female example from Flores, in the Oxford Museum. This is mere conjecture; Flores is a long way from India, and the type specimen is too much rubbed for identification: it does not even resemble *breta*, and until we can find a male we cannot be certain it even belongs to the same genus as *breta*. On this rubbed female Warren states he has erected his genus *Psilalcis*; but he has erected his genus on a male, and as the male of *inceptaria* is not known, that species cannot stand as the type of the genus.
