK.

By G. R. Porter, Esq. F.R.S., author of "The Progress of the Nation," etc. 1 vol. 8vo. with Vignette Title, and 39 Engravings on Wood, 6s. cloth.

PORTER.—A TREATISE ON THE MANUFACTURES OF PORCELAIN AND GLASS. By G. R. Porter, Esq. F.R.S. 1 vol. foolscap 8vo. with Vignette Title and 50 Woodcuts, 6s. cloth.

PORTLOCK.—REPORT ON THE GEOLOGY OF THE COUNTY OF LONDONDERRY, and of Parts of Tyrone and Fermanagh, examined and described under the Authority of the Master-General and Board of Ordnance. By J. E. Portlock, F.R.S. etc. 8vo. with 48 Plates, 24s. cloth.

POSTAN'S (CAPTAIN).—PERSONAL OBSERVATIONS ON SINDH.

The Manners and Customs of its Inhabitants, and its Productive Capabilities: with a Narrative of the Recent Events. By Captain Postans, Bombay Army, late Assistant to the Political Agent, Sindh. 8vo. with Map, col'd Frontispiece, and Illustrations on Wood. 18s. cloth.

"*Capt. Postans writes pleasantly, and is a firm and calm recorder of what he has seen and known—an honest and deliberate reporter of the conclusions he has come to on a subject that has points about which men are much divided. He has studied his theme in its various branches vigilantly and patiently, and has bestowed reflection and exemplary care before delivering the results of his observation and research. His work, indeed, we cannot doubt, will become an authority upon various points of Indian policy even beyond the interests that are immediately combined with the Sindhian nation.*"—Monthly Review.

POWELL.—THE HISTORY OF NATURAL PHILOSOPHY.

From the Earliest Periods to the Present Time. By Baden Powell, M. A., Savilian Professor of Mathematics in the University of Oxford. 1 vol. fcap. 8vo. Vignette Title, 6s. cloth.

PROCEEDINGS OF THE ZOOLOGICAL SOCIETY OF LONDON.

8vo. The last Part published is Part 9 for 1841, 6s. cloth.

REECE.—THE MEDICAL GUIDE:

For the use of the Clergy, Heads of Families, Seminaries, and Junior Practitioners in Medicine; comprising a complete Modern Dispensatory and a Practical Treatise on the distinguishing Symptoms, Causes, Prevention, Cure, and Palliation of the Diseases incident to the Human Frame. By R. Reece, M.D., late Fellow of the Royal College of Surgeons of London, etc. 16th Edition, 8vo. pp. 600, 12s. boards.

REEVE.—CONCHOLOGIA SYSTEMATICA:

Or, Complete System of Conchology: in which the Lepades and Mollusca are described and classified according to their Natural Organization and Habits: illustrated with 300 highly finished copper-plate Engravings, by Messrs. Sowerby, containing above 1500 figures of Shells. By L. Reeve, F.L.S. etc.

Vol. 1, containing the Lepades and Bivalve Mollusca, with 130 Plates, 3l. 5s. cloth: with coloured Plates, 5l. 10s. cloth.

Vol. 2, the "Univalve Mollusca," with 171 Plates, 4l. 9s. cloth; coloured, 7l. 12s. cloth.

REPTON.—THE LANDSCAPE GARDENING & LANDSCAPE ARCHITECTURE

of the late Humphrey Repton, Esq.; being his entire Works on these subjects. New Edition, with an Historical and Scientific Introduction, a systematic Analysis, a Biographical Notice, Notes, and a copious Alphabetical Index. By J. C. Loudon, F.L.S., etc. Originally published in one folio and three quarto volumes, and now comprised in 1 vol. 8vo. illustrated by upwards of 250 Engravings, and Portrait, 30s. cloth; with coloured Plates, 3l. 6s. cloth.

RICHARDSON.—GEOLOGY FOR BEGINNERS:

Comprising a Familiar Explanation of Geology, and its associate Sciences, Mineralogy, Physical Geology, Fossil Conchology, Fossil Botany, and Palæontology, including Directions for forming Collections and generally cultivating the Science; with a succinct Account of the several Geological Formations. By G. F. Richardson, F.G.S. of the British Museum. 2d Edition, considerably enlarged, with new Frontispiece, and nearly 100 new Wood Engravings, fcp. 8vo. 10s. 6d. cloth.

"The student of Geology is here supplied with the means of acquiring the rudiments of this interesting science. Mr. Richardson has succeeded in simplifying his descriptions, and investing his explanations with interest, to an extent unequaled in any work of the kind with which we have had the good fortune to meet. He thus fixes the attention, and gradually acquires the confidence of the student, who becomes sensible that he is making progress in the study by the increasing pleasure which he feels at every successive step. The scientific reputation acquired by the author—the facilities afforded by his official position, as Curator of the Geological department of the British Museum—and the rapidity with which the first edition of the work has been sold, render any further recommendation of the book unnecessary. It will, we doubt not, become the work with which the student of geology will commence. When its contents are understood, they will materially aid his progress in proceeding to master the arcana of the science, which, when acquired, will amply reward whatever pains he has taken in the acquisition of its mysteries."—Globe, Sept. 8, 1843.

RIDDLE.—A DIAMOND LATIN ENGLISH DICTIONARY.

For the waistcoat-pocket. A Guide to the Meaning, Quality, and right Accentuation of Latin Classical Words. By the Rev. J. E. Riddle, M.A. Royal 32mo. 4s. bound.

"A most useful little lexicon to the general reader who may wish for an accommodating interpreter of such Latin words or sentences as may be encountered in every day's casual literary exercises. It is at once copious and succinct."—Morning Herald.

RIDDLE.—LETTERS FROM AN ABSENT GODFATHER;

Or, a Compendium of Religious Instruction for Young Persons. By the Rev. J. E. Riddle, M.A. Foolscap 8vo. 6s. cloth.

RIDDLE.—ECCLESIASTICAL CHRONOLOGY;

Or, Annals of the Christian Church, from its Foundation to the present Time. Containing a View of General Church History, and the Course of Secular Events; the Limits of the Church and its Relations to the State; Controversies; Sects and Parties; Rites, Institutions, and Discipline; Ecclesiastical Writers. The whole arranged according to the order of Dates, and divided into Seven Periods. To which are added, Lists of Councils and Popes, Patriarchs, and Archbishops of Canterbury. By the Rev. J. E. Riddle, M.A., author of "The Complete Latin Dictionary." 1 vol. 8vo. 15s. cloth.

RIVERS.—THE ROSE AMATEUR'S GUIDE:

Containing ample Descriptions of all the fine leading Varieties of Roses, regularly classed in their respective Families; their History and Mode of Culture. By T. Rivers, Jun. 2d Edit. with Alterations and Additions. 1 vol. foolscap 8vo. 6s. cloth.

Among the additions to the present Edition will be found full Directions for Raising New Roses from Seed, by modes never before published, appended to each Family; with Descriptions of the most remarkable New Roses lately introduced; and an Alphabetical List of all the New Roses and Show Flowers.

ROBERTS.—A COMPREHENSIVE VIEW OF THE CULTURE OF THE VINE

under GLASS. By James Roberts, Gardener to M. Wilson, Esq., Eshton, Hall, Yorkshire. 12mo. 5s. 6d. cloth.

ROBERTS.—AN ETYMOLOGICAL AND EXPLANATORY DICTIONARY OF

the TERMS and LANGUAGE of GEOLOGY; designed for the early Student, and those who have not made great progress in the Science. By G. Roberts. Foolscap 8vo. 6s. cloth.

ROBINSON.—GREEK AND ENGLISH LEXICON TO THE NEW TESTAMENT.

By E. Robinson, D.D., author of "Biblical Researches." Edited, with careful revision, corrections, etc., by the Rev. Dr. Bloomfield. 1 vol. 8vo. 18s. cloth.

ROGERS.—THE VEGETABLE CULTIVATOR;

Containing a plain and accurate Description of all the different Species of Culinary Vegetables, with the most approved Method of Cultivating them by Natural and Artificial Means, and the best Modes of Cooking them; alphabetically arranged. Together with a Description of the Physical Herbs in General Use. Also, some Recollections of the Life of Philip Miller, F.A.S., Gardener to the Worshipful Company of Apothecaries at Chelsea. By John Rogers, author of "The Fruit Cultivator." Foolscap 8vo. 7s. cloth.

ROME.—THE HISTORY OF ROME.

2 vols. foolscap 8vo. with Vignette Titles, 12s. cloth.

RONALDS.—THE FLY-FISHER'S ENTOMOLOGY,

Illustrated by coloured Representations of the Natural and Artificial Insect; and accompanied by a few Observations and Instructions relative to Trout and Grayling Fishing. By Alfred Ronalds. 2d edition, with 20 Copper Plates, coloured, 8vo. 14s. cloth.

ROSCOE.—LIVES OF EMINENT BRITISH LAWYERS.

By Henry Roscoe, Esq. 1 vol. foolscap 8vo. with Vignette Title, 6s. cloth.

SANDFORD.—WOMAN IN HER SOCIAL AND DOMESTIC CHARACTER.

By Mrs. John Sandford. 6th Edition, foolscap 8vo. 6s. cloth.

Causes of Female Influence; Value of Letters to Woman; Importance of Religion to Woman; Christianity the Source of Female Excellence; Scripture illustrative of Female Character; Female Influence on Religion; Female Defects; Female Romance; Female Education; Female Duties.

SANDFORD.—FEMALE IMPROVEMENT.

By Mrs. John Sandford. 2d Edition, foolscap 8vo. 7s. 6d. cloth.

The Formation of Female Character; Religion, a paramount Object; the Importance of Religious Knowledge; Christianity, Doctrinal and Practical; the Employment of Time; Study, its Mode and its Recommendation; Accomplishment; Temper; Taste; Benevolence; Marriage; the Young Wife; the Young Mother.

SANDFORD.—LIVES OF ENGLISH FEMALE WORTHIES.

By Mrs. John Sandford. Vol. 1, containing the Lives of Lady Jane Grey and Mrs. Colonel Hutchinson, foolscap 8vo. 6s. 6d. cloth.

SAVAGE.—A DICTIONARY OF PRINTING.

By William Savage, author of "Practical Hints on Decorative Printing," and a Treatise "On the Preparation of Printing Ink, both Black and Coloured." In 1 vol. 8vo. with numerous Diagrams, 1l. 6s. cloth.

SCOTT.—THE HISTORY OF SCOTLAND.

By Sir Walter Scott, Bart. New Edition, 2 vols. foolscap 8vo. with Vignette Titles, 12s. cloth.

SEAWARD.—SIR EDWARD SEAWARD'S NARRATIVE OF HIS SHIPWRECK,

And consequent Discovery of certain Islands in the Caribbean Sea: with a Detail of many extraordinary and highly interesting Events in his Life, from 1733 to 1749, as written in his own Diary. Edited by Miss Jane Porter. 3d Edition, with a New Nautical and Geographical Introduction, containing Extracts from a Paper by Mr. C. F. Collett, of the Royal Navy, identifying the Islands described by Sir Edward Seaward. 2 vols. post 8vo. 21s. cloth.

SELECT WORKS OF THE BRITISH POETS:

From Chaucer to Withers. With Biographical Sketches, by R. Southey, LL.D. 1 vol. 8vo. 30s. cloth; or 31s. 6d. with gilt edges.

SELECT WORKS OF THE BRITISH POETS:

From Ben Jonson to Beattie. With Biographical and Critical Prefaces by Dr. Aikin. 1 vol. 8vo. 18s. cloth; or 20s. with gilt edges.

* * * *The peculiar feature of these two works is, that the Poems included are printed entire, without mutilation or abridgment; care being taken that such poems only are included as are fit for the perusal of youth, or for reading aloud.*

SHAKSPEARE, BY BOWDLER.

THE FAMILY SHAKSPEARE, in which nothing is added to the Original Text; but those Words and Expressions are omitted which cannot with propriety be read aloud. By T. Bowdler, Esq. F.R.S. Seventh Edition (1839), 1 large vol. 8vo. with 36 Illustrations after Smirke, etc. 30s. cloth; or 31s. 6d. gilt edges.

* * * A LIBRARY EDITION of this work, without Illustrations, 8 vols. 8vo. 4l. 14s. 6d. boards.

SHELLEY, ETC.—LIVES OF THE MOST EMINENT LITERARY MEN OF ITALY, SPAIN and PORTUGAL.

By Mrs. Shelley, Sir D. Brewster, J. Montgomery, etc. 3 vols. foolscap 8vo. with Vignette Titles, 18s. cloth.

SHELLEY.—LIVES OF THE MOST EMINENT FRENCH WRITERS.

By Mrs. Shelley and others. 2 vols. foolscap 8vo. with Vignette Titles, 12s. cloth.

SHORT WHIST:

Its Rise, Progress, and Laws; with Observations to make any one a Whist Player; containing also the Laws of Piquet, Cassino, Ecarte, Cribbage, Backgammon. By Major A * * * *. 7th Edition. To which are added, Precepts for Tyros. By Mrs. B * * * *. Foolscap 8vo. 3s. cloth, gilt edges.

SISMONDI.—THE HISTORY OF THE ITALIAN REPUBLICS;

Or, of the Origin, Progress, and Fall of Freedom in Italy, from A.D. 476 to 1805. By J. C. L. De Sismondi. 1 vol. foolscap 8vo. with Vignette Title, 6s. cloth.

SISMONDI.—THE HISTORY OF THE FALL OF THE ROMAN EMPIRE.

Comprising a View of the Invasion and Settlement of the Barbarians. By J. C. L. De Sismondi. 2 vols. foolscap 8vo. with Vignette Titles, 12s. cloth.

SMITH.—AN INTRODUCTION TO THE STUDY OF BOTANY.

By Sir J. E. Smith, late President of the Linnæan Society. 7th Edition (1833), corrected; in which the object of Smith's "Grammar of Botany" is combined with that of the "Introduction." By Sir William Jackson Hooker, K.H. LL.D. etc. 1 vol. 8vo. pp. 522, with 36 Steel Plates, 16s. cloth; coloured Plates, 2l. 12s. 6d. cloth.

SMITH.—THE ENGLISH FLORA.

By Sir James Edward Smith, M.D. F.R.S., late President of the Linnæan Society, etc. 6 vols. 8vo. 3l. 12s. boards.

CONTENTS:

Vols. I. to IV. the Flowering Plants and the Ferns, 2l. 8s.

Vol. V. Part 1, 12s.—Cryptogamia; comprising the Mosses, Hepaticæ, Lichens, Characæ, and Algæ. By Sir W. J. Hooker.

Vol. V. Part 2, 12s.—The Fungi—completing the work, by Sir W. J. Hooker, and the Rev. M. J. Berkeley, F.L.S. etc.

SMITH.—THE WORKS OF THE REV. SYDNEY SMITH.

2d Edition, 3 vols. 8vo. with Portrait, pp. 1412, 36s. cloth.

* * * This collection consists of the Author's contributions to the "Edinburgh Review," Peter Plymley's "Letters on the Catholics," and other miscellaneous works.

SMITH.—LETTERS ON THE SUBJECT OF THE CATHOLICS,

To my BROTHER ABRAHAM who lives in the COUNTRY. By Peter Plymley. 21st Edition, post 8vo. pp. 200, 7s. cloth.

SMITH.—THE MEMOIRS OF THE MARQUIS DE POMBAL.

By John Smith, Private Secretary to the Marquis de Saldana. 2 vols. 8vo. with Portrait and Autograph, 2l. cloth.

These Memoirs of this illustrious Portuguese Statesman, designated by his countrymen the "Great Marquis," contain details of the terrible earthquake in 1755—The energy of Pombal on that awful occasion—The establishment of the Oporto Wine Company—The Duke of Aveiro's conspiracy—Rupture with the Court of Rome—Strange hallucinations of the Jesuit Malagrida—Suppression of the Jesuit order throughout Europe effected by Pombal's energy and address—Family compact, and war with France and Spain—Extensive reforms and flourishing condition of Portugal—Death of the king—Pombal's resignation, examination, sentence, illness, and death. The whole interspersed with extracts from the despatches of Mr. Hay, Lord Kinroull, Mr. Walpole, etc. never before published.

SMITH.—AN INQUIRY INTO THE NATURE AND CAUSES OF THE WEALTH

OF NATIONS. By Adam Smith, LL.D. With a Life of the Author, an Introductory Discourse, Notes, and Supplemental Dissertation. By J. R. McCulloch. New Edition, corrected throughout, and greatly enlarged, 8vo. with Portrait, 1l. 1s. cloth.

SOUTHEY'S (ROBERT) POETICAL WORKS.

First and only complete Edition (1833-42). Collected and edited by Mr. Southey. With Autobiographical Prefaces. 10 vols. foolscap 8vo. with Portrait, and 19 other highly-finished Plates, 2l. 10s. fancy cloth; or 4l. 10s. handsomely bound in morocco, with gilt edges.

The following may be had, bound separately, in cloth lettered:—

JOAN OF ARC - - - - -	1 vol. 5s.	THALABA - - - - -	1 vol. 5s.
MADOC - - - - -	1 vol. 5s.	BALLADS, etc. - - - - -	2 vols. 10s.
CURSE OF KEHAMA - - - - -	1 vol. 5s.	RODERICK - - - - -	1 vol. 5s.

SOUTHEY, ETC.—LIVES OF THE BRITISH ADMIRALS;

With an Introductory View of the Naval History of England. By R. Southey, Esq. and R. Bell, Esq. 5 vols. foolscap 8vo., with Vignette Titles, 1l. 10s. cloth.

SPACKMAN.—STATISTICAL TABLES

Of the Agriculture, Shipping, Colonies, Manufactures, Commerce, and Population of the United Kingdom of Great Britain and its Dependencies, brought down to the year 1843. Compiled from Official Returns. By W. F. Spackman, Esq. Fcap. 8vo. pp. 162, 5s. cloth.

SPIRIT OF THE WOODS.

By the author of "The Moral of Flowers." 2d Edition, 1 vol. royal 8vo. with 23 beautifully coloured Engravings of the Forest Trees of Great Britain, 1l. 11s. 6d. cloth.

SPOONER.—A TREATISE ON THE INFLUENZA OF HORSES.

Shewing its Nature, Symptoms, Causes, and Treatment, embracing the subject of Epizootic Disease generally. By W. C. Spooner, M.R.V.C. 12mo. pp. 118, 3s. 6d. sewed.

SPOONER.—A TREATISE ON THE STRUCTURE, FUNCTIONS, AND

DISEASES of the FOOT and LEG of the HORSE; comprehending the Comparative Anatomy of these Parts in other Animals; embracing the subject of Shoeing and the proper Treatment of the Foot; with the Rationale and Effects of various important Operations, and the best Methods of performing them. By W. C. Spooner, M.R.V.C. 12mo. pp. 398, 7s. 6d. cloth.

STEBBING.—THE HISTORY OF THE CHRSTIAN CHURCH,

From its Foundation to A.D. 1492. By the Rev. H. Stebbing, M.A., etc. 2 vols. foolscap 8vo. with Vignette Titles, 12s. cloth.

STEBBING.—THE HISTORY OF THE REFORMATION.

By the Rev. H. Stebbing. 2 vols. foolscap 8vo. with Vignette Titles, 12s. cloth.

STEPHENS.—A MANUAL OF BRITISH COLEOPTERA ;

Or, **BEETLES** : containing a Description of all the Species of Beetles hitherto ascertained to inhabit Great Britain and Ireland, etc. With a complete Index of the Genera. By J. F. Stephens, F.L.S., author of "Illustrations of Entomology." 1 vol. post 8vo. 14s. cloth.

STEEL'S SHIPMASTER'S ASSISTANT,

And **OWNER'S MANUAL**; containing Information necessary for persons connected with Mercantile Affairs; consisting of the Regulation Acts of the Customs for the United Kingdom, and British Possessions abroad; Navigation Laws; Registry Acts; Duties of Customs of the United Kingdom, the British Plantations in America, Canada, and Isle of Man; in the East Indies, Cape of Good Hope, New South Wales, and Van Dieman's Land; Smuggling Acts; Pilotage throughout England and Scotland; Insurances; Commercial Treaties; Dock Charges on Shipping, etc. New Edition, corrected by J. Stikeman, Secretary to the East India and China Association. With Tables of Monies, Weights, Measures, and Exchanges. By Dr. Kelly. With a Supplement. 1 vol. 8vo. 17. 1s. cloth.

For Use in the Field. By Thomas Thacker. 1s. 6d. sewed.

THIRLWALL.—THE HISTORY OF GREECE.

By the Right Rev. the Lord Bishop of St. David's. Vols. 1 to 7, foolscap 8vo. with Vignette Titles, 2l. 2s. cloth.

THOMSON'S SEASONS.

Edited by Bolton Corney, Esq. Illustrated with Seventy-seven Designs drawn on Wood by the following Members of the Etching Club:—

J. Bell, Sculptor.	J. C. Horsley.	Frank Stone.	H. J. Townsend,
C. W. Cope.	J. P. Knight.	C. Stonhouse.	T. Webster, A.R.A.
Thomas Creswick.	R. Redgrave, A.R.A.	F. Tayler.	

Engraved by Thompson and other eminent Engravers.

Handsomely printed in square crown 8vo. 1842, pp. 336, 21s. richly bound in ultra-marine cloth; in morocco in the best manner by Hayday, 36s.

* * A few copies printed on prepared paper of great beauty, forming a most unique book, 2l. 2s. in ultra-marine cloth; in morocco in the best manner by Hayday, 2l. 17s.; or in russia, 3l.

"Few works of the class have a fairer prospect of popularity than this new edition of Thomson, illustrated by the members of the Etching Club. Most of the designs are in accordance with the spirit of the author,—some of them beautiful. The landscape vignettes contributed by Mr. Creswick entitle him to a first place as a book illustrator; exhibiting a versatility of talent for which his warmest admirers could hitherto have hardly ventured to give him credit. Mr. F. Tayler is not far behind, as his designs at pp. 11, 12, and 26, will most satisfactorily prove; and he comes one step nearer historical art than Mr. Creswick, in right of his clever management of rustic figures. Messrs. Cope, Horsley, Redgrave, and Bell, with all their true English feeling, and the grace of their conceptions, are a degree more ambitious. Mr. Bell's preparatory outline of 'Spring' gives indications of grace, poetry, and fancy, worthy of being carried to the highest perfection. This book is beautifully brought out; the vignettes are from copper, blocks produced by the electrotype process. This gives a peculiarity of effect to the impressions more easy to perceive than to describe. Other of our classical poems are to follow, illustrated in a similar fashion. Mr. Bolton Corney's labours are not the less to be commended because they are unobtrusive; the work is extremely well edited, and therefore entitled to a place on the library shelf as well as on the drawing-room table."—Athenæum.

THOMSON.—THE DOMESTIC MANAGEMENT OF THE SICK ROOM,

Necessary, in Aid of Medical Treatment, for the Cure of Diseases. By Anthony Todd Thomson, M.D. F.L.S. etc. 1 vol. post 8vo. pp. 518, 10s. 6d. cloth.

"There is no interference with the duties of the medical attendant; but sound, sensible, and clear advice what to do, and how to act, so as to meet unforeseen emergencies, and co-operate with professional skill."—Literary Gazette.

THOMSON.—CHEMISTRY OF ANIMAL BODIES.

By Thomas Thomson, M.D., Regius Professor of Chemistry in the University of Glasgow. 8vo. 15s. cloth.

TOMLINS.—A POPULAR LAW DICTIONARY;

TURNER.—THE SACRED HISTORY OF THE WORLD,

Philosophically considered. By S. Turner, F.S.A. R.A.S.L. New Edit. 3 vols. 8vo. 42s. bds.

Vol. 1 considers the Creation and System of the Earth, and of its Vegetable and Animal Races and Material Laws, and Formation of Mankind.

Vol. 2, the Divine Economy in its special Relation to Mankind, and in the Deluge, and the History of Human Affairs.

Vol. 3, the Provisions for the Perpetuation and Support of the Human Race, the Divine System of our Social Combinations, and the Supernatural History of the World.

TURNER.—A TREATISE ON THE FOOT OF THE HORSE,

And a New System of Shoeing, by One-sided Nailing; and on the Nature, Origin, and Symptoms of the Navicular Joint Lameness, with Preventive and Curative Treatment. By James Turner, M.R.V.C. Royal 8vo. pp. 118, 7s. 6d. boards.

TURTON'S (DR.) MANUAL OF THE LAND AND FRESHWATER SHELLS OF

THE BRITISH ISLANDS. A new Edition, thoroughly revised, and with considerable Additions. By John Edward Gray, Keeper of the Zoological Collection in the British Museum. 1 vol. post 8vo. with Woodcuts, and 12 coloured Plates, 15s. cloth.

URE.—DICTIONARY OF ARTS MANUFACTURES AND MINES;

Containing a clear Exposition of their Principles and Practice. By Andrew Ure, M.D. F.R.S. M.G.S. etc. 1 thick vol. 8vo. illustrated with 1241 Engravings on Wood.—*A New Edition is just ready.*

WALKER.—BRITISH ATLAS OF FORTY-SEVEN MAPS,

CAREFULLY COLOURED; comprising separate Maps of every County in England, each Riding in Yorkshire, and North and South Wales; showing the Roads, Railways, Canals, Parks, Boundaries of Boroughs, Places of Election, Polling Places, etc. Compiled from the Maps of the Board of Ordnance and other Trigonometrical Surveys. By J. and C. Walker. Imperial 4to. coloured, Three Guineas, half-bound; large paper, Four Guineas, half-bound.

. *Each County may be had separately, in case, 2s. 6d.*

WALTZING.—REFORM YOUR WALTZING. THE TRUE THEORY OF THE

RHENISH or SPANISH WALTZ, and of the German Waltz, *à deux Temps*, analysed and explained for the first time. By an Amateur. Foolscap 8vo. uniform with "Hints on Etiquette." Price Half-a-Crown.

The Figure of 8 in both these Waltzes on an entirely new principle.

. *Waltzing is the art of a gentleman, and never yet was taught or understood by a dancing-master.*

"The author of these amusing hints cannot be a more enthusiastic admirer of waltzing than we are. It was a source of enjoyment to us in the land of its legitimate home for many a year in the days of yore; but hélas, ils sont passées les jours de fête! we are now too old and rheumatic to be able to indulge in such pastimes. Those of our readers, however, who are younger and more active than ourselves, and who wish to know what real waltzing actually means, cannot do better than benefit by the system laid down and recommended for adoption by 'An Amateur,' whose remarks are well calculated to prove serviceable to the uninitiated."—United Service Gazette.

WARDLAW.—SERMONS.

By Dr. Wardlaw. 8vo. 12s. boards.

WARDLAW.—DISCOURSES ON THE PRINCIPAL POINTS OF THE SOCINIAN

CONTRROVERSY—the Unity of God, and the Trinity of Persons in the Godhead—the Supreme Divinity of Jesus Christ—the Doctrine of the Atonement—the Christian Character, etc. By Ralph Wardlaw, D.D. 5th Edition, 8vo. 15s. cloth.

WATERTON.—ESSAYS ON NATURAL HISTORY,

Chiefly Ornithology. By Charles Waterton, Esq., author of "Wanderings in South America." With an Autobiography of the Author, and a View of Walton Hall. 3d Edition, foolscap 8vo. 8s. cloth.

WATHEN.—ARTS, ANTIQUITIES, AND CHRONOLOGY OF ANCIENT

EGYPT, from Personal Observations in 1839. By G. H. Wathen, Architect. Royal 8vo. with Plates and Woodcuts, from the Author's own Sketches. 16s. cloth.

"A clever and lively contribution to the chronology and arts of ancient Egypt, the result of a professional visit to her land, made by an enthusiastic student of her history, well qualified to explore her remains."—Spectator.

WESTWOOD.—INTRODUCTION TO THE MODERN CLASSIFICATION OF

INSECTS; comprising an Account of the Habits and Transformations of the different Families; a Synopsis of all the British, and a Notice of the more remarkable Foreign Genera. By J. O. Westwood, Sec. Ent. Soc. London, F.L.S., etc. 2 vols. illustrated with above 150 Woodcuts, comprising about 2500 distinct Figures, 2l. 7s. cloth.

WHITE'S COMPENDIUM OF THE VETERINARY ART;

Containing Plain and Concise Observations on the Construction and Management of the Stable; a brief and popular Outline of the Structure and Economy of the Horse; the Nature, Symptoms, and Treatment of the Diseases and Accidents to which the Horse is liable; the best Method of performing various Important Operations; with Advice to the Purchasers of Horses; and a copious Materia Medica and Pharmacopœia. 17th edition, entirely reconstructed, with considerable Additions and Alterations, bringing the work up to the present state of Veterinary Science. By W. C. Spooner, Vet. Surgeon, etc. etc. 8vo. pp. 588, with coloured Plate, 16s. cloth. London, 1842.

WHITE'S COMPENDIUM OF CATTLE MEDICINE;

Or, Practical Observations on the Disorders of Cattle and other Domestic Animals, except the Horse. 6th Edition, re-arranged, with copious Additions and Notes. By W. C. Spooner, Vet. Surgeon, author of a "Treatise on the Influenza," and a "Treatise on the Foot and Leg of the Horse," etc. 8vo. 9s. cloth.
