In this paper the writer has, for convenience, discarded the systematic arrangement of names of genera, under families, and adopted the alphabetical arrangement. It has also seemed best, in view of the threatened revolution in nomenclature, to give the authorities for the scientific names used, as far as these could be conveniently ascertained. In a few instances the Spanish names of species (mainly of the Pacific coast region) have been given, but it has been the writer's intention to insert these only when they are commonly current among English-speaking people as well as among the Mexicans.

**UMBELLIFERÆ.**

*Angelica,* sp., *Aunt Jerichos,* N. E.

*Daucus Carota,* L., *Queen Anne's lace,* somewhat general.

bird's nest, N. J.

lace-flower,¹ Philadelphia, Pa.

¹ In Nebraska the three species above given are often confounded. The word
grama or grama means grass, but in spite of tautology the word grass is usu-
ally added. By many farmers B. oligostachya and B. hirsuta are called buffalo-
grass.
² Farmers call the dead grass in the spring, “old fog.”
³ A “blow-out” is a crater-like cavity in the side of a sand-hill.
⁴ Name given by a few children, some years ago.
⁵ So called because it looks like buffalo-grass, but is worthless.
