P R E F A C E .

THE last edition of the Catalogue of this Collection was published in 1839. In 1843 the Author removed from the city of New York to his present residence at Rye, Westchester Co., N. Y., where he has re-arranged the Collection in the same order with this Catalogue. While thus occupied, the opportunity was embraced of compiling this edition by the re-examination of the specimens and their descriptions, without any regard to the last edition.

It will be observed that the Collection has increased more than threefold, which has rendered it necessary to re-number the Catalogue.

This has been achieved, in part, by the liberal contributions of numerous correspondents, and in part by purchase, and chiefly from the collection of Hugh Cuning, Esq., of London. The same systematic arrangement has been followed, modified, however, by the recent discoveries of many of the Mollusca, hitherto unknown.

Most of the modern Genera are introduced in their proper places, and will be found by a reference to the Index.

The Species are arranged for convenience in alphabetical order, to which are added their Varieties, Authors, and Synonymes, as far as it was practicable.

References to figures and descriptions of each species, and of most of the varieties, are given, the Author having especially consulted the recent works on Conchology.

The fourth column contains the numbers of the species, or page of the second edition of Lamarck's Animaux sans Vertèbres, par Monsieur Deshayes, excepting in the Families of the Colimacea and Cyclostomacea, where they show the grouping of the species after the arrangement of Monsieur Louis Pfeiffer. In the Index will be found the names of all the Genera and Families, and also the Synonymes of the Species.

A list of the works on Natural History in the Cabinet is also added, that Correspondents and others may see whether it contains their memoirs, and if not, they will confer a favor by forwarding them in exchange for the Catalogue, or anything else they may designate.

All the Species not enumerated in the Catalogue will be thankfully received (in exchange), provided they are accompanied by a list of "Desiderata."

P R E F A C E .

ACCORDING to promise, I present my correspondents with the first Supplement to my Catalogue. It will be useful to point out the errors in the Catalogue, and will show the additions that have been made to the Cabinet and to the Library. The Genus *Bulla* in the Catalogue proving very incomplete, I have thought it would be better to reprint it in the Supplement. The Genus *Cyrtulus* in the Catalogue must also be erased; the species will be found in their proper place under the Genus *Pyrula*. Several new genera have been added, which will be found on reference to the additional Index in this Supplement.

I return my thanks to my friends and correspondents for their patronage of the Catalogue, and trust that it has proved of value to them: nor can I omit to thank Mons. G. P. Deshayes, M. Petit de la Saussaye of Paris, and Mr. J. H. Redfield of New York, for their handsome notices of it in print.

P R E F A C E

As soon as I received your communication with the first Supplement to my Catalogue, it will be
pleased to point out the error in the Catalogue, and will show the additions that have been made to the Catalogue
and to the Index. The Genus Bulla in the Catalogue having very many mistakes, I have thought it would be
better to remove it in the Supplement. The Genus Cyrtus in the Catalogue must also be removed. The species will
be found in their proper places under the Genus Pyralis. Several new species have been added, which will be found
in reference to the additional Index in this Supplement.

I return my thanks to my friends and correspondents for their assistance in the Catalogue, and trust that it has
proved of value to them; nor can I omit to thank Messrs. A. B. Deshayes, M. de la Guesne, and M. de la Roche, for their valuable notices of it in print.
