

Jarvis Springs March 4th 1891

Dear Dr. Watson

Your letters have been received and I thank you very much for your information. I do not wish to persecute you with this Fla. stuff and yet I wish very much to be sure that I can properly identify them however. I therefore send you another box —

No. 15 - with small white berries in racemes, shrub 1 to 3 ft high, leaves slightly thickened, on the islands west coast Fla. —

No. 16 Thickened leaves in clusters with fruit + flowers - *Ovary inferior*, 2 celled, calyx + corolla each 4 lobed, stamens on corolla 4, Should be *Styracx* family? but I do not know what it is, low shrub one to three ft. high on island —

No. 17th Shrub 2-5 ft high on the island. On the naked branches are clusters of staminate flowers - 4 or 5 stamens to the flower —
On the branches full of leaves are no flowers

No. 18 Cyperaceae on sea shore

No. 19 Parasite on grass, low shrubs, or everything it touches (*Cuscuta*)

No. 20. Composita of some kind. Leaves slightly thickened. On the sea shore. I am finding many plants which turn their leaves up vertically to the sun, or on the edge by twisting the petiole. This one does this in a most remarkable manner. I want therefore to get its name if I can

I am finding shrubs + trees which imitate the Australian vegetation in this way, in order to prevent a too rapid transpiration, the mangroves, *Sarcocornia* and others all do it —

Very sincerely
W. P. Wilson

Wilson, William P. 1891. "Wilson, William P. Mar. 4, 1891 [to S. Watson]." *Asa Gray correspondence*
