

study. We are grateful to Martin Luff who checked several of our specimens, and supplied information on distribution, Stuart Ball who produced the mapping routine for our figures and Roger Key and Adrian Fowles who read and commented on earlier drafts of the paper.

Aplocnemus pini (Redt.), not *nigricornis* (F.) (Col.: Melyridae) in Epping Forest, Essex.

In the list of Epping Forest Coleoptera by the late F.D. Buck (1955, *Entomologist's mon. Mag.* **91**: 172-192), the rare *A. nigricornis* (p. 184) is given as widely distributed in the area, while there is no mention of the less rare *A. pini*. I have no doubt, however, that this is an error due to the fact that Joy (1932, *Pract. Handb. Brit. Beetles*, **1**: 431) treats our two species as one under the name *nigricornis*. Actually they are quite distinct, as is now universally recognised (cf., for instance, Allen, 1975, *Entomologist's mon. Mag.* **111**: 210). I have found *pini* more than once in Epping Forest and also not far away at Waltham Abbey and Cheshunt but never *nigricornis*, which I have taken only in East Kent (Orlestone Forest, Ham Street).—A.A. ALLEN, 49 Montcalm Road, Charlton, SE7 8QG.
