

THE ALESSANDRO FOCARILE COLLECTION OF CARABIDAE (COLEOPTERA).—The main part of my collection of Carabidae (as of 1949) is now in the Museum of Comparative Zoology at Harvard College, Cambridge, Massachusetts, U.S.A. This museum now possesses the types, as listed below, of the ten species and subspecies of *Trechus* described by me in *Bollettino della Società Entomologica Italiana* Vol. LXXIX, 1949, pages 71-79. In some cases I did not select the actual "Tipi" (holotype and allotype) specimens from the type series at the time of description. In these cases I have asked Mr. P. J. Darlington to select and label appropriate specimens from the type series in question. His selections, listed below, I here designate as the holotypes and allotypes of the forms in question. The following types are now in the Museum of Comparative Zoology:

Trechus obtusus lucanus Focarile: original ♂ and ♀ (holo- and allo)types.

Trechus strigipennis valstronae Focarile: ♂ holotype and ♀ allotype from Lago Capezzone, selected by Mr. Darlington from the original type series.

Trechus schatzmayri Focarile: original ♂ and ♀ (holo- and allo)types.

Trechus marianii Focarile: ♂ holotype and ♀ allotype from Cima di Piazzo, selected by Mr. Darlington from the original type series.

Trechus brembanus Focarile: original ♂ (holo)type; and ♀ allotype from Mte. Ponteranica selected by Mr. Darlington from the original type series.

Trechus magistretti Focarile: original ♂ (holo)type; and ♀ allotype from (Pizzo) Presolana selected by Mr. Darlington from the original type series.

Trechus barii Focarile: original ♂ and ♀ (holo- and allo)types.

Trechus barajoni Focarile: original ♂ and ♀ (holo- and allo)types.

Trechus larianus Focarile: original ♂ (holo)type; and ♀ allotype from Passo di Sasso Canale selected from the original type series by Mr. Darlington.

Trechus maritimus pesianus Focarile: original ♂ and ♀ (holo- and allo)types.—ALESSANDRO FOCARILE, Milano, Italy.
