

well, that can under my eye,
and am satisfied about Grandy
which is perhaps the only tree's
of low elevation. Part the great
forest resource of this country
is Douglasia, which I have
grown everywhere at my
front & I used it useful
for almost every thing.

And so you will leave soon
also! A happy journey to you
and to Mr. Gray, to whom please
remember me.

If you drop a few lines
with to San Francisco care
of Ruhl brothers box 1399.

When you see Hooker &
Duston remember me to
them. I have not found time
to write. Will do so to Hooker
when I can tell him about
Labis concolor

Yours ever
J. F. Goldmann

Portland Aug 8th 1880

Dear Gray

nearly two months have
passed so rapidly that I was
today quite surprised that this
letter will reach you only a
short time before you leave
yourself.

My excuse for not writing
must be that I have found
scarcely any time & vent
written to the children and
have mostly confined myself
to that miserable & still
blamed substitute of postals.

I do not know whether you
are informed of our stept.
A few days at Salt Lake,
where we found Jones a good
fellow who will learn and
improve, and largest in
Kinner at Ogden and went
to San Francisco, where

Potany as you know is very unsatisfactory; thence by steamer to Portland and without stopping through the Sound to Victoria and then up Fraser River, where we made the first regular Mountain ascent, near Fort Hope at the angle where the river makes a bend from the North and turning west. We were right among the snows and were gratified in finding several of the Alpine Conifers; among others *Abies amabilis* which is really distinct from *grandis*. I have sent an article with Photographs taken here from Oregon to Dr Masters, found also *Pseudotsuga*, *Maestigia* taken so high up, *Kotschya*, and *albida* (which is not white) evidently distinct from *flexilis*. The lovely *Arbutus*, *Orobanch.*

Back through the Sound to Portland. Up to the Cascades and the Gales, where I passed

alone ascended an isolated hill to Douglas spruce locality, their amenability is splendid. Newberry's figure in the Map is in the main correct.

And here we are ready to leave to-morrow for the South - Coast Range, Cascades and their Shores.

Met Brown here.

Parry left us a week ago to go with Saks and to Mt Adams. I persist, and believe the active life & great (for me great) exertion has a beneficial influence on my health - but find the greatest impediment in my knee which has not entirely got over the effects of the fall 8 months ago.

I have studied the Confine

Engelmann, George. 1880. "Engelmann, George Aug. 8, 1880." *George Engelmann letters to Asa Gray*
