

GEO. ENGELMANN, M. D.

3003 Locust Street.

St. Louis, Mo.,

Jan 23 1872

I get today a *Polygonum* from Acworth, which I had
38 years ago from Lindheimer and think I must have communicated
it to Prof Gray. I had then named it *P. Texanum*. I do not find it
in DC Prod. Sheaths naked, no glands on peduncles, styles 2
stamens 5-6; something intermediate (or perigon
between *Perovskia* and *mitis*, absolutely, with or
on sheaths. Do you know it? What can it be?
- I have put every thing else aside and am finishing
Isotria first of all. -

Yours truly

GE
