### 41. NEW RECORDS OF FRESHWATER ALGAE FROM KARNATAKA STATE (INDIA)

(With two plates)

#### INTRODUCTION

Exploratory studies on freshwater algae in Karnataka State are mainly from North Kanara (Bharati 1965, 1966), Raichur (Bharati and Bongale 1975), Hassan (Bharati and Hegde 1980), Davanagere (Bongale and Bharati 1980), Shimoga (Bharati and Hegde 1982), Bijapur (Hegde and Bharati 1983), Mysore

(Gurudeva *et al.* 1983) and Dharwad (Hosmani and Bharati 1983) districts. Extensive collections were made from freshwater ponds and lakes in Shimoga District during the years 1978-1980. These samples included 24 algal taxa which are new records to the algal flora of Karnataka State. They also contained two taxa with major variations. A detailed systematic account of these taxa is given in the

present paper. Classification given by Prescott, 1951 is followed for Blue-green and Euglenoid members. Desmids are arranged after Sarma and Khan, 1980. The samples are preserved in 4% formaldehyde solution and are deposited in the Algal Laboratory, P. G. Department of Botany, Karnatak University, Dharwad under the Accession No.'s S. 46; V. 61 to S. 91; V. 157.
