The copy filmed here has been reproduced thanks to the generosity of:

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol ➡ (meaning "CONTINUED"), or the symbol ▼ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole ➡ signifie "A SUIVRE", le symbole ▼ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

VIII.—THE FLORA OF NEWFOUNDLAND, LABRADOR, and ST.
PIERRE ET MIQUELON: PART III. —BY THE REV. ARTHUR
C. WAGHORSE, *Bay of Islands, Newfoundland.*

(Read May 9th, 1898.)

A change of residence, and the charge of a new and extensive parish, are the hindrances which are chiefly accountable for the delay in the continuance of this series of papers, of which the first part appeared in the *Transactions* of the Institute Vol. VIII (Ser. 2, Vol. I.), page 359; and the second part in Vol. IX (Ser. 2, Vol. II.), page 17.

To the prefatory remarks of the two preceding papers, a few notes should here be added:—

1. The Part I. here first presented is made up of Polypetalous plants which have been added to our Newfoundland or Labrador lists of plants since 1895.

2. These have been obtained from three sources, chiefly:—

(a) Professor Macoun's *Contributions from the Herbarium of the Geological Survey of Canada*, (Parts I.—VI.): these are indicated herein briefly as "C. H. Geo. S. of C."

(b) A list of Newfoundland plants collected by Mr. A. B. Bullman, B. A. Sc. (of H. M. Newfoundland Survey). The plants were collected by him on the West coast in 1896, and in White Bay in 1897. This gentleman modestly says that he lays no claim to be a botanist, so that his determinations may be subject to revision, a fate which befalls even those of men who *are* botanists. If Mr. Bullman's decisions are sustained as to certain plants, his list adds fifteen names to our flora.

(c) My own collections since 1895 in the Bay of Islands, and a week while in Bay St. George, and a trip across the country in 1895, and to Brenton and Clole Sound in Bonavista Bay, on the East coast. At Mr. Reid's stone quarry, about 80 miles from the Bay of Islands, on both sides of the railway track, by the

sides of the ponds in the bogs, I was fortunate enough to find, for the first time, the *Schizaea pusilla* Pursh in fair quantity.

3. To the gentlemen who have kindly assisted me in the determination of my plants, I may now add the names of Dr. Wm. Trelease of St. Louis, Dr. B. L. Robinson of Harvard, and Mr. T. V. Coville of Washington.

4. If permitted so to do, I would gladly say that I have been for the last three or four years distributing my plants (including mosses and lichens, the fungi I hope to have ready this coming season) and that I should be glad to hear of any who may desire specimens.
