INTRODUCTION

The monthly and yearly mean and extreme surface water temperatures given on the following pages are obtained from observations made through 1946. The data were recorded principally at tide stations maintained by the U. S. Coast and Geodetic Survey along the Atlantic and Gulf coasts of the United States and in Greenland and Bermuda. There are also included monthly mean and extreme temperatures for Balboa and Cristobal which were furnished by the Department of Operation and Maintenance, The Panama Canal.

The daily temperature observations are taken at whatever time the tide observer services the tide gage. The visits are usually made during daylight hours, and it may be assumed that in the course of a year the distribution of the observations is fairly uniform over all phases of the tide. The water samples are drawn with a bucket from near the surface and may be regarded as representative of the first one or two feet of water. Thermometer readings are made in the bucket immediately after the sample has been drawn and before it has become affected appreciably by the temperature of the surrounding air. When ice has prevented the observation of water temperatures at some North Atlantic stations, temperatures based on the freezing point of water at each station have been inferred and used in computing monthly means.

Recording thermometers, recently installed at a few stations, give continuous records of the temperatures of the water a foot or two below extreme low water.

An expectancy range table is included for each station for which there are five or more years of observations. The table shows the percentage of the individual temperature readings which agree with the monthly means within the indicated limits. Graphs showing mean temperature variations during the month and year and monthly extreme temperatures are also included for these places. The unusual shape of the temperature curve for Daytona Beach reflects the upwelling which occurs along this section of the coast during the summer months.

All temperatures in this publication are given in degrees Fahrenheit. A table for converting into degrees centigrade is provided on the inside back cover.

The following publications complete this series and may be obtained from the Director, U. S. Coast and Geodetic Survey, Washington (25), D. C.:

- TW-2. Surface Water Temperatures, Pacific Coast.
- DW-1. Density of Sea Water, Atlantic and Gulf Coasts.
- DW-2. Density of Sea Water, Pacific Ocean.

* Means and extremes are from 39 years (1908-1946) of bihourly readings of recording thermometers. The values were furnished by the Department of Operation and Maintenance, The Panama Canal.

Surface Water Mean Temperature Curves

The mean temperatures in degrees Fahrenheit of the surface water during the month and year are shown by the solid lines. The dots indicate the maximum and minimum temperatures observed each month.
