Die Pflanzenstoffe.—Wehmer has made readily available the known facts about the plant products (chemicals, drugs, enzymes, etc.) of the phanerogams. The plant families are arranged in the natural order, and under each the genera and species of which we have any chemical knowledge, along with the facts known and citations of literature establishing the facts. On the purely botanical side many facts of distribution are recorded. The work will prove of great value to plant chemists, pharmacists, and plant physiologists. A full index of the chemicals mentioned and a second one of the raw materials and plants greatly enhance the value of the book.—William Crocker.

Micrography of Javanese woods.—The third part of Janssonius' micrography of the woods of Java has appeared, and apparently completes this very laborious work, as it contains a general index to the two volumes. The plan of the work was described in the notice of the first part, and a notice of the second part indicated the further extension of the work. The present part, beginning in the midst of Meliaceae and closing with Moringeae, contains 100 species, the total for the two volumes being 329. Detailed descriptions of the vascular elements of so many species, including lists of reagents, sections, and material in each case, and also references to literature under each species, represent an amount and kind of work that few would care to undertake.—J. M. C.

Prodrome de la Flore Corse.—Notwithstanding the long series of valuable contributions to systematic botany, both floristic and monographic, by which Briquet has enriched scientific literature, it is probable that he is chiefly
