Universi, quod Graeci τὸ σπουδαιότερον appellarunt, attentamente omnes considerare partes, imo minimas atque obscurissimas animo velle indagare, plane furor esset, atque ultra humanas foret vires; ideo ut Oceanum illum Naturae tuto pernavigent Philosophi, in varias partes haud irritò successu vastum illum distribuere campum Naturae Consulti, Astrorum indagationem Astronomis, Terrarum Mariumque notitiam Geographis, Atmosphæram, Corporibusque insitas Vires Physicis, Corporum vero Naturalium notitiam Historiae Naturalis Cultoribus committentes: atque, prout Subiecta Naturae diversa sunt, ita & Curiosi diversa adquirunt cognomenta, videlicet Lithologorum, Botanicorum, vel Zoologorum.

Lithologi Lapidum Regnum, haec quasi Orbis terrarum constituens, examinant, cui superinductum Vegetabilis Regni tegmen Botanici investigant, Viventia vero utrisque inspersa diligenter considerant Zoologi.

Quis tantam trium scil. Regnorum Incolarum inter se dispersorum; invicemque sibi opem ferentium copiam non miratur? Quis tanti animi est, ut tot diversas rerum nationes, quibus in peregrinatione physica obviam venit attentus Speculator, ordine & ad suas proprias familias reducat? Quis, dico, tam constans atque prudens est, ut in Ariadneis Naturae filis ac labyrinthis sine errore vegetetur, nec quandoque quid pro quo veri devious accipiat? Nemo enim Mortalium tanta gaudet perspicacitate, nisi a Naturae Conditore ipso instructus sit, atque exinde omnium objectorum veros & proprios characteres distincte dinoscatur.

Nihilominus tamen, quamvis plurima obsint impedimenta, Herculæo animo ut pertractetur Historia Naturalis, necesse est, quum ex illo amplissimo fonte singula profluant, quibus ad Nutrimentum, Integumentum, Medicamina, Arma idoneis, Oeconomiam, Mercaturam necessariis, & ad profusam Luxuriam Libidinemque ne dicam

alendis, Homines utuntur, sed quod & maximum est, quibus Divinam Potentiam, Majestatem, Bonitatem atque Providentiam luculenter perspicimus, atque venerari cogimur.

Pro diverso, quem spectant Eruditi, scopo, Naturae Producta diversimode tractare consuevere atque illa describere; hinc tanta Librorum orta farrago, qua obruitur Naturae indagator, ut scire plane nequeat, utrum rem, quam considerandam sibi proposuit, alii jam pertractarint nec ne.

Incitantibus igitur Doctissimis sane Viris, ab hoc perquam tædioso licet labore abhorrerem, vacuum tamen a reliquis negotiis tempus impendere non dubitavi in conscribendo hocce Elencho, in quo exhibentur omnes, quatenus indagari poterant, Tractatus Animale, (solum Homine excepto), Lapideumque Regnum illustrantes. Hoc duce Rerum Naturalium Curiosum Rem Lithologicam vel Zoologicam perferutandi cupidi at incerti ac nescii, quinam Auctores de ea egerint, ducuntur ad obtinendum scopum. Nec in malam mihi imputet partem B. L., si nonnulla Opera in hoc Catalogo omissa fuisse observaverit, supplere enim hoc opus per Auctuaria animum induxi meum, quotiescunque justum &, qui typis exaretur, dignum numerum de Animali & Lapideo Regno Scriptorum vel ipse nactus fuero, vel Clarissimorum Virorum, quorum amicitia ac favore frui mihi contigit, humanitas mihi ministrabit.

Ne miretur quis, Vegetabilis Regni Scriptores silentio me praeteriisse; Horum enim locupletissimos exhibuere SEGUIERIUS atque LINNAEUS catalogos.

Ceterum in eligenda methodo, juxta quam Scriptores recenserem, mihi aliquamdiu aquam haesisse ingenue fateor: tandem vero mihi optimum visum fuit talem adhibere, quae Auctorum Nomina secundum ordinem elementorum, & editos ab illis Tractatus secundum impressionis annos enumerat, praesertim si Index materialium Alphabeticus ad calcem, ut a me factum est, subjungatur.

Interea scias velim Benevole Lector, istos me, quos ipse perlustravi, hoc signo () notasse, iis vero, quos mihi suppeditarit singularis Favorum meorum atque Amicorum benevolentia, illud (†) praefixisse. De eorum autem descriptionibus, quibus nullum adpositum est signum, judicent Autoptae, quam illos necdum oculis meis usurpare mihi contigerit.*

Opera, quibus usus fui in hac Bibliotheca compilanda, subsequens indicabit Pagina.

Lithographiae Wirceburgensis ducentis Lapidum Figuratorum a potiori Insecti formium prodigiolis imaginibus exornatae, Specimen primum: resp. Georg. Ludov. Hueber.

— * Wirceburgi 1726. in fol. cum tab. aen.

Quicumque in hoc opere Insecti-formes Lapides repraesentantur, & tanquam Naturales & Petrefacti describuntur, mere sunt factitii & spurii; atque monendi Tirones, Naturalis Scientiae haud satis gnaros, gratia, haud inutile erit, si totum rei navigium brevi hic subjungam. BERINGERUS Professor Herbipolensis multum temporis in perquirendis undique Petrefactis Rebus consumebat; Jesuitae ei infesti imagines multorum Insectorum, Ranarum, Bufonum, Lacertarum, Papilionum, Avicularum variarumque rerum, quae in lapideam materiem conversae nunquam reperiuntur, lapidibus insculpi curabant & circum Herbipolim sub terra recondabant. Sagacem rerum harum Venatorem Beringerum hae res haud diu latebant. Quantum ex ipsarum nunquam antea visarum rerum gaudium! quanta voluptas! Aere exprimi jubet, ipse descriptiones parat. Tandem Monachi rationem qua res peracta est, & artificia, quibus ad Beringerum decipiendum usi fuerunt, divulgant. Vide J. D. HANN Serm. Acad. p. 27.

Historia Aethiopica, sive brevis & succincta descriptio Regni Habessinorum, quod vulgo male Presbyteri Johannis vocatur, in qua libris quatuor agitur 1°. de natura & indole Regionis & Incolarum. 11°. de regimine politico, Regum successione, &c. 111°. de status Ecclesiastici initio, & progressu religionis Christianae, &c. 1v°. de rebus privatis, Litteratura, Oeconomia, &c. cum tabulis capitum & indicibus necessariis.

- * Francofurti ad Moenum 1681. in folio cum tab. aeneis.

Inter alia notatu digna nostrum scopum spectantia, hac summaria sunt. Lib. i. cap. vii agit de Metallis atque Mineralibus, praesertim de Sale fossili & Stibio, quibus oculos in Oriente tingunt. Cap. x. de Animalibus Quadrupedibus, praesertim de Taurelephantibus, jure hospitii Elephantorum, Animal (Zecora) pulcre natura picto, de Unicornu &c. Cap. xi. de Amphibiis Aquatilibus, qua occasione de Hippopotamo, qui est Jobi Behemoth, & Crocodylo qui est Lacerta aquatica miri roboris: de Torpedine naturae stupendae. Cap. xii. de Avibus, praesertim de Casuario, & Pipi, quae venatoribus feras ponit; de Anseribus domesticis eorumque Pastoribus. Cap. xiii de Serpentibus & Insectis; ubi de Boa, Salamandra, Hydris atque Chersydris venenatissimis, nec non de Locustis, cibo S. Johannis Baptistae, atque de Formicis mirabilis naturae. Tabulis item satis nitidis exhibentur Oves longi- & laticaudae, Elephantes, Simiae atque Hippopotamus.

Ad suam historiam Aethiopicam ante hac editam Commentarius, in quo multa breviter dicta fusius narrantur; contraria refelluntur; atque hac occasione praeter res Aethiopicas multa Auctorum, quaedam etiam S. Scripturae loca declarantur, aliaeque plurima Geographica, Historica, & Critica imprimis antiquitatem ecclesiasticam illustrantia, alibi haud facile obvia, exponuntur; ut variarum observationum loco haberi possit.

- * Francofurti ad Moenum 1691. in folio cum tab. aeneis.

Praeter plurimas curiosissimasque observationes p. 104 agitur de monte immenso Lamalinono. p. 105 de rupibus praeruptis atque de Auro Aethiopiae; de Metallis, Mineralibus, Sale, Cohole seu Stibio Aethiopiae. p. 137 de Planta Asi-

Sibbaldus irridetur, quod res ab eo describantur, quas ipse in dubium trahit, utrum in Scotia reperirentur, nec ne. p. 17 Clare demonstratur Sibbaldum Botanices plane inscium fuisse. De reliquis erroribus Sibbaldi satis jocosè ratiocinatur noster Pitcarnius. Ad calcem subjunxit orationem, qua ostenditur Medicinam ab omni Philosophorum Secta esse liberam, & exemplo docetur, quantum utilitatem Matheos Medicis afferre possit, habita Lugd. Batav. 26. — * Londini 1756. in 4^o. *cum* tab. xvi. aeneis.

Post datam Halepensis Urbis circumjacentisque territorii topographiam, enumerantur a pag. 16 usque ad 47 Plantae usuales & inutiles: a pag. 47 usque ad 50 Lapidum regnum examinatur, cujus summaria haec sunt; In Halepensi territorio nulla effodiuntur Metalla; Rupes attamen Ferri aliquid continere colore suo indicant. Argilla, quae ibi effoditur, perquam fragilis est atque ferme inutilis. Tubuli tabaccarii ex Argilla Damascenica & Sydonica conficiuntur. Argillâ utuntur Turci in balneis loco saponis; haec (in loco sex borarum ab urbe distante) effoditur atque rosarum foliis miscetur ut suavem acquirat odorem. Aedificia ex Lapidibus cinereis, ubique circum circa urbem sufficienti quantitate reperundis, extruuntur. Marmora petuntur Damasci, Antiöchiaë, atque Killi. Canales aquam per urbem ducentes ex Gypso, quod haud longe ab urbe colligitur, construuntur: tandemque a pag. 51 usque ad 77 explanatur Regnum bujus loci Animale, nitidisque iconibus plurima incognita illustrantur: Hisce ad calcem accedunt Observata Oeconomica, Medica, atque Physica ibidem facta.
