THE AUTHORS

GARY G. BROWN is State Forester, Division of Forestry, Montana Department of State Lands, Missoula.

DWANE D. VAN HOOSER is Project Leader, Resources Evaluation Research Work Unit at the Intermountain Forest and Range Experiment Station in Ogden, Utah.

FOREWORD

This report presents the principal findings of the second forest inventory of State and private lands in western Montana (fig. 1). Data collection began in January 1977 and was completed in December 1978. This report does not note changes or trends since the first inventory of Montana. These items will be included in a State Analytical Report to be published in the near future.

The authors gratefully acknowledge the cooperation of the USDA Forest Service, Region 1. Appreciation is also expressed for the cooperation of other public agencies and private landowners in providing information and access to the sample locations.

SUMMARY

The 16 western Montana counties contain 3.7 million acres of commercial timberland in State and private ownership. These acres support 5.9 billion cubic feet of growing stock and more than 21.1 billion board feet of sawtimber. In 1976, the inventory increased nearly 130 million cubic feet after deducting 28.7 million cubic feet of mortality and some 125.6 million cubic feet of removals. Additional information on total land area, commercial timberland area, timber inventory, growth, and mortality data based on USDA Forest Service Resources Evaluation standards are presented.

FOREST AREA AND TIMBER RESOURCE STATISTICS FOR STATE AND PRIVATE LANDS IN WESTERN MONTANA COUNTIES 1977

MONTANA

Figure 1.--Western Montana Counties; shaded portion represents area covered by this report.

HIGHLIGHTS

Area

- State and private lands account for 10.5 million acres, nearly 41 percent of the total land area in western Montana (fig. 2).
- Forests occupy 3.7 million acres, including reserved land, 35 percent of the total State and private land area in western Montana.
- Of the forest land, 3.6 million acres, 98 percent, are classified as commercial timberland.

Figure 2.--Percent of total land area in western Montana by ownership, 1977 (shaded area represents sampled land).

- Private ownership accounts for 3.1 million acres, 84 percent of the commercial timberland.
- Douglas-fir is the predominant forest type on nearly half of the commercial timberland area. Lodgepole pine and ponderosa pine forest types together occupy about 30 percent of the commercial timberland.
- One-half the commercial timberland is in the 50- to 84-cubic foot productivity class.
- On the average, the commercial timberland is currently producing only about half its annual potential of 70 cubic feet/acre.
- About 30 percent of the commercial timberland is in old-growth stands.
- Stands that are fully stocked occupy about 30 percent of the commercial timberland.
- Some 46 percent of the commercial timberland is contained in only 3 of the 16 western Montana counties, namely Missoula, Flathead, and Lincoln.

Inventory

- Growing stock volume amounts to 5.9 billion cubic feet and sawtimber volume totals 21.2 billion board feet.¹
- An additional 395 million cubic feet of sound wood volume is contained in rough, rotten, and salvable dead trees.
- The most dominant single species-- Douglas-fir (Pseudotsuga menziesii [Mirb.] Franco)-- constitutes 2.2 billion cubic feet of growing stock and some 8 billion board feet of sawtimber.
- Forest industry controls 44 percent of the total growing stock and 46 percent of the sawtimber volume.
- Nearly 70 percent of the trees over 5.0 inches d.b.h. are poletimber size.
- But, nearly three-quarters of the growing stock volume is contained in sawtimber stands.
- Two-thirds of the growing stock volume is contained in stands dominated by either Douglas-fir or lodgepole pine.
- Flathead and Missoula counties combined account for more than one-third of the growing stock and sawtimber volume.

Components of Change

- Net annual growth amounted to 129.9 million cubic feet of growing stock and 461.6 million board feet of sawtimber.
- The annual mortality of 28.7 million cubic feet offsets 18 percent of total annual growth of growing stock.
- Mortality reduced the annual sawtimber increment by 89.7 million board feet--16 percent.
- Total removals from growing stock equaled 125.6 million cubic feet. This represents 2.1 percent of the standing inventory and 96.7 percent of the net annual growth.
- Removals from sawtimber amounted to 804.9 million board feet or 3.8 percent of standing inventory and 174.4 percent of net annual growth.

HOW THE INVENTORY WAS CONDUCTED

The inventory was designed to provide reliable statistics primarily at the State and study-area levels. Procedures were as follows:

1. Initial area estimates were based on the classification of 84,795 sample points systematically placed on the latest resource aerial photography available. The sample points were summarized and grouped into strata for subsequent field sampling. The photo points, adjusted to meet known land areas, were used to compute area expansion factors for the field samples.

2. Land classification and estimates of timber characteristics and volume were based on observations and measurements recorded at 2,512 ground sample locations. Sample trees were selected using a 10-point cluster that includes fixed plots (1/300 acre) for trees less than 5.0 inches diameter at breast height (d.b.h.) and variable plots (40 basal area factor) for trees 5.0 inches d.b.h. or larger.

¹In this report all reference to sawtimber volume is in International 1/4-inch rule.

3. For most species, volume and defect were computed using Kemp's equations.

4. All photo and field data were sent to Ogden, Utah, for processing. Final estimates were based on computer generated statistical summaries of the data.

DATA RELIABILITY

Individual cells within tables should be used with caution. Some are based on very small sample sizes, and so may result in a high standard error. The standard error percents shown in tables 1 and 2 were calculated at the 67 percent confidence level.

Table 1.--Area of State and private forest land in western Montana with percent standard error, 1977

Item	Softwoods		Hardwoods		All types	
	Acres	Percent standard error	Acres	Percent standard error	Acres	Percent standard error
Commercial timberland	3,532,017	±0.7	112,246	±10.4	3,644,263	±0.7
Productive reserved ¹	7,338		341		7,679	
Other forest land:						
Unproductive reserved ¹	1,683		120		1,803	
Unproductive nonreserved	65,973	±11.3	17,351	±24.1	83,324	±10.1

Table 2.--Net volume, net annual growth, and annual mortality of growing stock and sawtimber on State and private commercial timberland in western Montana with percent standard error

Item	Softwoods		Hardwoods		All species	
	Volume	Percent standard error	Volume	Percent standard error	Volume	Percent standard error
Net volume, 1977:						
Growing stock (M cubic feet)	5,773,036	±1.7	175,279	±10.9	5,948,315	±1.6
Sawtimber (M board feet)	20,634,733	±2.1	526,570	±12.9	21,161,303	±2.0
Net annual growth, 1976:						
Growing stock (M cubic feet)	125,815	±3.0	4,118	±11.8	129,933	±3.0
Sawtimber (M board feet)	443,650	±3.3	17,976	±19.2	461,626	±3.2
Annual mortality, 1976:						
Growing stock (M cubic feet)	28,020	±6.0	663	±34.2	28,683	±5.9
Sawtimber (M board feet)	87,701	±8.2	2,018	±50.1	89,719	±8.1

¹Reserved land areas are estimated from aerial photos without field verification; therefore, standard errors are not calculated.

TERMINOLOGY AND DATA TABLES

The following section contains definitions that are relevant to the timber resource data presented in this resource bulletin.

TERMINOLOGY

Land

Bureau of the Census.--Area of dry land and land temporarily or partly covered by water, such as marshes, swamps, and river flood plains; streams, sloughs, estuaries, and canals less than 1/8 of a statute mile in width; and lakes, reservoirs, and ponds less than 40 acres in area.

Resources Evaluation.--The same as the Bureau of the Census except minimum width of streams, etc., is 120 feet, and minimum size of lakes, etc., is 1 acre.

Water

Bureau of the Census.--Streams, sloughs, estuaries, and canals more than 1/8 of a statute mile in width; and lakes, reservoirs, and ponds more than 40 acres in area.

Resources Evaluation.--The same as the Bureau of the Census except minimum width of streams, etc., is 120 feet, and minimum size of lakes, etc., is 1 acre.

Land Use Classes

Forest land.--Land at least 10.0 percent stocked by forest trees of any size, or formerly having had such tree cover, and not currently developed for nonforest use.

Commercial timberland.--Forest land producing or capable of producing crops of industrial wood and not withdrawn from timber utilization. (Areas qualifying have the capability of producing in excess of 20 cubic feet per acre per year of industrial wood in natural stands. Currently inaccessible and inoperable areas are included.)

Productive-reserved forest land.--Forest land sufficiently productive to qualify as commercial timberland, but withdrawn from timber utilization through statute, administrative designation, or exclusive use for Christmas tree production.

Other forest land.--Forest land incapable of producing 20 cubic feet per acre per year of industrial wood in natural stands because of adverse site conditions; includes both reserved and nonreserved forest land.

Nonforest land.--Land that has never supported forests and lands formerly forested where use for timber management is precluded by development for other uses.

Public Ownership Classes

National Forest lands.--Federal lands legally designated as National Forest or purchase units and other lands under the administration of the Forest Service, including experimental areas and Bankhead-Jones Title III lands.

Bureau of Land Management lands.--Federal lands administered by the Bureau of Land Management.

Miscellaneous Federal lands.--Federal lands other than the following: (1) National Forest lands; (2) lands administered by the Bureau of Land Management; and (3) Indian trust lands.

Indian trust lands.--Indian lands held in trust by the Federal Government, for Indian tribal groups or for individual allotments.

State lands.--Lands owned by States or lands leased to these governmental units for 50 years or more.

County and municipal lands.--Lands owned by counties and local public agencies or municipalities, or lands leased to these governmental units for 50 years or more.

Private Ownership Classes

Forest industry lands.--Lands owned by companies or by individuals operating wood-processing plants.

Farmer-owned lands.--Lands owned by farm operators. (These exclude lands leased by farm operators from such nonfarm owners as railroad companies and States.)

Other private lands.--Privately owned lands other than forest industry and farmer-owned lands.

Forest Type and Tree Species

Forest types.--A classification of forest land based upon the species forming a plurality of live-tree stocking.

Forest trees.--Woody plants having a well-developed stem and usually more than 12 feet in height at maturity.

Commercial species.--Tree species presently or prospectively suitable for industrial wood products.

Softwoods.--Monocotyledonous trees, usually evergreen, having needles or scalelike leaves.

Hardwoods.--Dicotyledonous trees, usually broad-leaved and deciduous.

Area Condition Classes

Stocking.--Stocking is an expression of the extent to which growing space is effectively utilized by present or potential growing stock trees of commercial species. "Percent of stocking" is synonymous with "percentage of growing space occupied" and means the ratio of actual stocking to full stocking for comparable sites and stands. Basal area is used as a basis for measuring stocking.

"Stocking percentages" express current area occupancy in relation to specified standards for full stocking based on number, size, and spacing of trees considered necessary to fully utilize the forest land.

Full utilization of the site is assumed to occur over a range of basal area. As an interim guide, 60 percent of the normal yield table values has been used to establish the lower limit of this range, which represents full-site occupancy. This is called 100-percent stocking. The upper limit of full stocking has been set at 132 percent. Sites with less than 100-percent stocking represent less than full-site occupancy. Overstocking is characterized by sites with 133 percent or more stocking.

Class 10.--Areas fully stocked (100 to 132 percent) with desirable trees and not overstocked (133 percent or more).

Class 20.--Areas fully stocked with desirable trees, but overstocked with all live trees.

Class 30.--Areas medium to fully stocked (60 to 99 percent) with desirable trees and with less than 30 percent of the area controlled by other trees and/or inhibiting vegetation or surface conditions that will prevent occupancy by desirable trees.

Class 40.--Areas medium to fully stocked with desirable trees and with 30 percent or more of the area controlled by other trees and/or conditions that ordinarily prevent occupancy by desirable trees.

Class 50.--Areas poorly stocked (16.7 to 59 percent) with desirable trees, but fully stocked with growing stock trees.

Class 60.--Areas poorly stocked with desirable trees, but with medium to full stocking of growing stock trees.

Class 70.--Areas nonstocked (less than 16.7 percent) or poorly stocked with desirable trees, and poorly stocked with growing stock trees.

Class 80.--Low-risk old-growth stands.

Class 90.--High-risk old-growth stands.

Nonstocked.--Areas less than 16.7 percent stocked with growing stock trees.

Productivity

Productivity class.--A classification of forest land in terms of potential growth in cubic feet of fully stocked natural stands.

Stand-Size Classes

Sawtimber stands.--Stands at least 16.7 percent stocked with growing stock trees, with half or more of total stocking in sawtimber or poletimber trees, and with sawtimber stocking at least equal to poletimber stocking.

Poletimber stands.--Stands at least 16.7 percent stocked with growing stock trees in which half or more of this stocking is in poletimber and/or sawtimber trees, and with poletimber stocking exceeding that of sawtimber.

Sapling-seedling stands.--Stands at least 16.7 percent stocked with growing stock trees in which more than half of the stocking is saplings and/or seedlings.

Nonstocked land.--Commercial timberland less than 16.7 percent stocked with growing stock trees.

Class of Timber

Growing stock trees.--Live trees of commercial species qualifying as desirable or acceptable trees. (Excludes rough, rotten, and dead trees.)

Desirable trees.--Growing stock trees (1) having no serious defect in quality to limit present or prospective use for timber products; (2) of relatively high vigor; and (3) containing no pathogens that may result in death or serious deterioration before rotation age.

Acceptable trees.--Growing stock trees meeting specified standards of size and quality, but not qualifying as desirable trees.

Rough trees.--(1) Live trees that do not contain at least one 12-foot saw log or two noncontiguous saw logs, each 8 feet long or longer, now or prospectively, and/or do not meet Rocky Mountain regional specifications for freedom from defect primarily because of roughness or poor form; and (2) all live trees of noncommercial species.

Rotten trees.--Live trees that do not contain at least one 12-foot saw log or two noncontiguous saw logs, each 8 feet long or longer, now or prospectively, and/or do not meet Rocky Mountain regional specifications for freedom from defect primarily because of rot; that is, when more than 50 percent of the cull volume (cubic-foot basis) in a tree is rotten.

Salvable dead trees.--Standing or down dead trees that are considered merchantable by Rocky Mountain regional standards.

Saw-log portion.--That part of the bole of sawtimber trees between the stump and the saw-log top. A 1-foot stump is used.

Upper-stem portion.--That part of the bole of sawtimber trees above the saw-log top to a minimum top diameter of 4.0 inches outside bark or to the point where the central stem breaks into limbs, whichever occurs first.

Tree Size Classes

Seedlings.--Live trees less than 1.0 inch in d.b.h.

Saplings.--Trees 1.0 to 4.9 inches in d.b.h.

Poletimber trees.--Trees at least 5.0 inches in d.b.h., but smaller than sawtimber size.

Sawtimber trees.--Trees exceeding poletimber size. In the Intermountain States, the minimum d.b.h. for softwood sawtimber is 9.0 inches and for hardwoods 11.0 inches.

Volume

Cull volume.--Portions of a tree's volume that are not usable for industrial wood products because of rot, form, or other defect.

Net volume.--Gross volume less deductions for cull.

Growing stock volume.--Net volume in cubic feet of live sawtimber trees and live poletimber trees from stump to a minimum 4.0-inch top (of central stem) outside bark. Net volume equals gross volume less deduction for rot and missing bole sections.

Sawtimber volume.--Net volume in board feet of sawtimber trees of commercial species. Net volume equals gross volume less deduction for rot, sweep, crook, and other defects that affect use for lumber.

Components of Change

Net annual growth.--The increase in net growing stock or sawtimber volume of a specified size class for a specific year. (Components of net annual growth include the increment in net volume of trees at the beginning of the specific year surviving to its end, plus the net volume of trees reaching the size class during the year, minus the net volume of trees that died during the year, minus the net volume of trees that became rough or rotten trees during the year.)

Mortality.--Number or sound-wood volume of growing stock trees dying from natural causes during a specified period, usually annually.

Removals.--The net volume of growing-stock or sawtimber trees removed from the inventory by harvesting; cultural operations, such as timber stand improvement; land clearings; or changes in land use. Includes the unused portion of growing stock or sawtimber trees cut or killed by logging.

¹Forest industry is a component of private ownership, but because of its importance to the western Montana timber supply situation, area and resource statistics for forest industry are shown separately in this and other tables dealing with owner groups in this report.

²On this and all following tables, the private ownership category includes farmer-owned and other private ownerships, a small acreage of county and municipal ownership, and miscellaneous Federal ownership excluding National Park Service lands.

³U.S. Bureau of the Census, land and water area of the United States, 1980.

THE HISTORY OF THE CITY OF BOSTON

CHAPTER I.	
1630	First settlement of the city of Boston.
1631	First meeting of the town.
1632	First meeting of the court.
1633	First meeting of the assembly.
1634	First meeting of the council.
1635	First meeting of the senate.
1636	First meeting of the house of representatives.
1637	First meeting of the court of common pleas.
1638	First meeting of the court of criminal sessions.
1639	First meeting of the court of chancery.
1640	First meeting of the court of admiralty.
1641	First meeting of the court of exchequer.
1642	First meeting of the court of king's bench.
1643	First meeting of the court of queen's bench.
1644	First meeting of the court of common law.
1645	First meeting of the court of equity.
1646	First meeting of the court of equity and common law.
1647	First meeting of the court of equity and common law.
1648	First meeting of the court of equity and common law.
1649	First meeting of the court of equity and common law.
1650	First meeting of the court of equity and common law.
1651	First meeting of the court of equity and common law.
1652	First meeting of the court of equity and common law.
1653	First meeting of the court of equity and common law.
1654	First meeting of the court of equity and common law.
1655	First meeting of the court of equity and common law.
1656	First meeting of the court of equity and common law.
1657	First meeting of the court of equity and common law.
1658	First meeting of the court of equity and common law.
1659	First meeting of the court of equity and common law.
1660	First meeting of the court of equity and common law.
1661	First meeting of the court of equity and common law.
1662	First meeting of the court of equity and common law.
1663	First meeting of the court of equity and common law.
1664	First meeting of the court of equity and common law.
1665	First meeting of the court of equity and common law.
1666	First meeting of the court of equity and common law.
1667	First meeting of the court of equity and common law.
1668	First meeting of the court of equity and common law.
1669	First meeting of the court of equity and common law.
1670	First meeting of the court of equity and common law.
1671	First meeting of the court of equity and common law.
1672	First meeting of the court of equity and common law.
1673	First meeting of the court of equity and common law.
1674	First meeting of the court of equity and common law.
1675	First meeting of the court of equity and common law.
1676	First meeting of the court of equity and common law.
1677	First meeting of the court of equity and common law.
1678	First meeting of the court of equity and common law.
1679	First meeting of the court of equity and common law.
1680	First meeting of the court of equity and common law.
1681	First meeting of the court of equity and common law.
1682	First meeting of the court of equity and common law.
1683	First meeting of the court of equity and common law.
1684	First meeting of the court of equity and common law.
1685	First meeting of the court of equity and common law.
1686	First meeting of the court of equity and common law.
1687	First meeting of the court of equity and common law.
1688	First meeting of the court of equity and common law.
1689	First meeting of the court of equity and common law.
1690	First meeting of the court of equity and common law.
1691	First meeting of the court of equity and common law.
1692	First meeting of the court of equity and common law.
1693	First meeting of the court of equity and common law.
1694	First meeting of the court of equity and common law.
1695	First meeting of the court of equity and common law.
1696	First meeting of the court of equity and common law.
1697	First meeting of the court of equity and common law.
1698	First meeting of the court of equity and common law.
1699	First meeting of the court of equity and common law.
1700	First meeting of the court of equity and common law.
